JULY-DEC
1925

THE BUILDERS

N : ILLUSTRATED : WEEKLY
JOURNAL : FOR : THE :
ARCHITECT : AND :
CONSTRUCTOR.

"EVERY man's proper mansion-house, and home, being the theater of his hospitality, the seat of self-fruit, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned." ■ ■ ■ ■ ■

"Architecture can want no commendation, where there are noble men, or noble mindes."

—SIR HENRY WOTTON.

"OUR English word TO BUILD is the Anglo-Saxon Bylsan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY. ■ ■ ■ ■ ■

"ALWAYS be ready to speak your mind, and a base man will avoid you."—WILLIAM BLAKE. ■ ■

OFFICE: CATHERINE ST. STRAND LONDON W.C.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXIX.—No. 4,200

JULY 3, 1925

CRAFTSMANSHIP AND ADVOCACY—II

FORCE of circumstances has combined to create in architecture what Mr. Marriott terms "the illusion of detachment from materials." The architect, who is generally an enthusiast upon craftsmanship, often forgets that he must take a considerable share of the blame for the injury to the craftsman as a human being by depriving him of initiative, but a much more serious complication comes into architecture when the craftsman himself develops the illusion of detachment from materials. Where there are illusions about the fundamental duty involved in work, we must not be surprised at the further detachment.

The tendency of craftsmen to-day is to organise, and whatever their ideals may be the policy takes the form of collective action on official lines. Obviously a time must come when only the permanent officials can understand the academic problems, when considerable authority and power must pass into a few hands. This procedure seems to be the inevitable end of most democratic societies, and we see the ancient guilds which were a protection of quality merging into trade unions which seem to aim at an economic protection. As things are we do not expect the unions to become craft guilds; we believe that the influence of public education has converted the craft guilds into trade unions and substituted polemics for work.

It is worth quoting here an extract from the "Industrial History of England." The extract is taken from Mr. Cobden Saunderson's essay on Ideals in Industry:—

"The artisan or craft guilds, which afterwards became very important, arose first in the towns, and originally seemed to have consisted of a small body of the trading men of a particular craft, to whom was confided the regulation of a particular industry, probably as soon as that industry was thought of sufficient importance to be regulated. The guild, 'and this is important,' tried to secure good work on the part of its members, and attempted to suppress the production of wares by irresponsible persons who were not members of the craft. Their fundamental principle was, that a member should work not only for his private advantage, but for the reputation and good of his trade."

The position to-day, as we see it, seems to be that the workers' leaders probably have these fundamental principles in mind, but they have given a narrow political or economic twist to our conception of trade reputation, and as a consequence they forget the duty and responsibility of service for the common good of mankind.

It may be urged that while we are discussing work in terms of craftsmanship we are merely lamenting the absence of ideals in work, whereas by far the greater problem is the one which involves not only the necessity for work but the manner of finding it. We grant that our whole economic system is at present out of gear, and that the urgent need of the country is to find work for everyone. We admit that the problem is greater than a part of it, nevertheless we believe that the ideals underlying good craftsmanship are precisely those which have been undermined in the economic problem. Ideals have gone astray in the welter of argument upon economic doctrines. It may seem a trivial thing to worry about ideals in craftsmanship when a great proportion of craftsmen can find no work to do, but if we look closely enough we may trace the confusion between cause and effect. Craftsmanship, or the quality of the work (call it what you like) will look after itself, we are told, if we can only find work, but surely there is something of an inversion here when we know that if we had the

right idea of work there would be plenty of it. Craftsmanship is not only manual dexterity; it is a form of service, and carries with it an obligation either not to think about economics, or to be able to think beyond trade agreements and the number of pennies per hour.

We are not suffering from the want of theories, but the most that our education in political economy has done for us is to enable us to create an artificial economic position, and prevent the elementary laws of political economy from working out the position for us automatically. This may be deemed a negative policy, and so it is; consequently we refuse to test it against our facile theories. Where work is concerned we avoid it; we prefer to rely upon our wits. We do not suggest that all the knowledge is on one side and that the workers are always in the wrong; on the contrary, we believe that the economic theories (as opposed to economic principles) of one side are as good as those of the other, but when we are discussing craftsmanship, the joys or—as some would have us believe—the evils of craftsmanship are the exclusive privilege of the craftsman.

The recent dispute arising out of the proposed erection of steel houses provides a piquant touch to our argument. The nation in a desperate situation invited substitutes for the traditional methods of building to help to reduce the huge shortage of houses. One set of craftsmen receiving higher wages objected to another set of craftsmen working for lower wages in different materials. We were doubtful about the sincerity of this display of altruism between the different crafts, but we had no doubt that the significance of the country's needs was being flagrantly overlooked by the doctrinaires. The contention that the steel house "attempted to superimpose upon the building industry a lower rate of wages," was merely another way of saying that another competitor was in the field. It would have been easy to invert this contention by saying that the building trade were seeking to superimpose upon the engineering industry a higher wage to neutralise the economic advantages of the building substitute which had been evolved. The whole difficulty arose from the artificial economic situation which was built up, and in refusing to realise that it was artificial and therefore vulnerable when it was against the best interests of the country.

We raise the question of the steel house entirely from a disinterested point of view, although we regret the failure of the building industry to meet a situation which was clearly obvious, even if it was abnormal. It might be contended that the building industry, in its objection to the steel house, was thinking of its reputation for craftsmanship, and of the industry, but ample warning was given by those who could foresee the danger, and it was neglected. In the end, force of public opinion will always find a remedy when the responsibility of service is neglected, and thus we come back to our original point: If the welfare of any industry rests upon the ideals of craftsmanship and service, there will be no danger from faulty reasoning in the realms of political economy.

The whole problem of work must be based upon some ideal of service to society, whether in the quality and tradition of workmanship or in the brains which are responsible for the economic policy. Quality in workmanship, and many other qualities associated with it, have not been destroyed in the name of science and wealth; they have been destroyed mainly because the true conception of work and craftsmanship has given way before our new and facile teachings.

NOTES.

The Manchester Art Gallery Award.

THE protests which have been made against the award in the Manchester Art Gallery Competition ought to be seriously considered. If they have a sound basis for action it should be taken, but even if that is not the case, it should be fully disclosed wherein lies the discrepancy between the views of the assessors and the competitors, so that future troubles of this sort may be avoided.

Tudor Design for New Street.

WHATEVER may be said as to the desirability of reverting to our traditional Tudor architecture for the entire treatment of a fine new thoroughfare in the city of Hull, we may at least welcome whole-heartedly the enthusiasm and imagination which have inspired the Lord Mayor of Hull in his ideal for improvement and development of a modern city in this way. How far the fine municipal buildings which Hull has recently erected may have been the direct incentive to the desire for further city improvement we do not know, but the great improvements in the city should certainly act as an inspiration to further efforts. The public are probably a little tired of the heavy type of modern Renaissance which is adopted for so many buildings to-day, and such reversion to a really English style like that in Liberty's new premises close to Regent-street are undoubtedly welcome. The creation of an entire new thoroughfare with buildings of Tudor design may suggest to many that we should gain picturesqueness and lose dignity of effect, but that certainly does not follow in the

hands of a capable architect. We are told that the Lord Mayor of Hull has adopted Gothic in the artistic habiliments of his business, even down to Church Text for his typewriting, but this need not be set down to his discredit if he has the ability and force to persuade his city how essential it is that its fine new thoroughfare from Paragon-street Station to Berentz-road shall be fronted by buildings of good architecture.

The A.A. in Denmark and Sweden.

THE A.A. visit to Denmark and Sweden has been a great success, and must have helped to strengthen the ties that have always bound these countries of the North to ourselves. That we have a great deal to learn from them is evident, and it is no less clear that the lavish hospitality and kindness to be found in Scandinavia have not been exaggerated. Visits of this kind fulfil more than their immediate purpose, for they awaken an enthusiastic desire on the part of those who enjoyed the trip to send others to share in the inspiration to be gained in the work—old and new—of those countries. We would remind our readers that it is easy to reach Copenhagen and Stockholm over land, and that the sea voyage that looks so alarming on the map need not deter them from undertaking the journey.

International Art.

THE "A.A." is often serious but it is never solemn, and nowhere does it better show its genius for work and play than when on holiday. The party that spent those two wonderful and crowded weeks travelling in Denmark and Sweden was distinctly on the young side (its one

grandfather was the youngest of the party!); it was out to learn and enjoy, to make friends and, if possible, to keep them, and the influence of the trip is not to be measured in the sketches, photos, and written accounts which will be the visible record of the adventure. Adventure it was in a fine sense, and the contact with two different and stimulating countries will make an impression far beyond the immediate range of those who took part in it. It is curious that while art has been largely internationalised since the war, local and race character appear to be more strongly cherished. The Renaissance was denationalising; the present tendency reverting further back still to material and function has discovered the soil. The genius of England will be best expressed in its architecture when its young men and women learn how other countries not only build but live.

Amongst the charms of The London London are its squares, Squares.

usually adorned with trees—no wonder that we all hope they may be preserved for the general amenity. But the chairman of the L.C.C. Town-planning Committee points out that, unfortunately, in many cases we have not to deal with private ownership. The various borough councils and other authorities seem to own some two-thirds of those enclosures scheduled under the London Squares Preservation Bill of 1906. Meantime an inquiry is proceeding on behalf of the L.C.C. as to what squares may be regarded as safe, what squares are protected or unprotected by judgments, which are in immediate danger, &c. The cost of acquiring the squares which are in danger seems to be prohibitive, for the time being at least.

Detail of Painted Figure Frieze in the New Gallery Kinema, Regent Street, London. By GERTRUDE HALSEY.

Detail of Painted Figure Frieze in the New Gallery Kinema,
Regent Street, London. By GERTRUDE HALSEY.

THE letters we published last week from the Hon. Secretary of the East Kent Joint Town-planning Committee and Messrs. Culpin & Bowers throw some light upon the situation. They show that one colliery company is dealing seriously with its housing, and also, what we never doubted, that the town-planning advisers to the Ministry of Health are doing what they can to help. We note also that a Town-planning Report is shortly to be issued. This is excellent so far as it goes, but the arrangements for the area as a whole can hardly be called "effective" when it is admitted that "it is difficult for the Eastry Rural District Council to take any steps definitely to town-plan the areas, owing to the fact that the colliery owners are not prepared at the present time to give any definite information as to the sites which will be utilised for the housing necessary in connection with the collieries, and they are even uncertain as to the sites of the collieries themselves." The point is that at present there is no efficient co-operation and no legal restriction, nor any immediate prospect of restriction upon haphazard development. Judging from the correspondence, one

must conclude that the next step lies with those colliery owners who are not ready with the requisite information. We hope that they may see their way to enlighten the public as to their position.

"THE Man in the Builder's Yard" writes to us, but without giving his name or address: — "Those who have written from the high-brow, high-pedestal, professional point of view concerning the Hudson Memorial have overlooked the following in 'Green Mansions' page 65, chapter v: 'It was a human being—a girl form . . . one arm was doubled behind her neck . . . while the other arm was extended before her, the hand raised towards a small brown bird. . . .'; and page 77, chapter vi: 'In casting about for some term or figure of speech in which to describe the impression produced on one at that moment, I think of *waspish*, and better still, *avis-pada*—literally the same word in Spanish, not having precisely the same meaning nor ever applied contemptuously—only to reject both after a moment's reflection. Yet I go back to the image of an irritated

wasp as perhaps offering the best illustration; of some large tropical wasp advancing angrily towards me, as I have witnessed a hundred times, not exactly flying, but moving rapidly, half-running and half-flying, over the ground, with loud and angry buzz. . . . Surely, the sculptor did not go far beyond that portion of the book to make his image—his wasp-girl, with its waspish face, wasp-waist, small round body, elongated lower body, all waspish, half-flying, with W-shaped arms? Most people get into a panic over a wasp. This angry tropical one, so literally rendered in stone, has stung many, so badly, indeed, that it is they who do the buzzing! Really, it is amusing to hear professionals talk high-art over a grossly literal rendering of a figure of speech, and I wonder who enjoys the joke most?"

THE appointment of Mr. Miles Malleon, the actor and playwright, as dramatic adviser to the I.L.P., is more than a gesture. The Labour Party, as a party, cares definitely for art, and is anxious to show that art patronage is not the prerogative of the rich and great. Artists respect this encouragement, and they cannot better express their co-operation than in proving that art is beyond class as it should be beyond sex. Whether such detachment is helped by the incorporation of a particular person with a party machine is doubtful; propaganda is an insidious element in political life. We hope that the sincere impulse which placed Mr. Malleon where he is will not overlook the lesson from other essays in political patronage. Napoleon carried off artistic spoils to celebrate his glory in war, and the desire to exploit art can still be expressed in other ways. The Labour Party can do much to release art from the bonds in which materialism has left her, but in playing St. George let it not forget England.

Detail of Painted Figure Frieze in the New Gallery Kinema, Regent Street, London. By GERTRUDE HALSEY.

GENERAL NEWS

Building Students' Association.

The members of the Wolverhampton and District Building Students' Association recently visited the works of the Himley Fire and Red Brick Co., Ltd., near Dudley. The party were shown over the works and laboratory by Captain Yates, and were afterwards entertained to tea at the "Crooked House," at Himley.

Ancient Warwickshire Building Threatened.

The Warwickshire Archaeological Society is urging the Town Council to consider taking steps to prevent the threatened demolition of the Priory, one of the town's most ancient buildings.

Proposed Manchester Town Hall Extension.

A preliminary scheme for the lay-out of the new buildings which are proposed as an extension of the Manchester Town Hall, has been prepared by the City Architect, Mr. Henry Price.

Dangerous Structures Surveyorship.

Mr. Gilbert H. Lovegrove, F.R.I.B.A., F.S.I., of Messrs. Lovegrove & Papworth, 374, Old-street, E.C.2, has been appointed, by the City Corporation, Surveyor for Dangerous Structures in the City of London under Part IX of the London Building Act, 1894.

The Newcastle Conference.

We would remind readers that those who propose to attend the R.I.B.A. Conference to be held at Newcastle and Durham, from July 8 to 11, should notify the Secretary of the R.I.B.A. without loss of time. Full particulars of the conference were given in our issue for June 19.

New Baths and Washhouses, Paddington.

Erected on a site dividing Queen's-road and Porchester-road, Bayswater, and at a total cost of nearly £130,000, new central baths and wash-houses at Paddington have just been opened. Mr. Herbert Shepherd is the architect.

Old London Prints.

The London County Council has arranged for selections from the prints and drawings in its possession illustrative of eighteenth-century London to be exhibited at the County Hall. The public are admitted to view the County Hall from 10.30 a.m. to noon, and from 1.30 p.m. to 3.30 p.m. on Saturdays.

Appointments.

The King has sanctioned the appointment of Dr. F. J. Waldo, H.M. Coroner to the City of London, as Knight of Grace to the Grand Priory of the Order of the Hospital of St. John of Jerusalem in England. The oldest Order in Europe—founded A.D. 1014—"for the service of mankind."

Mr. E. Cavanagh, L.R.I.B.A., and Mr. C. E. L. Parkinson, A.R.I.B.A., have been appointed as additional architectural assistants for one year to the Battersea Borough Council.

Obituary.

We much regret to record the death, at the age of fifty-four, of Mr. Donn Barber, F.A.I.A., the distinguished American architect. He began practice on his own account in 1900, and up to the time of his death his professional career was marked by continued and brilliant success. He was a Beaux-Arts man, and gained his early experience in the offices of Carrère & Hastings, Cass Gilbert, and Lord & Hewlett.

COMPETITION NEWS

Pretoria Town Hall.

H.M. Senior Trade Commissioner at Johannesburg has forwarded a copy of minutes received from the clerk to the Municipal Council of Pretoria concerning the erection of a new Town Hall in that city. It is stated in the minutes that competitive designs will be invited at a cost (first estimate) of about £200,000. British firms interested in this announcement can consult the minutes referred to on application to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1.

St. Olave's School.

The Governors of the St. Olave's and St. Saviour's Grammar School propose to considerably extend their buildings in Tooley-street, S.E. 1. An area of land in Tooley-street, covering some 9,800 sq. ft., is being purchased, and the accommodation of the school will be increased to 500 scholars. It is understood that a competition among architects will take place for the purpose of obtaining plans.

Norwich Masonic Building Scheme.

Messrs. Edward Boardman & Son, the assessors, have made the following awards in this competition:—(1) Mr. Stanley J. Wearing, A.R.I.B.A., 3, Redwell-street, Norwich; (2) Mr. E. H. Buckingham, of Messrs. Morgan & Buckingham.

Worcester School Competition.

The Worcester City Council have decided to erect a new secondary school for girls on the Thames House site, at an estimated cost of £32,000. Local architects are to be asked to submit designs for the complete scheme, with alternate estimates for reinforced concrete blocks or reinforced brickwork. Two prizes will be offered for the best designs submitted, the first to be a prize of fifty guineas and the second one of twenty-five guineas. The prize to be merged in the architect's commission in the case of a successful competitor's design being accepted by the Council. The Council have also agreed to approach Mr. Widdows of Derby and Mr. Buckland of Birmingham with a view to one or the other of them acting as assessor of the designs, the Council reserving to themselves the right of ultimately deciding which set of designs shall be accepted.

Wolverhampton and Staffordshire Hospital.

Designs are invited by the Board of Management for a proposed new outpatient and casualty department. Mr. T. R. Milburn, F.R.I.B.A., has been appointed assessor, and premiums of £200, £150, and £110 are offered respectively. Sending-in day Sept. 5.

London School of Hygiene and Tropical Medicine.

In the limited competition for designs for the permanent quarters of the London School of Hygiene and Tropical Medicine, to be erected on the site adjoining Keppel-street, Gower-street, and Malet-street, near the British Museum, first place has been awarded to the design submitted by Mr. P. Morley Horder, F.R.I.B.A., who has been appointed architect for the work. Sir Frank Baines was the assessor.

Coventry Hospital.*

Sevenoaks U.D.C. Housing.*

Gower R.D.C. Housing.*

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Argentine Institute (Dec. 1; April 24). Copenhagen Bridge (Sept. 1; April 24). Warwickshire Hospital Extension (Aug. 10; May 29). Newcastle Fire and Police Station (Oct. 8; June 12). Drammen Bridge (Oct. 1; May 29).

* Competitions when "warned" or vetoed by the R.I.B.A. are Starred.

"Vallo," Denmark.

[Formerly a Royal Castle, now a home for ladies of the nobility.]

The New Gallery Kinema, Regent-street, London : The Auditorium from the Balcony.

MESSRS. NICHOLAS & DIXON-SPAIN, FF.R.I.B.A., Architects.

ROYAL HOSPITAL SCHOOL COMPETITION, AT HOLBROOK, NEAR IPSWICH

HALF-A-DOZEN designs for this extensive and interesting series of buildings were recently submitted in a limited contest, and the drawings have been on view during this week at the Royal Institute of British Architects. Sir Aston Webb, P.P.R.A., acted as the adjudicator, and we agree that he has undoubtedly selected the most appropriate design. All the schemes are quite meritorious and worthy of the occasion, though the assessor can have experienced little difficulty in arriving at his award. The successful architects are Messrs. Buckland & Haywood, of Birmingham, who are to be congratulated on their success, and if the school is carried out as the authors have designed their various main buildings with their accessories, this achievement will greatly increase the architects' reputation.

In the absence of a block plan it is not easy to describe the many difficulties which had to be solved to compare each scheme with the others. Some reproductions of the chief features of this undertaking, as illustrated by the accepted design, were published in *The Builder* on May 8 last. These plates show the lay-out of the central administration block, with its handsome, lofty tower and the complimentary turrets in the return fronts marking the entrances to the dining hall on the right and bathing pool house on the left. These wings are linked up with the assembly hall by a range of classrooms overlooking the parade ground in a spacious way distinctly marked by architectural individuality, refined and broad in handling, without any undue elaboration or fuss. The main approach is from the rear on the north, reached by diagonal roads disposed somewhat after the manner shown by scheme No. 1 submitted by Mr. Vincent Harris, who may be reckoned second in merit.

The hostels in the chosen plan are set out in double order east and west of the parade ground, which has an elevated saluting base in centre of its top frontage. The rather Baroque-looking chapel is located at the extreme end of the western vista surrounded by a formal garden, and at the termination of the view eastwards stands the superintendent's house. Towards the north is the fourteenth hostel, to be occupied by fresh arrivals. The isolation building and the hospital are well placed for their purposes. The classrooms are laid out round squares and along roadways to the northern or upper levels, while others occur in the vicinity of the chapel. The rifle range is below the pavilion south of the parade square.

No. I.—We carefully noted the large series of drawings sent in by Mr. Vincent Harris, whose scheme is compact, scholarly and ingenious. The octagonal chapel features finely the main front to the south, where a dripping-pan-like stadium is provided for games. The bathing house and the gymnasium are put at back of the parade square, which measures 350 ft. by 300 ft. The assembly hall, with workshops beyond it are on its left, with the dining hall to the right. The fourteen hostels range along the southern front and the classroom houses are set along the four radiating roads at the rear, which nicely meet in a handsome rendezvous where the entrance gates make a fine feature, close by being the headmaster's residence and chief officer's house, each well commanding the approach. Below the "Park Covert" the isolation block and also the infirmary are placed, nearly the same as shown by the selected plan. The simple Classic severity adopted by Mr. Harris is managed with good proportions, and the details of his planning show much thought, and here, as in most of the designs, the classrooms face the south with cloisters behind round inner quads. The perspective shows the campanile set between the gymnasium and bath at rear of the central parade adding much dignity.

No. II, by Messrs. Adshead, Topham and Adshead, is marked by the bold manner in which the assembly central hall projects towards the river in front of the main southern façade. It measures inside 127 ft. by 55 ft., and is flanked by classrooms, with southern windows, and large inner quads behind. The parade

ground is set behind, and has the block for administration on the north frontage, while behind that stands the big dining-room, with its capital elevation marked by two big bays. This front is somewhat obscured to view. The boiler-house extending at the back completes the bisection of the site cleverly. The bath building and gymnasium are on the east of the parade ground, particularly plain in treatment, with sufficient space between to approach the chapel, which is long and narrow on plan, having square mullioned windows and a regular chancel. The grouping of the various class houses is well contrived, all neatly designed, with wide eaves, if somewhat bold in style.

No. III, of which Messrs. W. & T. R. Milburn, of Sunderland, are the authors, is in some respects similar to No. I, especially in the disposition of the chapel flanked by the seven hostels on either hand. The brick tower adds importance to the parade ground, but the pinched appearance of the school block is due to the over-long pilasters under the pediment above on the campanile façade. The vertical lines of this over-large tower tend to reduce the apparent width of the assembly hall behind it. The dining hall is on the right of the parade ground, and the rifle range, gymnasium and bathing house rise correspondingly to the left. An oval-shaped sports area is planned in alignment with the chapel. The northern location of the staff cottages occurs above the level of the boiler house. The sanatorium and hospital face the south-east at the eastern end of the property with its many undulating levels. The masters' houses range round the boys' playing fields. The superintendent and chaplain are quietly put away in the south towards the future ceremonial landing stage leading through an avenue up to the chapel, which will seat 1,250 persons.

No. IV, submitted by Messrs. Nicholas & Dixon-Spain, is mainly based upon a parallel lay-out, with the chief frontages, like the other schemes, towards the south, and the entrance is set off on the "road to Ipswich" at the north, and the infirmary approach is skirted by this highway and also adjoins the "open road" to the west of the parade ground. The classrooms project beyond the "school courts," with the detached assembly-room on one flank and the chapel on the other. The bath and gymnasium occupy like situations in the parade ground (behind this "school court") balanced by the dining hall and kitchen premises. The H-shaped hostels, as in the winning scheme, are set out in double order three behind four, so that the rear ones get light and air between in the interspaces of the frontier series. The chapel has a monumental west façade, which is quite of the first rank in this competition.

No. V is contributed by Messrs. Marshall Mackenzie & Son, and their scheme has an individuality of its own, being based upon a vast quadrant arrangement with the big radiating lay-out of the hostels forming an extensive crescent. The dining-hall set in the centre is emphasised by a splendid campanile rising above a colonnaded pavilion serving as a frontispiece, with the library and museum on one hand and a smallish administration block on the other, their dwarf contour enhancing the scale of this tower. "The schools" occupy the left hand of a commodious quad or parade ground, and the bathing establishment and gymnasium come rather well towards the right, the chapel being reached between these buildings in a secondary fashion. The headmaster and his large body of assistants have dwellings south of the principal centre-piece and extending the whole dimension of that front, which is considerable. The artisans are housed in a long line north of the quadrant above it on the west. The infirmary comes on the east. This design is a performance of no inconsiderable merit and much dignity. The chapel has an almost flat roof and Tudor windows. It is set 'twixt the two rigidly simple elevations of bath and gymnasium in clever contrast.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS

THE Fourth National Convention of Delegates of the Association of Architects, Surveyors and Technical Assistants was held at Whitsuntide at the Head Office in London. The chair was occupied by the newly-elected President, Mr. E. Fiander Etchells. In addition to the President there were elected to office and to the Executive Council the following:—

Vice-Presidents: Mr. A. Cunes (Devon and Cornwall), Mr. H. R. Surridge (Leicester and Northants), Mr. J. G. Marr (Aberdeen). Trustees: Mr. J. W. Denington, Mr. Chas. Pickford, Mr. R. Gordon Strachan. Hon. General Treasurer: Mr. C. G. Wright.

Members Executive Council: Messrs. C. A. Adamson, John Battey, J. W. Denington, J. W. M. Dudding, R. G. Forbes, J. A. Gould, A. S. Hinkley, R. B. Holloway, F. R. Jelley, A. M. Laurie, E. G. Lynde, Chas. McLachlan, G. W. Mitchell, A. S. Reeves, F. E. Simpkins.

The Annual Report dealt with a variety of subjects, all of them of great interest to salaried architects, surveyors and builders' technical staffs. In furtherance of the Association's aim to abolish the box office method of filling vacant posts, 138 members had been placed in positions during the year. At the moment unemployment had fallen to its lowest point since 1920, and few members were out of employment. The recognition by the Royal Institute of British Architects of the principle of a minimum payment for professional assistance had been carried another step forward. A deputation had presented the case before a sub-committee of the Practice Committee of the Institute. The decision of the R.I.B.A. Council is awaited with interest. The Association's position is plain. There is in existence a minimum and flat rate scale of fees approved by the R.I.B.A., for the protection of the practising architect, therefore it is logical to have a minimum payment for architectural services rendered to the practising architect by the assistant. There are over 300 firms throughout the country who recognise and pay their assistants the amount of minimum salary claimed by the Association on behalf of its members [i.e., £5 10s. (approximately) per week for all over 26 years of age, and £3 8s. (approximately) per week for all over 19 years of age]. Large numbers of protests against underpayment have been sent to private firms, public companies, local authorities and Government departments. Districts where our membership is strong and active have maintained, in some cases, more than the salaries being paid. On the other hand, it is amazing to find that the average salary paid to assistant architects throughout the country is from £3 to £4 per week! This fact explains the urgent need there is for the general recognition of a minimum salary. The allegation that the architectural profession is seriously overcrowded and the consequent increase in the amount of casual employment amongst assistants is now the subject of a joint inquiry by a committee appointed by the R.I.B.A. Council and the A.A.S.T.A. Executive Council. Its report is now awaited.

For the first time an assistant architect is now a member of the Royal Institute of British Architects' Council, in consequence of the Association having secured an official representative thereon. The architectural group has appointed one of its founders and the first Hon. General Secretary, Mr. Chas. McLachlan, A.R.I.B.A., as its representative for the year 1925-26. The A.A.S.T.A. Benevolent Fund has received a good start-off during the first year. Thanks are due not only to the members who have subscribed, but also to the various firms and individuals connected with the building professions and industry who have so generously responded. New members are enrolling at the rate of over thirty a month, whilst many lapsed members have rejoined. In the words of the President, "Never in the Association's history has its prestige been higher." The Report was unanimously adopted.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Manchester Art Gallery Competition.

SIR,—As a competitor I have read your article on this matter in your issue of June 26 with great interest. You say, "If ever there was a clear breach of conditions, it is to be found here." Is nothing going to be done about it again? If all those competitors who agree with your remarks about this competition, or who are victims of other recent injustices, will write to me, I will endeavour to organise some form of protest. Any letters I receive will be treated with the strictest privacy. I feel certain that to gain no premium will be as nothing in the hearts of unsuccessful competitors—that is but an incident; but injustice is another thing. And if, out of this ridiculous farce, some improvement should come, then their labours will indeed not have been in vain.

KENNETH GLOVER, F.R.I.B.A., M.I.Struct.E.
11, Saville Chambers,
North-street, Newcastle-on-Tyne.

The Church and Freemasonry.

SIR,—Apocryph the King's visit to Oxford on June 24 in honour of the celebration of the foundation of Wolsey's College, Christ Church, in 1525, it is of interest to all Freemasons to recall that its founder, in whose honour the college was first called Cardinal's College, was appointed Grand Master on the accession of Henry VIII, and held office from 1509 to 1534, and during his term he built Hampton Court, Whitehall, Christ Church College, Oxford, and several other noble edifices, all of which, upon the disgrace of that prelate, were forfeited to the Crown in 1530. Wolsey was not the only ecclesiastic in high office who had been Grand Master, Warden, &c., in Masonic history. In 1066 Gundulph, Bishop of Rochester, was appointed "Joint Patron of the Masons," and under his auspices the Tower of London was begun. In 1272 the superintendence of the Masons was entrusted to Walter Giffard. In 1367 Walter Stapleton, Bishop of Exeter, was appointed Grand Master, under whose auspices Exeter and Oriel Colleges, Oxford, and Clare Hall, in Cambridge, were built. William of Wykeham, Bishop of Winchester, continued as Grand Master on the accession of Richard II, who built New College, Oxford, and Winchester College at his sole expense. Again, on the accession of Henry V, the fraternity was directed by Chicheley, Archbishop of Canterbury, under whom the lodges and communications of the fraternity were frequent. In 1447 Henry VI presided over the lodges in person, and nominated William Wainfleet, Bishop of Winchester, Grand Master, who built Magdalen College, Oxford, and several religious houses during his term. In 1471 Robert Beauchamp, Bishop of Salisbury, was appointed Grand Master by Edward IV, and honoured with the title, Chancellor of the Garter, for repairing the Castle and Chapel of Windsor. On June 24, 1502, when King Henry VII was Grand Master, he appointed John Islip, Abbot of Westminster, his Warden on this occasion, when he (the King) proceeded in great state to the north-east end of the Abbey to lay the foundation stone of that excellent piece of Gothic architecture called Henry VII's Chapel. After the beheading of the Duke of Somerset, the Grand Master, in 1552, John Poynt, Bishop of Winchester, presided over the Lodges until the death of the King in 1553. The Elizabethan Reformation followed, and no more ecclesiastics were appointed to any office in the fraternity. By the way, it is interesting to note that in 1425 an Act of Parliament was passed against Freemasonry, but was never enforced; the Act "was made against the

meetings of the Chapters, and congregations of Masons, commonly called free-masons."

HUBERT BURROWS.

Eccentric Loads upon Pillars.

SIR,—Section 22 (21) (c) of the London County Council (General Powers) Act, 1909, provides that any pillar eccentrically loaded "shall have the stresses caused by such eccentricity computed," &c. No rules are prescribed for computing such stresses, and in some cases the computation has been of a haphazard nature.

According to the formula usually to be found in text-books,

$$W_1 = W + \frac{Wxy}{R^2}$$

where W is the actual load, W₁ is the increased centric load equivalent to W when placed eccentrically; x is the distance between the centre of the load and the axis of the pillar; y is the distance of the outer edge of the pillar from its axis, and R is the radius of gyration.

The accompanying diagram shows the application of the above rule in the common case of a steel joist used as a stanchion, the load being conveyed from a girder on to a bracket fixed to the web. Rivets and unessential details are omitted. The section represented is 9 in. by 7 in. at 58 lbs. per ft. I have worked out the effect of eccentric loading with x=2 in., and the formula gives W₁=W+2.6W, or the result of placing the load at 2 in. from the axis increases the stress upon the stanchion by 260 per cent. It appears to me that if this be true, many structures now standing ought to be on the verge of collapse. With deference, I suggest that there is a fallacy somewhere.

The theory assumes deflection in the girder. Now, unless the girder is overloaded, the deflection at the bearing is imperceptible and quite negligible; consequently, in regarding the girder as perfectly rigid, we may assume the load to be acting with a shearing stress at the end of the girder next to the web. The dimension x will then be measured to the end of the girder instead of to the centre of the load, and its value in this case will be $\frac{1}{2}$ in., which means an increase of 64 per cent. in the effective load, through eccentricity. In the case of a flange stress the increase would be 170 per cent. If we put x=1 in. we shall have 129 per cent. for a web stress, and 187 per cent. for a flange stress. In cases where structures have been designed without any allowance for eccentricity of loading it is probable that such additional stresses are covered by the factor of safety. I have known a contractor who, in estimating for steel-frame structures, allowed for additional stresses amounting to 50 per cent. for a web stress and 100 per cent. for a flange stress.

GEORGE H. BLAGROVE.

June 18, 1925.

Proportioning Concrete.

SIR,—One can understand the objection of your correspondent "Concretius," to Mr. Topham Forrest's proposal that sand and gravel should not be separated when gauging concrete mixtures, when one considers that the whole question of proportioning mixtures to reduce voids is much neglected in this country.

Most specifications call for so many parts gravel (or stone) of a certain maximum size and so much sand and so much cement, all by volume, and it is assumed without further tests that all "clean, sharp" material below 1/9 in. is equally suitable for sand, whatever the percentage of the differently-sized grains forming its whole.

Many investigators have demonstrated that the strength and impermeability of concrete depend to a very large extent on having certain well-defined proportions of aggregate ranging in size from the maximum largest practical size—say 1½ in.—down to the finest grains of sand—say those passing a 50 by 50 sieve, and that given proper cement and workmanship concretes up to 2,000 lbs. per sq. in. crushing can be obtained from a mix which would be more commonly specified as 9:2:1, and obtained in everyday work in large quantities, and, the writer is satisfied, at a price which is not excessive.

One often reads specifications calling for "fine material to fill the voids"; it is not generally realised that the said fine material is itself void to the extent of perhaps 30 per cent. of its volume; and very careful "mechanical analysis," and possibly the combination of several different grades of sand, is necessary before the voids in the whole aggregate can be reduced down to 30 per cent. It is probable that most concrete to-day is being made with aggregate having 40 per cent. and 45 per cent. voids that are later more or less filled with cement at 60s. per ton, when by using the method of mechanical analysis laid down by Professors Thompson and Taylor a stronger and more watertight job could be obtained at a lower cost.

After so much research work has been done it is somewhat a condemnation of all sections of the industry that there is to-day no recognised standard or measure or method of good concrete that would be accepted by any half a dozen architects and engineers selected at random; they would each draw a different specification with different measures and different methods for the same jobs, and then only use perhaps 25 per cent. of the safe strength of first-class concrete.

Why not cut out all reference to volumes of cement, sand, stone, &c., and specify by strength, as, for instance, 600 lbs., 1,000, 1,500, or 2,000 lbs. concrete, and pay for concrete according to its importance in the structure?

Edinburgh Architectural Association.—Visit to Dirlton Castle and Tantallon or Bass Rock.

BOOK REVIEW

The Studio Year Book of Decorative Art, 1925. (The Studio.) Price 5s.

The Studio Year Book for 1925 maintains its high standard, and is well illustrated in its various sections, many of the illustrations being in colour. The work of English and Continental architects and craftsmen is well represented by the work of many of our leading designers, well known for the excellence of their domestic work. The garden, architectural and furniture sections are particularly strong; the gardens show some charming examples. Mr. Frank Brangwyn, R.A., contributes the foreword. The volume is an excellent record of current art work, and keeps one in touch with the development of art on the Continent.

THE A.A. IN DENMARK AND SWEDEN

By MANNING ROBERTSON.

SOME IMPRESSIONS OF DENMARK.

FIVE days hardly constitute an adequate allowance of time for obtaining a comprehensive view of Danish architecture—we were robbed of a sixth day by a strike—but in so far as it is humanly possible to see Denmark in five days, our hosts—Hr. C. Brummer, Fru. Brummer, Hr. R. Wied, Hr. Marnus, Hr. L. Hygom, Hr. A. Cock-Clausen, Hr. Packness, Hr. Stegmann, Hr. E. Thomsen, Hr. S. Moller, Hr. S. Risum, Hr. E. Dyggve, Hr. G. Laage, Hr. T. Havning, Hr. E. Monberg, Hr. J. Tvede, Hr. M. Clemmensen, Hr. E. Petersen, Hr. A. Jensen, and Fru. Jensen—the Danish architects, saw to it that we did so. After a calm sea voyage of some twenty-four hours, the party arrived at Esbjerg, on Sunday evening, June 7, where we were met by about fifteen Danish architects, including Mr. and Mrs. Carl Brummer and Mr. Monberg, the President of the Danish Institute of Architects. It is not until one realises that the distance from Copenhagen to Esbjerg is the same as that from London to Liverpool, but includes two sea passages, that one can appreciate the goodness of our hosts in coming so far to welcome us and to conduct us personally through the most interesting regions of Denmark.

On Monday, we were taken to Ribe, an extremely old Danish town dominated by a tremendous seventeenth-century cathedral tower in brick. Here one can see streets of old half-timber houses and of mellowed stepped gables, often capped with the nests of storks that winter in Egypt and fly north across Germany in the spring. Lunch was provided and speeches were exchanged at the hotel "Klubber," where we made our first official acquaintance with the toasting art, to "skaall." In crossing Jutland by rail from Ribe to Kolding, we were able to form some opinion of the Danish countryside. The country abounds in beautiful old farm-houses, often of whitened bricks, and in little churches with gabled towers, such as that

at Hesselgarde. Advertisement hoardings are practically non-existent, and the ordinary modern houses and cottages—all electrically lighted and communicating by telephone—reach a level of design that we can only find in selected places in England; the general impression is that the country has been used in the right way and that man has embellished rather than degraded it.

The steamer from the mainland to the island of Funen landed us at Hindsø, by invitation of the Association of the North. The mansion, an admirable example of eighteenth-century brickwork, is set in a park overlooking an arm of the sea. From Hindsø some motor charabancs conveyed us to Odense, the capital of the island, and the birthplace of Hans Andersen. Odense is the third city of Denmark, and, like every other Danish town of importance, has access to the sea. The most interesting building is St. Canute's church, with a fine cloister in decorated brickwork. The interior of the church is of brick with pointed arches and groined vaults, but an unusually bright and interesting result is derived from plain limewhiting, a common and traditional treatment. Like all Scandinavian churches, it lacks stained glass, but the ironwork and other details contribute the personality that appears inseparable from the work we visited.

On Tuesday we left Odense by motor for Egeskov Castle, where we were entertained to a typical—and very lavish—Danish luncheon by Countess Ahlefeldt-Laurevig-Bille, who, with her nieces, kindly showed us over the castle and grounds. It is an extraordinarily perfect example of sixteenth-century brickwork; a fortress, yet strongly domestic in character, it stands surrounded by a moat, and can be approached from the back by a suspension bridge; the sense of association permeates the building, inside and out. The plan is peculiar in that it consists of two long and narrow houses lying side by side, and separated by a wall 8 ft. thick that is honeycombed with passages. The garden was laid out in the eighteenth

century, and forms a fine setting for a memorable example of architecture.

From Egeskov we were motored to the Castle at Hesselagergaard, where we were entertained by Baron Blixen-Finnecke. Here, again, we found a revelation in the solid treatment of brickwork, the brilliant sun bringing out the depth of shadow and the velvety texture of the walls. The plan consists of a very long and narrow house with two projecting towers at the corners, standing out into the moat; the interior reveals some quaint fresco figures and several beautiful little panels of conventional design.

Our next castle was Holckenhavn, near Nyborg, where once again we were lavishly entertained by the owner, Baron Holck, who was himself unfortunately absent. This building was begun in the sixteenth century, but the main effect is given by the great façade, dated 1624, and conveys a much later impression than the two previous examples. The castle encloses a courtyard and forms a splendid group; the brickwork is treated elaborately in panels, surrounded by white borders in the shape of swastika and other designs, and suggests the inspiration of the brick treatment of the Danish pavilion at the Paris Exhibition, where alternate brick courses are sunk and lime-whited, giving the effect of immensely thick mortar joints. Evening found us at Nyborg after a day of great interest and intense heat; some of our party found energy for a bathe, and many danced till late into the night.

On Wednesday we were ferried from Nyborg to Konsor on the main island of Zealand, and taken on by rail to Sorø where, after a walk through a shady forest, we crossed a lake to the great Academy, or public school. In showing us over the school the headmaster emphasised the connection between Sorø and England: Ludvig Holberg, who may be regarded as the founder of the modern school, had been educated at Magdalen College, Oxford. The main block of the school dates from 1822, but there still exist two charming wing blocks of an earlier date. The chapel, a monastery church, is one of the most ancient in Denmark, and contains a wooden crucifix that is certainly a masterpiece. As a souvenir of this visit we were all given a special edition of the Journal issued by

Cathedral Tower and Old Houses, Ribe.

Bird's-eye View from Ribe Tower.

Hesselgarde Church.

the Society of Academical Architects describing and illustrating the academy, and with a special preface written in English by the distinguished scholar, Mr. V. Wanscher.

From Sorø we went straight to Copenhagen where we were entertained to a banquet given by the Danish Institute of Architects at the "Langelinie Pavilion," the Yacht Club whose restaurant provides that superb view over land and sea that appears to be a normal feature of the Danish landscape. Here we met new friends, and after much pleasant conversation and dancing returned home in the early hours.

Thursday saw us once again in motor cars, this time bound through extensive beech forests for Elsinore. On our way we inspected the royal hunting box known as the Hermitage, and arrived at the great castle of Frederiksborg at noon. Some English airs were played on the chimes in our honour, and we listened to a delightful recital on the old organ in the chapel. The castle, with its surrounding buildings, connected by an S-shaped bridge, makes a bold and romantic group. It is now used as a Museum of National History, contained in what must surely be the most be-decorated interior in the world.

Next we came to the Palace of Fredensborg, which is still used by the Royal Family and is backed by a formal garden. Beside the palace lies a dignified row of houses, occupied, we were told, by the "cavaliers" of the court. It is doing scant justice to all we have left to hurry on to Elsinore, where we arrived at about six o'clock. Here stands the historic castle of Kronborg, facing, though it no longer defies, the long extent of Swedish coast. Within it we walked the ramparts where Hamlet saw his father's ghost; we viewed the dungeons, climbed an immense tower, and then, after a bathe, dinner, dance, and final speeches at the hotel "Marienlyst," were motored back to Copenhagen in the twilight by the coast line.

Friday, the 12th, was scheduled as a "free day," but there was in reality little of freedom about it. Each of us was armed with a special

English edition of "Arkitekten," beautifully produced by Mr. S. E. Rasmussen, illustrating modern architecture in Denmark, and each of us realised how much he wanted to know and how little he could see. We separated and pooled our various experiences in the evening, but here I will only attempt to sketch an impression of the two buildings which we all saw, and which between them represent the two prevailing influences in Scandinavia—the Town Hall and the new Police Headquarters. The Town Hall, a severe and majestic block of brickwork, dominates the principal square; it conveys much the same impressive sense of civic character, plastic brick treatment, and a delight in craft detail that is to be found in its later counterpart at Stockholm. Its form is northern and asymmetrical, and depends upon mass effect, while its neighbour—the Police Headquarters—reflects the new symmetrical and classical spirit which is now animating the younger men in Denmark and Sweden. The exterior of the Police Headquarters is rough-cast a grim grey, and panders to no romantic fancy. Originally designed by Prof. H. Kampmann, it was completed on his death by his son, by H. Jacobsen, and by Aage Rafn. The interior courts are executed in warm-coloured stone and consist of a fine circular colonnaded court and a large square hall, containing two rows of Corinthian columns that support the roof, light being admitted through an enormous rectangular panel that is open to the sky. The greatest interest lies, however, in the colour treatment of the corridors. Some are red, some yellow, and some black and white. The latter were extremely impressive when seen for the first time as part of the general design, but they could hardly fail to be depressing to those whose daily routine confined them to that black-edged part of the building. The lamps and other fittings showed that austere good taste which appears to be inherent in the people.

In the afternoon some of the party were able to accept the kind invitation of Mr. and Mrs. Brummer to tea at their most attractive home,

while the others followed a grim determination to learn all they could to the last. A few penetrated to Mr. Monberg's fine office block for the Danish Steamship Association and admired the restraint and elegance of its interior; some visited Mr. Brummer's Gymnasium, while others combined what they could of the town generally, with a special attention to the immense blocks of new brick tenement dwellings that are springing up on all sides and that have much in common with the excellent work of our own L.C.C.

In the evening we collected in the train ferry for Malmö in Sweden, and said a sorrowful good-bye to our Danish friends in what must be one of the finest railway stations in the world.

This is a hurried account, and it must be believed that in this respect at least it conveys a true impression of those five frantic days. The architects who acted as our guides had organised every small detail to perfection. We were presented with maps of every district we were about to visit, and when we left a place in the morning our overcoats and luggage had only to be labelled with our own appropriate number and we knew that we should find them in our own room at some unknown hotel, perhaps a hundred miles away, that evening. The enduring impression that we shall always carry with us is that Denmark is a land of sound and inspiring architecture, and of overflowing kindness and hospitality, and we can only look forward to seeing our Danish friends on this side of the North Sea. We like to feel that when we left we did not only say good-bye (with musical honours) as party to party, but as friends to friends with a real personal affection.

The British party included Mr. and Mrs. Manning Robertson, Mr. and Mrs. Kenyon, Messrs. L. H. Bucknell, E. R. Jarrett, W. Lewis, H. J. Birnstingl, L. H. Glencross, W. Aumonier, M. Tha Tun, A. Allen, R. Willis, C. H. James, A. Bryer, Cecil Smith, N. Good, F. R. Yerbury, Misses D. Lewis, J. E. Townsend, M. F. Rigg, M. F. Ellis, I. M. Chambers, E. Meikle, C. W. Preston, and Mrs. Dawson. Mr. Oliver Hill joined the party at Copenhagen.

King's College, Cambridge.

We illustrate the design for new buildings at King's College, Cambridge, a first instalment of which, comprising the completion of the unfinished corner of Bodley's building and extending east as far as the existing Provost's Lodge, has been approved by the College and will be put in hand. Additional accommodation has been considered for some years, and the College is to be congratulated on having obtained this dignified solution of the difficult problems presented to the architect by the familiar riverside setting and the monumental character of the surrounding buildings.

The completion of Bodley's building which was left unfinished in 1891, provides for the immediate needs of the College and becomes the starting-point for the later developments, which are to include a new library and Provost's Lodge. The third wing, as designed by Bodley, would have extended to the river, with the inevitable Gate Tower as its central feature, for which the site seems to provide very little pretext. The curtailment of the proposed wing, and the introduction of an important entrance in the main block facing west, is well calculated to emphasise the orientation which prevails among the principal buildings in this region of the Backs, and which brings the wooded depths

of the left bank of the river into effective account. A landing-place and an approach from the river are suggested in connection with the new entrance, which gives access to an important corridor penetrating the building as far as Webb's Court, a treatment which could undoubtedly be used to invest Bodley's work with a significance in the landscape which features of its own could hardly have supplied. The extension of the formal treatment on this axis across the river in the direction of the new iron gates, as indicated by the architects, who, we understand, would like to see the existing backwater developed on these lines, would be a further contribution. When Bodley's building is completed, to the slowly-moving eye-point which the course of the Cam suggests, the gradual emergence of the new block standing back as a recessed screen, and giving the spaces of the lawn their full value, should have a certain fascination of its own.

The new buildings as contemplated provide for forty-two new sets of rooms, a bath installation, College offices, a library of increased capacity and a new Provost's Lodge. The existing lodge, which was planned by Wilkins in the somewhat bewildering Gothic of his day, covers some 8,000 sq. ft. of ground and is unsuited to the needs of the head of a college of our own time.

Messrs. G. L. Kennedy and F. B. Nightingale are the architects.

The New Gallery Kinema.

This theatre has been rebuilt on the site of the old one, but with considerable extension at the rear and elsewhere, and with a spacious balcony, which reaches back to the Regent-street façade.

The design and decoration throughout have been worked out with scrupulous care and on very definite lines. All the work has been put into expert hands, and the materials and craftsmanship are of a quality rarely found in theatre building.

The entrance from Regent-street is crowned with a semi-dome of Sienna marble supported on bronze beams. The plaster reliefs were modelled by Mr. Frederick Lessore, and the painted figure frieze which runs round the auditorium below the balcony level is the work of Gertrude Halsey. The design of this band is of extreme delicacy. The proscenium curtains, carried out by Mr. Charles Treleaven, are equally worth noting on account of their design and good workmanship.

The colour scheme consists broadly of a rich blue panelled base reaching to the underside of the figure band, which, representing a Greek festal procession, is 4 ft. deep. Above this the walls are panelled and treated in varying yellows. The ceiling is beamed, with the soffits delicately designed and painted, the general colouring being blue and brown. The whole scheme reaches a climax in the massive gold proscenium, with its heavy gold fret on a black ground.

The general contractors for the main work were Messrs. Wm. Downs, Ltd., part being executed by Bovis, Ltd. The sub-contractors were as follows:—J. Jeffreys & Co., Ltd., ventilation; Anselm Odling & Co., Ltd., marble; The Birmingham Guild, Ltd., ornamental metal work; Crittall Manufacturing Co., Ltd., metal casements; Diespeker & Co., Ltd., terrazzo; Stuart's Granolithic Co., Ltd., flooring; Clark & Fenn, plaster; Comyn Ching & Co., Ltd., brasswork; R. A. Evans, Ltd., Leices'er, lifts; Permanent Bronzing and Restoring Syndicate, Ltd., bronzed iron rails; Kershaw Projector Co., Leeds, projectors; H. Lazarus & Son, Ltd., seating; Bulman Cinema Screen Co., screen; Walter Pearce, Wurlitzer organ; J. Evans, sanitary work; Chalwin & Co., ironwork; Lawford & Co., asphalt.

Messrs. Nicholas & Dixon-Spain, F.F.R.I.B.A., are the architects.

The New Canadian Headquarters, London.

The various departments of the Canadian Government in London, hitherto distributed over the Metropolis at points as far apart as Basinghall-street in the City, and Oxford-street and Regent-street in the West, have now been concentrated in the building occupying the greater part of the western side of Trafalgar square, formerly the Union Club, which, opened by the King on Monday last, has been reconstructed from the designs of Mr. Septimus Warwick, F.R.I.B.A.

The original building, designed in 1820 by Sir Robert Smirke, was added to by Mr. Macvicar Anderson some 30 years ago, and at the beginning of this century Sir Arthur Blomfield made many interior changes. In the reconstruction of the building to serve the purposes of the Canadian Government, Mr. Warwick found it necessary to construct at the back of the building an entirely new wing six stories high, and entirely to remodel the rest of the work.

The ground floor is now open throughout, with space allocated as visitors' reading and writing rooms, inquiry offices for the various departments, and for other purposes. The staircase existing when the building was taken over has been retained, but new panelling has been added to the walls in keeping with the rooms that now open upon it. A new passenger lift has been provided, giving access to both the old and the new portions.

The entrance has been removed to the Cockspur-street frontage, giving a vista of over 100 ft. in the interior. The Cockspur-street front, with its portico supported by four Ionic columns, is entirely new. A feature has been made of the bronze entrance doors, into which has been introduced as a motif in the design the Canadian emblem of the maple leaf. The Trafalgar-square front has been refaced with stone to match the Royal College of Physicians adjoining, so that the whole side of the Square becomes now one distinctive facade, harmonious both in design and in material.

Canadian maple and birch flooring has been used in the upper floors, with British Columbia fir doors; the flagstaff over the main entrance also came from British Columbia.

Following is a list of firms who participated in the reconstruction:—Trollope & Colls, Ltd., general contractors; Aston Construction Co., Ltd., steelwork contractors; Diespeker & Co., Ltd., hollow floors; Fenning & Co., Ltd., marble; Waygood Otis, Ltd., lifts; St. Aldhelm box ground stone, quarried and worked by The Bath and Portland Stone Firms, Ltd.; H. H. Martyn & Co., Ltd., stone carving; Bromsgrove Guild of Applied Arts, bronze doors, &c.; The Seaman Kent Co., Toronto, birch and maple flooring; The Office Speciality Co., Ottawa, furniture.

ASHLEY PARK, WALTON- ON-THAMES

THE fete to be held within these precincts on July 8 in aid of the local Cottage Hospital offers a favourable opportunity to inspect a little-known but remarkably interesting house and park. Formerly Ashlees Park, it has been recorded as a Crown property, and, in the early part of the seventeenth century, passed to the Earl of Anglesea, brother of the ill-starred Duke of Buckingham. Field-Marshal Lord Shannon bought the property in 1718. He is memorised in an imposing monument by Roubiliac in the village church of St. Mary.

The original building is a Tudor H. plan. A mellowed brick fabric, its moulded stone-coped gables, stone-mullioned windows, great chimney breasts, and stacks on the south front, are relics of this period. There is also the Tudor expression in the pointed vault of the hall and treatment of the ceilings of a suite of rooms on the first floor. Scattered gems of Tudor craftsman-

ship—an improvised cupboard, panelling that peers from behind modern wall-paper, a fireplace of richly-carved oak in one of these southern rooms—cause the thoughtful to conjure up their former jewelled setting, perhaps to envisage a gallery of splendid extent on the long south front.

Lord Shannon seems to have accepted the architectural terms of his day and set about the modernisation of Ashley Park accordingly—in the Georgian expression. It is significant that the converse process is to-day attempted in the retention of the atmosphere of existing fabrics, and not in its eclipse. Be that as it may, the Georgian manner of these renovations is sustained by a balance of scholarly detail and excellent craftsmanship. Panelling covers the walls of the hall and the ceiling is the field of display for heraldic devices. The staircase is spacious and easy of ascent, has ample landings; the painted carvings of the ramp and strings are of oak. The decoration of the walls and ceilings is handled in arabesque and architectural conventions.

But the mullioned windows of the ground and first floors have been removed and sashes have been inserted. And the conversion of the southern rooms on the ground floor into a ball-room has produced a chamber of immense length, but of inadequate width and height. The ball-room is lined from floor to ceiling with panelling enhanced by Corinthian columns, presented in beautifully-considered detail. As an early Georgian example this room is worthy of much study. William Kent was probably the architect responsible for the marble chimney-pieces. His handiwork is noticeable in the north wing and suspected again in the bay windows of the east and west facades. By the intrusion of a modern stone wing—a dining-room with a superimposed billiard room—the original concept is damaged, and the light formerly enjoyed from one of its open quads is lost.

The open space of this old park, its matured trees that gently touch the imagination, induce a sense of serenity and peacefulness. Here is something expressing the high purpose of creation that conveys its fragrance to the mind.

PHILIP WEBB AND HIS WORK.—VII.

By W. R. LETHABY.

THEORY OF ARCHITECTURE.

'Beauty lives with kindness.'

—Two Gentlemen of Verona.

If you try to find out what a modern architect has 'the will to believe' it is likely to appear something like this—Architecture is the supreme Art: it is produced by genius. An architect must be a genius. Moreover, there have in the past been wonderful manifestations of art-genius called Styles, and the architect must know about these, that is, about one or two of them which he may select, and he must imitate the features of those. True architecture addresses itself to an æsthetic faculty, and æsthetical satisfaction is obtained by handling the style elements in a tactful and tasteful way in architectural designs.

For Webb this would not do; he was endowed with an inquiring mind, and he needed a General Theory for his belief, a ground on which to stand, a foundation to build on. We often discussed the question and I put down here what I understood of his teaching under a dozen headings.

Common Tradition.—Architecture to Webb was first of all a common tradition of honest building. The great architectures of the past had been noble customary ways of building, naturally developed by the craftsmen engaged in the actual works. Building is a folk art. And all art to Webb meant folk expression embodied and expanding in the several mediums of different materials. Architecture was naturally found

out in doing; it is the very opposite of the whim "designs" we are so excited about exhibiting. In a word, architecture is building traditionally.

There can be no arts of the old kind until by some means folk traditions are once more regained so that builders and employers accept the natural expression of the moment. "Till the employer knows clearly what the architect is going to do for him no reasonable building will come about."* All style-imitation is trivial and futile. "It is patent from the laborious efforts of well-meaning architects, from the time of the younger Pugin to that of the late Mr. —, that they have worked on a sand-hill. Many of the results indeed are childish efforts which only call forth contempt almost before the scaffolding is removed from such wasted labour." The spirit essence of such designs in the styles has nothing whatsoever in common with the natural work of old builders—"father to son witnessing of undoubting endeavour."

The works of Morris and of Burne-Jones have often been spoken of as "mediæval," but they were not intended to be, nor were Webb's. All tried to be modern. Ruskin finely spoke of Burne-Jones's 'true relation with the paternal and everlasting Art in the world.' Burne-Jones said of Morris: 'All his life he hated the copying of ancient work as unfair to the old and stupid for the present—only good for inspiration and hope.' Morris

* Quotations in this form " " are from Webb; others are given thus ' '.

said of himself: 'I cannot think that I ever consciously aimed at any particular style; I by nature turn to romance rather than classicalism and naturally without effort shrink from rhetoric.' By 'romance' he did not mean the mediæval; at a lecture I heard him say 'by romantic I mean looking as if something was going on.' It was making an effort in the present instead of pretending that something past had been perfect. Webb wrote to me on the death of a gifted mediævalist architect, "True, X— has been a disappointing man. W.M. recognised that he had 'taste.' He was always shy on the road, and harnessed himself with blinkers—has it not been from fear, the opposite of divine courage?" "Harnessed himself with blinkers!" the phrase bears repetition. Webb intended to see clear and straight; he had his eyes set on being rational and of his own time.

October 18, 1901: Having been asked to express an opinion on the stipulation for the Liverpool Cathedral competition "that the style of the new Cathedral shall be 'Gothic'" (1), he replied that "the restriction has something of the visage of humour in it. The nature of Classic, Gothic, and 'squaring the circle' can hardly, so to speak, be 'tasted in a sip.' Were any of the designs made for the earlier Liverpool competition as 'Gothic' as St. Sophia, or St. Vitale, or St. Paul's?" . . .

In a letter to Mr. Percy Wyndham, in answer to some kindly appreciation of his work at Clouds, and speaking of it as "the house of the age," Webb replied:

July 20, 1886: "There are two classes of houses which would rightly come under the title. The first is the majority one, the natural style of a 'shoddy period,' of which the houses in Tyburn, Belgravia, Victoria-street, etc., and their kind in the country, give the type which might be called Victorian. The second is the non-natural class, of which the mediæval style is represented by the Law Courts, the scholastic by the British Museum, the showy by the Club houses, and the dilettante-picturesque by the so-called Queen Anne style. All these styles are exceedingly artificial and have been run to death by fashion. As to my 'keeping people at arm's length,' if what you hint at thereby is true, it would merely be that I do not lay myself out to do work for people who do not in any degree want what I could honestly do for them."

Building Craft.—Of a gifted young man he wrote: "Poor young X— carried on the crest of a wave to a frowning coast whitened with professional bones. What can an infant almost in arms do under such malice of fate? Y— can hardly help him to mastership in the building craft." Modern architecture, if we ever have any, will be *Mastership in Building-craft* developed out of contact with needs and materials. It won't be design in the air; it will not be what he called "swell-domania." I asked Webb why Morris gave up architecture. "Because he found he could not get into close contact with it; it had to be done at second hand." The beginning of training for building and design must be on the works and in the shops. Architecting is a responsible business, like commanding a ship. Building is an art of doing. The architect cannot learn all the ways of workmanship, or may not master even one craft, but actual doing is necessary at the foundation to give a direction to the mind. The skilled foreman with an all-round instinct for the building crafts was only apprenticed to one of them; the architect should be an upper foreman. The best that Webb knew of building he would say had been gained in discussions with workmen. "Of course the craftsmanship part is a hard qualification for an architect in our own blind-guided days." He was deeply interested in limes and mortars, the proper ways of laying roof tiles and forming chimneys, of finishing plaster ceilings and mixing whitewash. He forced himself to become an expert in ventilation and drainage. On his making an inspection of a new drainage system he said: "Now this is so beautiful I don't like it to be covered

FIG. 1.—No. 1, PALACE GREEN, KENSINGTON.

up." In heating he was quite an authority, and he devised some excellent grates. He had a turn for experiment, his training in a country office was much more builder-like than anything now obtainable; the work of the Morris firm had increased his practical experience, and some actual modelling, wood engraving and decorative painting had helped, but all, he felt, was insufficient.

To A. H. Powell, March 17, 1894: "It would be good fortune for you if you could so arrange things as to have a year's continuous work at carpentering in its various kinds. Of course I know this may be impossible, but if so I should say that would be a misfortune. As you would be keeping your eyes wide open to all collateral things, you would pick up much general knowledge of the various other crafts connected with building and would gain much more help to your after work than in any other way. . . ."

To A. H. P., March 28, 1894: "If you can get the experience of a twelve months or so in a live workshop, and the outlying buildings, you will be saved a constant series of troubles in your future work. It has only been by constantly keeping my eyes open, talking freely whenever possible with all kinds of workmen, and reasoning out the knowledge gained that I have had any professional peace of mind for the last forty years. Three parts of the striving under conscious ignorance would have been avoided if I had 'served' as you are now doing. Mind you, you too must—if you would be wise in future—keep your eyes open. Keeping the eyes shut is just the trap into which regular workmen fall."

To A. H. P., December 3, 1898: ". . . I rather question if Aberthaw lime was quite the best for the outside plastering in question: my experience of that lime is that it is too sharp, and I should think liable to shrink. I never actually used it, but tried an experiment with it and concluded to use blue lias instead. I should not wonder if there are fine hair-cracks in it, not readily discernible with the nude eye. Perhaps and if this is so, two or even three coats of hot lime and Russian tallow might fill up these pores and keep the rain from being absorbed by the plaster. You see when the walling is dashed with rain by a high wind it becomes very wet, and the wind acts as hydraulic pressure. In the house I am building at Puttenham the bedroom walls, which are of brick-and-half thickness, have the full exposure of the S. and W. winds and rain, so that I feared penetration, and rough-rendered the outer face of wall on those two sides with Portland cement and sand, and then plastered and rough-casted. . . . The above may not help you at all, and if so I shall be sorry, as I like helping lame dogs over stiles, and being so helped myself."

Webb's thought on this matter of craft practice is well brought out in a letter to the Art Workers' Guild in 1892: "After much indecision I have concluded not to accept the honour. It would be too long a business to tell all the reasons, but the one that has helped me to a decision is that unfortunately I am not a craftsman and I am too old to set about making myself one. I find a large proportion of the members are architects, a number of whom are young enough to become craftsmen and to lift the 'profession' out of the slough in which it sticks. Painters have the advantage of being craftsmen already and they will as times improve be able to work in a broader way than the present demand will allow. The other crafts are numerous and all will, I hope, be able to drop the misleading title of 'designer.'"

All the glorious building works of the world were wrought by work-masters who had learnt their craft by practice and perfected it by further practice. Now that it is taught that architecture is a matter of recombining on paper features learnt from old styles mixed according to taste, it is not seen that a paper architect is almost as absurd as a paper athlete. There are two ways open to anyone who would follow architecture. Webb and his better contemporaries would have said—learn

FIG. 2.—No. 1, PALACE GREEN, KENSINGTON.

to build; learn other things, too, of course, the multiplication table, for instance, and mechanics, planning and sanitation; but, above all, learn to build. Be clear about this at the beginning; there are two gates; the building shop and the architectural atelier, and it is difficult to be in two places at one time. There are two ideals, sound, honest human building, or brilliant drawings of exhibition designs.

Mr. Jack says: 'Houses that he built, beautiful as they are, in no way form the measure of his power; for, quite distinct from his actual performance as an architect, there was in him a most potent quality of silent influence. This influence had always one tendency: it removed "architecture" from the architect's office to the builder's yard and the craftsman's workshop. One remarkable quality was his keen perception of the proper ways in which all kinds of building materials should be used—it was a kind of instinct with him.'

Labour and pains.—We have heard so much of genius and of the ease with which genius works that we are likely to be somewhat impatient of labour and pains; indeed, a phrase of reproach is 'laboured art.' Webb did not bother about genius, but he was convinced of the need of carefulness and strenuous labour. "There is great danger that students will look on art as a trick to be learnt or found out. Work in any way satisfying can only come of hard pounding." Again and again he returned to the necessity of taking pains "and anybody can do that." Even evidence of care and consideration was so far good. About taking pains he would say that it was all he had been able to do for his art. He had, indeed, trained his powers of observation to an acute point. I once sent him a tiny Kodak print of Watts's bronze "Physical Energy" in Kensington Gardens, and in writing back

he said that "under a glass it appears not to have been worked over the surface after casting, and I think it better so."

To W. R. L., September 17, 1903: "The Yorkshire proofs of your journey done by Kodak interested me much. I got out Ordnance maps and found Bainbridge-on-Bain, and it feeding Eure. The Roman road is ideal. . . . Being a little Englander the two Lincoln statues [the Church and Synagogue of the South Porch] consoled me. . . ."

EARLY WATER COLOUR DRAWINGS.

English water colour art is a subject of perennial and increasing interest as we get to know more of those who were amongst its pioneers. Mr. Walker has for years made it his object to discover and collect examples which illustrate the fine qualities of this beautiful native art of ours. The current exhibition at the Walker Galleries in Bond-street is of almost exceptional interest from the exhibition of examples by some almost unknown men. We suppose the general public hardly recognise the name of J. Skelton, yet the ten drawings by him in this exhibition include one of a wonderful quality—the view of Castle Gaudolfo and the Lake of Albano; the atmosphere and plane values in this drawing are something of a revelation for a water colour dated 1758. For perfect accomplishment one could see nothing better than the marine subject (112) by S. P. Jackson. A little drawing full of tender light and feeling is Mr. Havell's Moat House, Appleby (95). Of this kind the rough seas by H. B. Carter (see Nos. 22 and 26) could hardly be excelled. The masterly handling of architecture by T. Shotton Boys, in Envermure (9) and in Walton's two fine drawings, some delightful things by De Wint and Varley, are to be found in this exhibition of over two hundred drawings.

ANNUAL CONFERENCE OF THE INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

THE fifty-second annual conference of the Institution of Municipal and County Engineers was held last week at Harrogate, nearly 800 delegates attending. The annual general meeting was presided over by the President, Mr. G. F. Carter, and the annual report and balance sheet were adopted. Mr. Carter also presided over the statutory annual meeting, when the Mayor of Harrogate welcomed the Conference. The Chairman, in introducing the new President, said it gave him great pleasure to hand over to another Yorkshireman—Mr. Frank Massie, M.Inst.C.E.—the office and badge of president.

In his presidential address, Mr. Massie referred to the question of regional water boards and regional town-planning committees, saying he thought the formation of the former would be found to be imperative. It was not advisable or necessary that large sources of water should be set apart for a particular town until its population required them, while smaller bodies with more immediate necessities were seeking for supplies in vain. Apparently nearly every large gathering ground was now being rapidly absorbed by some large city, and he thought it would not be long before recourse would have to be made in greater measure to underground sources. The adoption of regional town planning would be of public advantage. For some surveyors it would mean a sacrifice of personality, but the advantages were so manifest that they must be content to efface themselves. In a reference to building by-laws, Mr. Massie said he was afraid the Health Ministry was making a mistake in enforcing the weakening of existing by-laws, the stringency of which was by no means the cause of the decline in the building of working-class houses.

The afternoon session was held in the Royal Spa Room, when Sir Henry P. Maybury (Director-General, Roads Department, Ministry of Transport) said they would doubtless expect him to deal with at least one important aspect of local government—that of road transport and the maintenance of its permanent-way and bridges—and to give them his impressions of the present position and for the immediate future. At no time in the nation's history had so much attention been paid to roads and road transport as since the days of the war. Those had been extremely strenuous years for the municipal and county engineers, the intensity of their endeavours being largely occasioned by the necessity of putting in hand large public works in order to mitigate the evils of unemployment. While he would be a bold man who could claim that for all the moneys thus expended for relieving unemployment full economic value had been secured for the community, they had, at any rate, had the satisfaction of feeling that they had done something in the way of finding useful and productive work for a large number of men.

The Ministry of Transport had, with the co-operation of the local authorities, put in hand useful works representing in the aggregate fifty-four and a half millions of money. Notwithstanding all that had been done, however, and all that was in hand, he was by no means satisfied that they were keeping pace with the demands which road transport would make upon them during the next decade. "This is an age of travel," said Sir Henry, "and it would seem as though there is a spirit of unrest abroad which appears to keep people continually on the move." The figures of the number of people travelling day after day were stupefying. All mechanically propelled vehicles, with the exception of road locomotives, motor ploughs, and tramcars, had increased, while the total number of licences issued for the first three months showed an increase of 15.1 per cent. on the corresponding period of last year. A gratifying feature of the licensing returns, he said, was in the reduction of the number of traction engines, which were slowly being superseded by lighter and more speedy forms of transport. In an industrial country, it was

probably essential in the interests of trade that these large road locomotives should continue to be used for heavy and indivisible articles which could not be accommodated on the railways. With the help of the Press, he would like to invite all those engaged in heavy traction work, and particularly his showmen friends, to have their engine wheels fitted with rubber tyres, which would not only save undue damage to the highways, but would reduce maintenance charges of costly engines. The matter had been engaging the attention of the Ministry of Transport, and he was going to invite representatives of the Traction Engine Owners' Association and of the Showmen's Guild to meet him to see whether they could not come to terms by which engines would be fitted with rubber tyres.

It was regrettable that so many cases of road accidents had to be recorded week after week. If "safety first" principles could be impressed upon every user of the road, he was confident that the number of accidents could easily be reduced by 75 per cent. Inquiries made by the Divisional Road Engineers all over the country went to show that carelessness and thoughtlessness account for by far the greater number of the accidents. Speed was not necessarily dangerous, but every vehicle on the highway should be driven in such a manner, and be under such control, that it could be pulled up when the necessity arose with perfect safety. Were they keeping pace with the requirements on the road? He feared that if the increase in mechanically-propelled vehicles continued, the roads would not be sufficiently commodious for them.

Local authorities should endeavour to improve all the important roads in rural districts, but those necessary improvements would be long delayed if they could only be undertaken year by year as financial provision could be made out of the Road Fund and the local rates. He visualised that at no distant date the movement which had been made under what was known as the Trunk Road Scheme, would have to be extended so as to comprehend a very much larger mileage of improvement work than had hitherto been undertaken. After dealing with the matter of road costs, he said he recognised and appreciated the ever-increasing and exacting duties that the revolution in modern transport had put upon municipal and county engineers and their staffs. He would suggest that in the interests of the ratepayers and of the Minister of Transport it would be well if the whole position could be reviewed, not only with a view of making the emoluments commensurate with the financial importance and magnitude of the work undertaken, but also with a view of seeing that the chief officer was provided with competent and adequate staffs, so that he might be relieved from detail, and thus have more time to devote to the things that really mattered.

Mr. C. E. Rivers, A.M.Inst.C.E., Borough Engineer of Harrogate, presented a paper in which he dealt with works and undertakings which have placed Harrogate in the forefront as one of the leading spas and health resorts in Europe. Having described these features in detail, Mr. Rivers mentioned that, owing to the inadequate covered accommodation in the Valley Gardens, the need for which has been especially felt during the inclement weather of the last two or three seasons, the Corporation is considering the erection of a covered pavilion in the grounds. "Plans have been prepared," he proceeded, "from designs of the Deputy Borough Engineer (Mr. L. H. Clarke, A.R.I.B.A.), which provide for a building on the west side of the present tea house, to accommodate about 1,000 people. The plan consists of a central space of 60 ft. square, with dome light over, with a platform for the orchestra placed on the north side. On each side of the central space is a wing 6 ft. wide and 70 ft. long, terminated by semi-octagonal bays 24 ft. wide. On the east end of the building is the caterer's department, with facilities for serving refreshments to persons inside the building, and advantage has been

taken of the fall in the ground to provide additional accommodation for the caterer approximately at ground level, and this will be used for serving the people sitting out in the gardens. The total length of the building is about 200 ft., and the maximum width in the centre about 75 ft. One of the chief objects kept in view during the designing of the building was the provision of ample windows, and to so arrange these that they may, during congenial weather, be drawn to one side, and so give an uninterrupted view of the gardens as far as possible, and so give one the impression that, whilst protected from the elements, they are still in the midst of the garden, and enabled to enjoy the fresh air and scenery. The building has been designed on simple lines, the introduction of the detached Roman Doric columns in the side wings and central features, together with piers at the angles of the building, giving the amount of 'solids' which in a building of this character is essential to balance the somewhat large area of 'voids.' The central dome is built up on a skeleton of steel framing, the base supporting of the dome being covered with copper sheeting, and the dome itself being of patent glazing with bold copper moulded ribs, giving light to an internal dome of less diameter. The roof over the side wings will be flat, with large counterlights at the extreme ends of the building, and the roof will terminate in copper-covered turrets. The construction of the building generally is built up upon a framework of steel, and clothed in patent stone of imitation Portland or Ketton stone. The floors throughout are of reinforced concrete, the principal floor being finished with wood-block flooring. The windows, as previously mentioned, are intended to fold up close to the columns, and are to be carried out in polished teak with leaded lights."

On Thursday the delegates visited Fountains Abbey, the Roundhills reservoir of the Harrogate Corporation, where luncheon was served, and also the Leighton reservoir of the Leeds Corporation. In the evening the annual dinner was held at the Grand Hotel, upwards of five hundred members and their ladies attending.

Belfast Branch Library Competition.

(See p. 17.)

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—ED.

Pre-cast Concrete.

SIR,—A building upon which I am at present engaged includes a large number of plain pre-cast concrete blocks as dressings between the windows of two floors. They are being cast in boxes, of which there are a few of standard size, and the blocks are turned out and stored as soon as they are set. This appears to be a long process unless the boxes are multiplied at some expense. Can any of your readers suggest an economical way of speeding up this work?

"ACCELERATE."

Cracking Asphalt.

SIR,—An asphalt flat laid by a well-known firm of specialists on boarding and felt, in two layers finishing 1 in. thick, has shown signs of cracking after two years' wear. I am satisfied that the timbering to the sub-structure is adequate, and am further covered by the specialists' guarantee which they do not question; but as I know of so many asphalt flats laid on timber work that have not failed after longer wear, I should be very much interested to hear of any rules that should be observed in such work, and which may not have been followed in this case.

"PUZZLED."

Blistered Paint.

SIR,—Some old blistered paint recently rubbed down and re-painted shows signs of again blistering after a very short interval, and apparently in the exact positions of the old blisters. Can you advise me what should have been done to obviate the appearance of this trouble and what might now be done to overcome it?

"AMATEUR."

Removing Old Varnished Paper.

SIR,—I should be glad to be told what is the best way of removing old varnished paper from walls intended to be redecorated. The walls in question seem quite impervious to the scraper, and the original varnishing must have been made an excellent job.

"REPAIRS."

Rolling Margin.

SIR,—Can you inform me what is the recognised percentage allowance for rolling margin in structural steelwork, and what is the maximum variation allowed in cuttings to dead length?

"STUDENT."

Electric Lighting.

SIR,—I should like to know of any rough-and-ready rule by which may be calculated the number of lamps of a given power required in a given area of an open, uninterrupted warehouse floor. I have no doubt that there are such rules though I am unable to find them in any of the better-known architects' handbooks.

"PLANNER."

Subsidy House.

SIR,—I have recently purchased a subsidy house for which the builder (not myself) received the subsidy. At the side of this house I have a piece of land 18 ft. frontage upon which I wish to build a brick garage. I have deposited plans with the local authority who have disapproved on account of the Ministry of Health stating "No house shall be granted the Government subsidy if a garage is included." (The subsidy

has been paid.) I may say the ground at side was included in the scheme for density purposes, but when purchasing no stipulation was made as to a garage.

My plan is absolutely in accordance with the by-laws. Would any reader be good enough to let me know what the position would be if I erected the garage, giving all notices to the local authority?

REGINALD J. SLATER.

Badminton Court.

SIR,—Please could any of your readers give me particulars of the best form of construction for a cheap enclosure for a Badminton Court?

R. JAKENS.

Old Paint.

[REPLY TO MESSRS. JARMAN & Co., JUNE 19.]

SIR,—Your correspondents will find that the readiest way of removing all but the last thin layer of old paint will be to burn it off with the blow lamp, and scrape down as far as possible. To avoid the possibility of damage to the fabric the last layer should be removed by means of a patent paint remover, the best of which consist of an alkali solution which softens the paint and renders it easily scraped away. After this has been used the surface should be washed over with a weak acid to neutralise the alkali. Any of the well-known paint manufacturers will give particulars and prices of such a paint remover.

"PAINTER."

Cast Ceilings.

[REPLY TO ECONOMY, JUNE 19.]

SIR,—I have myself recently attempted to produce on the soffit of a concrete floor, cast *in situ*, a surface such as is desired by your correspondent. I have found that it is not sufficient to use wrought boarding well cramped up together, as the wet concrete swells the boarding into such irregularities as to make the board marks too obvious. I intend to try the same construction but with the boarding covered with canvas, and am hoping that a matt surface will be produced in which the irregularities and board marks will not be apparent.

"EXPERIMENTER."

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

L.C.C. Housing.

DURING a debate on the London County Council (Money) Bill, Sir G. Hume said that instructions had been given to the L.C.C. Housing Committee to get ahead as fast as ever they could, both with housing and slum clearances. The Housing Committee was being attacked on all sides, but they were spending money as fast as they could get the work done. He agreed that in years gone by they had been very slow, but to-day they were all eager to see the slum areas of London cleared. The difficulty was to re-house under existing conditions. That was why it was necessary to go very slowly, after the clearances were made, in getting people out of their houses. He felt sure that the House of Commons would pass the present Bill, for two-thirds of the capital expenditure authorised by it was for housing purposes.

The Bill was read a second time.

Houses Built in London.

Mr. N. Chamberlain informed Mr. Day that during the 12 months ending December 31, 1924, 5,546 houses were completed in connection with schemes under the Housing Acts in districts wholly or partly in the Metropolitan Police District, and a further 4,908 houses were in course of construction on December 31. Precise information as to the number of non-parlour houses included in these figures was not

available, but it was estimated that two-thirds of the houses were of this type.

Similar information in regard to houses erected by private enterprise without State subsidy was not available for the period in question, but during the twelve months ending September 30 last the houses so completed were:—

Not exceeding £35 rateable value	10,162
Exceeding £35 but not exceeding £70 rateable value	3,954
Exceeding £70 but not exceeding £105 rateable value	426

Total up to £105 rateable value 14,542

On October 1 the following numbers of houses were in course of construction:—

(a) 5 rooms or less	3,845
(b) 6, 7 or 8 rooms	5,049
(c) 9 rooms but not more than 12 rooms	286

Total 9,180

Information was not available as to the average cost of land and development per house.

Houses for Employees.

Major Glyn asked the Minister of Health whether he would give effect to the principle that firms or public companies inaugurating factories or other businesses in rural areas should take into account the necessity of providing housing accommodation for either the total number of workers who would be engaged in such work, or a proportion of such workers; and at what proportion of the total number of houses he would be prepared to fix the quota required to be provided by such companies.

Sir K. Wood, who replied, said that while the Minister was anxious to facilitate by all means at his disposal the provision of housing accommodation for the employees of new undertakings, he did not think that it would be practicable to introduce legislation making the provision of such accommodation compulsory, or to fix a quota as suggested in the last part of the question. A considerable number of houses were already being erected by firms for their workpeople.

Rural Housing.

Mr. N. Chamberlain informed Mr. Paling that 2,241 houses had been authorised under the Housing (Financial Provisions) Act, 1924, to be erected in 355 agricultural parishes in England and Wales. Up to June 1, contracts had been let or definite arrangements made for the erection of 1,028, and of these 242 had been completed.

Sir K. Wood informed Mr. Foot Mitchell that the Minister was aware that there was still a shortage of housing accommodation in agricultural districts in common with the rest of the country, and the problem was receiving his serious and continued attention. Since 1919 some 75,000 houses had been erected in rural districts under the Housing Acts, and during the past two and a-half years over 53,000 by private enterprise, without the aid of subsidy. The Minister anticipated that increasing advantage would be taken of the special Exchequer subsidy provided by the Housing Acts for the erection of houses in agricultural parishes, and he had hopes that alternative methods of house construction would contribute something towards the housing needs of these parishes.

Schemes Approved.

Sir K. Wood informed Mr. Riley that 459 local authorities in England and Wales had so far received approval to schemes under the Housing (Financial Provisions) Act, 1924, the number of houses authorised being 61,484—59,947 to be erected by the local authorities and 1,537 by private enterprise. Of these 4,428 had been completed by local authorities and 33 by private enterprise on June 1, and 15,855 and 184 respectively were under construction at that date. He was advised that in general the rents charged approximated to the rents of houses erected under the Housing, &c., Act, 1923.

THE BUILDING TRADE.

BUILDING CONTRACTS

By W. T. CRESWELL, Lic.R.I.B.A., Assoc. (late Fellow) of the Surveyors' Institution, F.R.San.Inst., Barrister-at-Law.

THE ARCHITECT AND THE SUB-CONTRACTOR. PROVISIONAL SUMS AND PRIME COST ITEMS.

The Architect's Duties.

WHERE there is no written contract between the employer and the architect, and consequently no defined obligations, then, under the implied contractual relationship existing between them, the duties of the architect comprise the preparation of drawings, plans and specifications for the works contemplated, and the superintendence of their construction to a conclusion. In general the architect is the employer's agent in respect of all these matters; but he has no authority to waive, vary or dispense with any conditions contained in the contract made between the employer and the contractor, without the knowledge and consent of the employer. (See *Sharpe v. San Paulo Railway Co.* (1873), 1 A.C. 120.)

The Architect's Authority.

An act to be within the scope of the architect's implied authority must be an apparently necessary one, and one that arises out of the ordinary and customary discharge of his duties. Acts of an excessive or improper character do not fall within such authority. (See *Lord Bolingbroke v. L. B. of Swindon New Town* (1874) L. R. 9 C. P. 575, and *Bank of New South Wales v. Owston* (1879) 4 A.C. 270.)

Even when an architect is authorised to obtain tenders he must adopt the customary means of obtaining them. There is no implied authority that he can go further and enter into a contract on behalf of the employer, even if the tender received is within the price the employer is prepared to pay. (See *Hamer v. Sharp* (1874) L.R. 19 Eq. 108.) The architect has no authority to make new contracts for work wholly outside the contract or to employ sub-contractors as specialists, for if the work is outside the contract its terms do not apply thereto. So much depends upon the terms of the contract between the employer and the general contractor; and they must be fully considered in determining the question as to whom the sub-contractors are to look to for payment.

At no time is the architect a party to the contract between the employer and the contractor; therefore, if he exceeds his authority and orders works which are outside the scope of his authority as agent of the employer he may incur liabilities towards the contractor for breach of warranty of authority. And where without express authority an architect orders works on a sub-contractor to the general contractor, the employer is not bound by his architect's act, whether the work is original work or in the nature of a deviation on the general contract, for there is no privity of contract between the employer and the sub-contractor. Also in this last instance it appears that the architect does not incur any liability towards his employer.

Payments for Work and Materials.

The architect's authority to order extras depends entirely on the terms contained in the general building contract, or upon written or oral instructions given to him by the employer. He must not promise in the case of an entire contract that indispensable works will be paid for, nor must he make reductions in the work originally contracted for, so as to make up to the contractor for work included in the contract that has turned out to be more expensive than originally contemplated. Nor again must he promise or guarantee that payment will be made by the employer or the

general contractor to a sub-contractor. Of course, for it to be a guarantee, it must be in writing to comply with the statute of frauds, and the existence of such a memorandum, in the form of a complete contract, before action is brought, is essential.

Should the architect issue a certificate directly on the employer in favour of the sub-contractor, that does not entitle the latter to recover payments from the employer; nor can the employer withhold sums due to the general contractor in order to pay the sub-contractor, when the general contractor has unduly delayed payment to the sub-contractor. (See *Randall v. Trimen* (1856) 18 C.B. 786 and *Meek v. Wendt* (1889) W.N. 19.)

A new contract must be established to enforce payment by the employer, either by showing that the employer expressly or impliedly ordered the work, or that his architect acting within the scope of his authority ordered the work, or that the employer ratified his architect's orders, or that the employer accepted the work. (See *R. v. Peto* (1826) 1 Y & J, 37.) Acceptance of the work cannot be

implied from the mere fact of the employer or building owner continuing in possession of his own land and the work which has become part of the freehold. Nor does the use of the work by the employer imply a contract to pay for it. Communications or dealings between an employer and a sub-contractor may, however, amount to a contract. (See *Smith v. Rudhall* (1862) 3 F & F, 143.)

Hence generally in most building contracts the employer contracts with one contractor. The sub-contractor is, therefore, employed by the general contractor, and the latter is usually made responsible wholly or in part for any defects or delinquencies of the sub-contractor in the work. The general contractor should, therefore, expressly make the sub-contractor liable to himself.

In all such cases the architect, it will be seen, has no power to vary or alter the work included in the sub-contract or to give orders to, or direct, or control, the work of the sub-contractor; or to enter into any agreement with, or to accept any guarantee from, the sub-contractor; or to make substitutions for the work to be executed under the sub-contract; unless (always, of course, acting within the scope of his authority from his employer), the terms of the sub-contract give him power to do any or all of these things.

The sub-contractor is in all respects responsible to the one with whom he contracted, viz., the general contractor for the entire work; and to the latter he must look for payment.

COMPARISON OF PRICES OF BUILDING MATERIALS IN JUNE, 1925, WITH CURRENT PRICES

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—IX

IN our last article we considered the cases where there has been an alteration of the dominant tenement, or the windows in the same, and we showed that since the decision in *Colls v. Home and Colonial Stores* (1904, A.C. 179) there had been a lack of authority on the effect that decision would have in such cases. The questions thus involved will be found discussed on academic lines in the leading text-books, both as regards the right to light acquired at common law, and under the Prescription Act, but it is clearly recognised that they can only be the subject of individual opinion and that no authoritative view can be expressed.

Now that the test is whether a nuisance has been created, and, as we have shown at the end of our sixth article, that the light derived from sources other than over the servient tenement can also be regarded (see *Colls' case* and *Davis v. Marrable*, 1913, 2 Ch. 421), one of the most difficult questions is to what extent the enlargement of a window, or the addition of new windows in the dominant tenement may affect the right, at any rate as regards the remedy. For instance, the test being—has the room or building been rendered less comfortable and suitable for occupation or business, but the room or building having obtained increased light through a new or enlarged window (there being no prescriptive right to the light having access through the enlarged windows where they do not correspond with the old apertures, or through the new window), how is the test to be applied?

Mr. Coombe, in his well-known treatise on the "Law of Light," expresses his opinion in some closely-reasoned passages and comes to the conclusion that where the title to the light has been completed or established by action, the enlargement of a window, by reducing the susceptibility of a room to light nuisance, far from increasing the burden on the servient tenement, may tend to alleviate it and enable the servient owner to build nearer the enlarged window than he could otherwise have done, but as regards alterations made during the prescriptive statutory period he considers it is erroneous to pay any attention to the effect of the alterations upon the easement, and that the only question is, has the same access and use of light been actually enjoyed for the twenty years preceding the action—that is to say, have the provisions of the Act been complied with?

We do not here attempt even to summarise Mr. Coombe's conclusions, but must refer our readers to his work; but he admits that at the time he was writing there was no satisfactory authority on these points, and therefore only an opinion could be expressed, and in the following observations we are in the same position, and can only very diffidently touch upon the subject. In the first place, we would observe that a good many years have elapsed since the latest editions of the leading text-books on the law of light appeared (we believe we are correct in saying that Mr. Coombe's work is the latest, and that appeared in 1911), and therefore we venture to suggest that the continuing absence of cases on these points (for ever since the decision in *Colls' case* there has been a considerable reduction in the number of all cases relating to light brought in the Law Courts) in itself appears to imply that in practice a working rule has been discovered and that the tendency to raise fine points has disappeared. Before the decision in *Colls' case* the owner of a dominant tenement had been encouraged to consider that he had a proprietary right to all the light which entered his house, either through ancient windows, or to the extent of the old aperture through windows that had been enlarged, and when he was threatened with the erection of a larger building in proximity to his own, with its attendant disadvantages, he had every incentive to take steps to protect what he deemed to be his right and to seek to restrain the erection of the higher building. When, however, it was re-established by the decision in *Colls' case* that the obstruction

of light must be such as to constitute an actual nuisance the position became very different and a more or less concrete fact had to be established to obtain any remedy. What was the position then? If the owner of the dominant tenement has altered his premises, but in such a manner that he is still dependent upon the light derived through the old aperture, then, of course, it is very material for him to claim the right acquired in respect of that aperture; but if by enlarging his ancient windows or adding new windows he has succeeded in obtaining the same degree of light as before, or even an increased degree of light notwithstanding the raising of a neighbouring building, then, however the original right has been acquired, whether by grant or at common law or by prescription, unless the existing conditions show an actual nuisance, he would feel great hesitation in bringing an action on academic grounds. It is true that the new windows or the increased space of the old apertures would not become prescriptive rights as regard the access of light unless he could do so, but, on the other hand, the extent of the actual or threatened obstruction having become known to him this would not necessarily trouble him, as he would feel secure for the future. The owner of the servient tenement would, however, in the future have to consider his position as regards new windows or enlarged, as the right to light to them would be acquired by prescription.

It appears that *Colls' case* has certainly tended to lessen litigation on fine points in relation to light, and we may remind our readers we held this view when, in 1918, a Bill to amend the law relating to light entitled "the Acquisition of Light Restriction Act" was read before the Royal Institute of British Architects, and we commented upon it in our issue December 6, 1918, pointing out that *Colls' case* would lead to only a reasonable restriction on building, and that the law as thus settled would prove less irksome and operate more uniformly than would building restrictions which might vary in every district.

If we are correct in the observations we have made above it will be seen that the law operates on broader lines than was the case before the decision in *Colls' case*, both as to the extent of the right acquired, and also as to the remedy to be applied in cases of obstruction. With the remedies we shall deal in a subsequent article, but before leaving the points we have been considering we desire to suggest what appear to be the broad points to be considered where the dominant tenement has been altered. The first point would appear to be, are the alterations such as to indicate abandonment of the right or a destruction of the easement. In *Ankerson v. Conelly* (1897, 1 Ch. 678; *The Builder*, May 4, 1897) the alteration in the dominant tenement was held to have this effect (see Article VII). The second point seems to be, does the alteration increase the burden of the servient tenement? This was discussed in Article VII, and *Ankerson v. Conelly* is one of the authorities on this question. The third point, then, is, does the obstruction occasion an actionable nuisance to the premises as altered? and this appears the point of the greatest difficulty, especially under the Prescription Act. The claim can, at the highest, only be made to light having access through the old aperture, and the enlargement of an old window certainly must not increase the burden on the servient tenement; but if, according to the decision in *Colls' case*, to obtain a remedy actual nuisance must be proved, it would appear that the effect of an alteration in the dominant tenement, which increases the light having access to any of the rooms, may, in fact, operate to relieve the servient tenement of some portion of the burden and even to decrease what we may term the privileged area over which the light is derived. It will be noticed that the converse proposition was accepted in *Davis v. Marrable* (1913, 2 Ch. 421; see Article VI); the defendants were allowed credit for the

increased light caused by their having lowered some part of their buildings as against the obstruction caused by having raised another part of it; the light was regarded as a whole and the plaintiff failed to prove an actionable interference amounting to a nuisance.

We are speaking without authority in making the above observations, but if we are correct, we submit that whatever may be the strict interpretation to be put upon the Prescription Act in relation to this question, the decision in *Colls' case*, by reintroducing the test of nuisance has, in fact and in practice, put an end to the fine questions which were continually being raised in the Courts before that decision was delivered, and that it has therefore had a beneficial effect, practically removing the unreasonable restrictions on the development of towns and the erection of higher buildings and placing the law of light on a sounder basis. The idea that the owner of the dominant tenement has an actual proprietary right to any particular cones or pencils of rays of light coming in any particular direction over any particular portion of the servient tenement (see the head note to *Davis v. Marrable*) led to endless litigation, but now that the owner of the dominant tenement has only, so to speak, to look at home and see whether his premises are sufficiently well lighted for the purposes of occupancy or business, a practical test is afforded him of what is an actionable obstruction to, or interference with, his light, and he has no desire to litigate about abstract propositions. In our next article we propose dealing with the remedies for interference with the right to light.

NOTE.—In our last article there were three trifling misprints in column 1. In the first paragraph the word "and" should be omitted before the words "ancient lights." In the second paragraph the word "perspective" should read "prescriptive," and in the 22nd line of the same paragraph the word "the" should precede the word "question." In column 2 in the 35th line from foot the word "such" should precede the words "an interruption."

GLASGOW HOUSING AND HEALTH EXHIBITION

PROSPECTUSES are now ready for the seventh annual Housing and Health Exhibition promoted by the Corporation of Glasgow, and to be held in the Kelvin Hall, Glasgow, during the three weeks commencing September 23. All the principal features of previous exhibitions of the kind will be retained, and several new attractions added. Included in the latter will be a Wireless Section organised by the National Association of Radio Manufacturers and Traders.

The exhibits will include model houses, building material, &c., sanitary appliances and material, house furnishings, &c., lighting, heating and labour-saving appliances, house decoration and photography. The model houses and building material exhibits will comprise imitation stone, brickwork of various kinds, building tiles and blocks, concrete building slabs and blocks, cements plain or coloured, cement colouring, building timber of all kinds, timber preservative, damp-proofing material for damp-proof courses, ground flooring and walls, composition slabs, &c., Roofing materials will include felt, terra-cotta and composition tiles. Flooring material of all kinds, wall linings, ornamental plaster, wall tiles, composition board of all kinds, artificial wood, ceiling coverings of all kinds, doors and framing, window casements of wood or iron, glazing material, reinforced mosaic; flexible and Vita glass will also be included. There will be at least one model cottage of the very latest type shown in the exhibition.

The exhibition, which will open on a Wednesday and close on the corresponding day three weeks later, will be open to the public daily from 1 p.m. to 10 p.m. All particulars regarding the Exhibition can be obtained on application to Mr. Cecil Sommerville, General Manager, Kelvin Hall, Glasgow, C.3.

THE RATING AND ASSESSMENT BILL

PROGRESS seems slow in Committee on the Rating and Assessment Bill, and the reports in the press are meagre, and therefore, until the proceedings are concluded and the Bill as amended is printed, it is impossible to give any connected idea of the effect of the amendments.

The proceedings seem to be lengthened by the attempt to introduce wholly irrelevant matters into the Bill, which mainly follows the "Draft Bill" circulated last year. Thus on clause 2, sub-clause (3), which practically stands as in the "draft Bill," an attempt was made to add after the words, "Every general rate shall be at a rate at a uniform amount per pound on the rateable value of each hereditament," the words "mining royalties and site value," an echo from the past famous Finance Act of 1909-10; whilst on clause 4, sub-clause (4), amendments were moved, but rejected, in reference to the rating of unoccupied houses. As regards this latter series of amendments, the Minister of Health pointed out that the revival of housing enterprise was certainly not in a condition to receive any "fresh shocks," and that this was not the time to make experiments.

Clause 4, sub-clause (1), which provides that every rate shall be deemed to be made on the date on which it is approved by the rating authority and that certification by the justices shall cease, was the subject of discussion, but an amendment to retain certification by the justices was withdrawn.

Clause 4 is substantially as was the same clause in the "draft Bill" save for the introduction of a new sub-clause (5), which is as follows: "Where the name of any person liable to be rated is not known to the rating authority it shall be sufficient to assess him to the rate by the description of the 'owner' or 'occupier' of the premises (naming them) in respect of which the assessment is made without further name or description."

Clause 6 is also new and did not appear in the draft Bill. It provides: "Notice of a rate may, if the rating authority think fit, in lieu of being given in manner prescribed by section 2 of the Parish Notices Act, 1837, be given by affixing the notice in some public or conspicuous place or situation in each parish affected, or by publishing the notice in one or more newspapers circulating in the area of the authority, and different methods of publication may be used as respects different parts of the area of the rating authority." An amendment moved with the object of making action compulsory and not in the discretion of the authority was defeated.

The most important amendment appears to have been that which the Committee agreed to insert in Clause 7 (which is substantially the same as in the "draft Bill"), which deals with "demand notes for rates" as the amendment provided that the gross and rateable value should be inserted in the demand note, and when it differs from the rateable value, also the net annual value. Lastly, clause 8, sub-clause (1) was considered. This is slightly different from what it was in the "draft Bill," and provides: "As from the appointed day any precept issued by the council of a county which under any enactment or order in force immediately before that day is required to be sent to a board of guardians, and any precept which under any such enactment or order is required to be sent to overseers shall instead of being so sent be sent to the rating authority." An amendment to leave out the words, "the appointed day," and to substitute "Date on which the first new valuation lists made under Part II of this Act come into operation" was strongly opposed by the Parliamentary Secretary to the Ministry of Health and rejected.

Shortage of British Tiles.

The Housing Committee of Stone (Staffs) U.D.C. having failed to secure a sufficient supply of British tiles for their housing scheme at Parson's Field, have given instructions for French tiles to be used.

COURT OF APPEAL: ACTION FOR FEES

IN this case, heard on June 10, before Lords Justice Bankes, Scrutton and Sargant, the defendant, Mr. Richman, appealed from the judgment of Mr. Justice Sankey, awarding the plaintiff, Mr. G. H. Abbott, an architect, of Warwick-court, Holborn, W.C., £275 fees for work done.

Mr. Samuel Duncan, for the appellant, said that Mrs. Richman was minded to get a building agreement and erect a factory at Mare-street, Hackney, London, N., but was anxious that the cost of the building should not exceed £6,000. Her husband interviewed the plaintiff, and pointed out to him that his wife was not anxious to run into any unnecessary expense. In February, 1923, the terms were arranged between Mr. Richman and the plaintiff on which the latter should do the work. At first there was no provision for payment of any sum to the plaintiff for the scheme and sketch plans; but on March 15, at another interview, it was agreed that the plaintiff should have a sum of £10 10s. for preparing the scheme and sketch plans, and that if a factory were erected on the site he should act as architect, and that he should be remunerated at the scale of the R.I.B.A.

Lord Justice Bankes: What is the point in the case?

Mr. Duncan said that the £275 represented the plaintiff's fees on the abandonment of the work calculated on the R.I.B.A. scale, viz., two-thirds of the scale rate. He (Counsel) submitted that there was a special agreement between the parties and that payment to the plaintiff was to be conditional on the defendant obtaining a building agreement and upon the building being erected—that was the only contract ever made. Defendant was only to be liable to pay the plaintiff in the event of her obtaining a building agreement from the London County Council. It was in the contemplation of the parties that the matter might go off, and if it did the defendant was only to be liable for £10 10s.

Lord Justice Bankes said it appeared from the evidence given at the trial that the plaintiff was instructed to prepare the working plans, and that was not included in the £10 10s.

Mr. Duncan said it was impossible to prepare working plans until one had the building agreement.

Lord Justice Bankes said he did not share that view. Besides, the plaintiff said he was told to go on and prepare plans.

Lord Justice Scrutton said the Judge had awarded the plaintiff £275 on a *quantum meruit* basis.

Lord Justice Sargant said it appeared that the defendant adopted the preliminary plans, and then told the plaintiff to proceed with the work, and act as her architect.

Without calling upon Counsel for the plaintiff, their lordships dismissed the appeal with costs.

Lord Justice Bankes, in giving judgment, said that in his opinion Mr. Justice Sankey took quite the right view, and indeed the only view on the evidence and correspondence before him. All the contract between the parties provided for was for the performance of the preliminary work for a preliminary fee, and this was the view taken by the plaintiff, who pointed out that he could only act in accordance with the provisions of the Schedule of the Institute, which provided for payment on the abandonment of the work. The plaintiff had made his position abundantly clear, viz., payment for preliminary work, and after that payment according to the Institute schedule. The plaintiff repudiated the suggestion that he was to have nothing if the scheme were abandoned. The learned judge had found that the plaintiff, having established his case, was entitled to be paid, and he (the Lord Justice) agreed with him.

Lords Justices Scrutton and Sargant concurred, and the appeal was accordingly dismissed with costs.

WORKMEN'S COMPENSATION: CONTRACTS WITH FOREIGN EMPLOYERS

A POINT of some importance appears to have been decided by the Court of Appeal in the case of *Hunter v. Stadtische Hechsee-Fischerei Gemeinnützige Gesellschaft* (the *Times*, June 18). The applicant had been employed as a crew trimmer on board the defendant's vessel at Tyn Dock, South Shields, on February 15, 1922, when he sustained injury by accident, liability for which had been admitted and compensation paid down to June, 1922. The applicant was now claiming further compensation, apparently on the ground that the incapacity was permanent. The German company was in liquidation but notice of the application had been served upon the liquidator by registered post in accordance with section 2, subsection (3) of the Workmen's Compensation Act, 1906, and the company appear to have filed an answer which amongst other defences, raised the point that they were not within the jurisdiction of the Court. The County Court had dismissed the application on this ground. The Court of Appeal set aside this judgment and remitted the case to the county court for hearing on its merits.

The Court pointed out that these proceedings before an arbitration tribunal were not judgments coming within Order XI of the Rules of the Supreme Court, though there was provision for giving effect to them. Here the service was registered post under the Workmen's Compensation Act had been duly effected, and the liability of the employer attached to the contract of employment, and the County Court would proceed to measure it in proceedings which were not initiated by a process requiring the attendance of a person before the Court.

The Master of the Rolls, in his judgment, reported as having said, "The terms of the Act brought within its ambit all contracts of employment in Great Britain and gave a remedy against a probable liability against a non-resident."

We prefer not to comment on the case until it is fully reported in the law reports, but we may here point out that it is one thing to obtain an award against a person not in the jurisdiction and another to be able to enforce it. In the case of ships, the Workmen's Compensation Act, 1906 and the new Act of 1923 (see section 11 of the former and section 20 of the latter), contain special provisions enabling awards to be enforced by detention of the ship on the analogy of an "action in rem" in the Admiralty Division, and thus these awards can be enforced whenever the ship comes within the jurisdiction; but where the contract has been made in this country, and there is no property of the defendant in the country when the proceedings are brought, there may be considerable difficulty, except in the case of ships, in enforcing the award. We shall revert to this subject when the case is more fully reported.

General Electric Company.

AT the annual general meeting of the General Electric Company, Ltd., held on Wednesday last, the directors reported a successful year's trading. The net trading profits amounted to £1,029,983, an increase of £194,422 over the previous year. The Company's works, throughout the state, have been fully employed, and the demand in the Home market for the Company's products—telephone and wireless apparatus, lamp switch-gear, cables and general electrical commodities—has shown a steady increase.

Lambeth Housing Scheme.

The Lambeth Borough Council have now completed their arrangements for the erection of 30 houses on their Bloomfield Estate, at a total cost of £229,524. At the present time some 10 houses are in the course of erection, which are cost £66,851, but the Housing Committee have now considered tenders for the erection of other types of houses, and have agreed to accept a tender of Messrs. F. & H. F. Higgs, Ltd., builders of Station Works, Hinton-road, S.E., for the erection of 220 more houses and flats at a further cost of £138,990.

NEW BUILDINGS IN LONDON

Baker-street.—Messrs. Elcock & Sutcliffe, 21, Northumberland-avenue, W.C.2, are the Bank's architects for the reconstruction of the branch premises of the Midland Bank, Ltd., in Baker-street, W.1, and not as stated in our last issue.

Bayswater.—It is proposed to build a new church building on a site in Pembroke Villas, in Bayswater, W.2. Plans have been prepared by Messrs. Lewis Solomon & Sons, 133, Moorgate, E.C.2.

Bermondsey.—Plans have been prepared by Messrs. Leighton & Higgs, architects, 225, Long-lane, S.E., for the building of shops on the corner of St. James's-road and Trothy-street, S.E. The builders are Messrs. J. A. Franey & Son, 134, Southwark Park-road, S.E.16.

Bishopsgate.—A large block of office and shop property, equipped with lifts, central heating, &c., is to be built in Bishopsgate, E.C.3, at the corner of Houndsditch. The architects are Messrs. Richardson & Gill, 41, Russell-square, W.C.1, acting on behalf of the London and Northern Estates Company.

Brentford.—It is proposed to build a new Cottage Hospital at Brentford. The plans have been prepared by Messrs. Dodge & Reid, 120, High-street, Brentford.

Chislehurst.—A scheme for the erection of 50 houses is shortly to be embarked upon at Chislehurst. The architects are Messrs. Crickmer & Foxley, 1, Lincoln's Inn Fields, W.C.1.

Church-street.—The contractors for the new building for the Gas Light & Coke Co., Ltd., in Church-street, Kensington, are Messrs. John Greenwood, Ltd., of 12-14, Arthur-street, E.C.4.

City-road.—New works and warehouse premises are to be built in City-road, E.C.1, for the International Harvester Company of Great Britain, Ltd., Finsbury-pavement, E.C. The plans have been prepared by Messrs. Davis & Emanuel and H. S. Smart, Queen Victoria-street, E.C.4. The contractors are Messrs. Allen Fairhead & Sons, Ltd., Sydney-road, Enfield.

Croydon.—Extensions to their works in Katherine-street, Croydon, including the building of cleaning and repairing shops for the store departments, are under contemplation by the Croydon Gas Company. Plans will be prepared by Messrs. Harry Berney & Son, 33, High-street, Croydon.—A housing scheme is to be carried out in the district of Limsfield-avenue, Croydon. A start on a number of good class villas has been made by Messrs. Tysoe & Harris, Briar-road, Pollards Hill, S.W.16.—New branch bazaar premises are to be constructed at High-street, Croydon. Mr. W. A. Lewis, architect, 11, Finsbury-square, E.C.2, acting on behalf of Messrs. Marks & Spencer, Ltd., 21, Chiswell-street, E.C.2.

Dagenham.—Work is in hand on the site in Bennett's Castle-lane and Green-lane, Becontree, where it is proposed to build a row of shops with flats above. The builders are Messrs. T. N. Hughes, Ltd., Clements-road, Ilford. Mr. E. Meredith, A.R.I.B.A., 7, Goodmayes-road, Goodmayes, Essex.

East Ham.—Plans for a new Spiritualist Temple or Church, in Fourth-avenue, East Ham, E., have been prepared by Mr. J. Stanley Beard, 52, Baker-street, W.1. Mr. A. E. Symes, Carpenter's-road, Stratford, E., is the contractor.—It is hoped to place a contract in the autumn for the building of the East Ham War Memorial Hospital in Hilda-road, E., for which plans were accepted in public competition from Messrs. Mennie & Smith, 11, New-court, Lincoln's Inn, W.C.2. The building will accommodate 66 beds and cost about £80,000.

Fenchurch-street.—New shop fronts and fittings are to be installed at No. 48, Fenchurch-street, E.C.3. The contractors are Messrs. Courtney Pope & Co., Ltd., 339, Seven Sisters-road, N.15.

Greenwich.—A new nurses' home is to be erected at "The Woodlands," Vanburgh-hill, East Greenwich, for the Greenwich Board of Guardians. The architects are William A. Pite,

Son & Fairweather, 12, Carteret-street, Queen Anne's-gate, S.W.1.

Hackney.—The site at Nos. 372-374, Mare-street, E., has been acquired by Messrs. Montague Burton, Ltd., of Hudson-road Mills, Leeds, for the erection of a branch clothing shop and showroom, with flats or offices above. The plans will be prepared by Mr. Harry Wilson, Victoria Park-avenue, Kirkstall, Leeds.

Hampstead.—It is proposed to build a new School of Domestic Science at the Garden Suburb at Hampstead, N.W.11. The architect is Mr. C. W. S. Soutar, "Wyldes," North End, N.W.3.

Harrow.—It is probable that an extensive scheme of repair may be carried out at the Parish Church of Harrow. Sir Aston Webb, 17, Queen Anne's-gate, S.W.1, has been called in to advise.—The owners of the *Harrow Observer* newspaper, of Station-road, Harrow, are to build new offices, warehouses, and printing works on a site adjoining in Station-road. Plans have been prepared by Mr. S. Poynton Taylor, The Cottage, Roxeth Hill, Harrow.—A new palais de danse is to be erected in Northolt-road, Harrow-on-the-Hill, for Mr. W. T. Farr, 237, King's-road, S.W.3. The architect is Mr. S. Poynton Taylor, 58, Roxeth Hill, Harrow-on-the-Hill.

Hayes.—Messrs. Wheeler's Wycombe Brewery, Ltd., High Wycombe, Bucks, have had plans prepared by their staff architect, Mr. C. J. Hedges, for the rebuilding of their licensed premises, the "Carpenter's Arms," in Uxbridge-road, Hayes. Negotiations as to building lines are being considered.

High Holborn.—Plans are being prepared for an important scheme of interior reconstruction at the large emporium of Messrs. Thomas Wallis & Co., Ltd., drapers and furnisiers, in Holborn-circus, E.C.1. The work will be spread over several years and will be supervised by Messrs. Yetts, Sturdy & Usher, 115, Moorgate, E.C.2.

King William-street.—The old buildings in Clement's-lane, E.C.3, have been pulled down preparatory to the erection of the second portion of the large headquarters in King William-street E.C.3, of Messrs. The Standard Bank of South Africa, Ltd. The builders are Messrs. Walter Lawrence & Son, Ltd., 19, Finsbury-square, E.C.2. The architects are Messrs. Meaking & Archer, 73, King William-street, E.C.

Lambeth.—New business premises are to be erected on the site of Nos. 32-34, New Cut, Lambeth, S.E.1, to the plans of Mr. H. A. Wright, 35, Pentonville-road, N.1. The contract will be carried out by Messrs. A. Class & Son, 80, Chapel-street, N.1.

Leyton.—Mr. John Stuart, F.R.I.B.A., architect to the Essex County Education Committee, Chelmsford, has prepared plans for a new secondary school at Leyton, to cost £62,000.

Merton.—The site in Burlington-road, Merton, S.W.19, formed by the junction of the new Kingston by-pass road, has been bought by Messrs. Charrington's Brewery, Mile End-road, E.1. A public-house, to be called the "Duke of Clarence," is to be erected from the designs of Mr. Frank J. Potter, F.R.I.B.A., 24, John-street, Adelphi, W.C.2.

Mildmay Park.—A sum of £4,000 is to be expended on the rebuilding of the day schools of St. Jude's Church, at Mildmay Park, N.1. Mr. W. Charles Waymouth, F.R.I.B.A., Gwydir Chambers, 104, High Holborn, W.C.1.

Muswell Hill.—A large hall, with adjoining small one, is being erected at St. James's Church, Muswell Hill, N.10, to the designs of Mr. G. Grey Wornum, F.R.I.B.A., Blue Ball Yard, St. James's-street, S.W.1, at a cost of £10,000. The contractors are Messrs. Stevens & Sons, 14, Muswell Hill-road, Highgate, N.

Park-lane.—Chester Club, Ltd., has been formed, with offices at 143, Fleet-street, E.C.4, to purchase premises in Park-lane and to convert them into a club, restaurant, &c. The plans have been prepared by Messrs. Nicholls & Hughes, 4, Raymond's-buildings, Gray's Inn, W.C.1.

Peckham.—The Park Estate in Peckham Rye, S.E., is to be developed. New roads are to be built and about 80 houses erected to the designs of Messrs. Martin & Co., surveyors, East Dulwich Station, S.E.12.

Petty France.—Work has now started upon the erection of a large garage and repair depot in Petty France, S.W.1, for Messrs. Wolsley Motors, Ltd., Piccadilly, W.1. The builders are Messrs. E. A. Roome & Co., Ltd., 7, Urswick-street, E.9.

Pollen-street.—A new restaurant, with three upper floors for offices, is being erected in Pollen-street, W.1, by Messrs. Hall, Beddall & Co., Ltd., Waterloo Bridge, S.E.1, to the designs of Messrs. Forsyth & Maule, 12, Stratford-place, W.1.

Redhill.—It is proposed considerably to improve and extend the accommodation of the Redhill Picture Theatre. A new front is also to be added, designed by Mr. Leonard P. Rees, 53, Station-road, Redhill.

Regent-street.—A commencement has been made on the superstructure of the new Regent Arcade, which is to be erected on the sites of Nos. 252, 260, Regent-street, 19-25, Argyl-street, and Little Argyl-street, W.1. Messrs. Kirk & Randall, Ltd., contractors, 146, Grosvenor-road, S.W.1. Mr. S. Gordon Jeeves, architect, 16, Hanover-square, W.1. The quantity surveyor is Mr. W. H. Webber, 33, Farnival-street, E.C.

Gidea Park.—The Wesleyan Methodist Church Commission has purchased a site at Gidea Park, Romford, where it is proposed to build a new school-chapel, to the designs of Mr. S. Phillips Dales, F.S.Arc., 63, High Holborn, W.C.1.

Silvertown.—The Co-operative Wholesale Society, Ltd., Leman-street, E.1, have under consideration the extension of their Silvertown Flour Mills, E. Mr. L. G. Ekins, F.R.I.B.A., architect to the Society.

Snow Hill.—The Snow Hill Police Station, E.C., is to be entirely rebuilt for the Police Committee of the City of London Corporation. Plans have been prepared by the City Architect's Department, Guildhall, E.C.2.

Tooting.—A block of 14 flats is to be erected on a site in Blackshaw-road, Tooting, S.W., of brick construction, partly roughcast. The plans have been prepared by Mr. F. L. Poole, 29, New Bridge-street, E.C.4.

Victoria.—A further block of tenement buildings is to be erected in Horseferry-road, S.W.1, with frontages on Great Peter-street and Chadwick-street, for the Peabody Foundation. The architect to the Trust is Mr. Victor Wilkins, 12, York-buildings, Adelphi, W.C.2.

Wallington.—A block of land at the junction of Woodcote-road and Stanley Park-road, at Wallington, has been acquired by the Croydon Gas Company, of 18, Katherine-street, Croydon, for the building of new shops and showrooms, with flats above. The company's architects are Messrs. H. Berney & Son, 33, High-street, Croydon.

Welwyn.—A further large housing scheme is being carried out at Welwyn Garden City, and a patented system of concrete construction has been adopted. The contractors are Messrs. Welwyn Builders & Joiners, Ltd., Welwyn Garden City, the plans having been prepared by Mr. Louis de Soissons, F.R.I.B.A., of the Welwyn Estate Office.—The London & North Eastern Railway Co. have decided to build a new station, with booking hall, waiting and refreshment rooms, &c., at a cost of £35,000. The plans will be prepared by Mr. C. Brown, chief engineer, Liverpool-street Station, E.C.2.

Westminster.—Messrs. The St. Clement's Press, Ltd., Portugal-street, Kingsway, W.C.2, propose to acquire the St. Clement Danes Vestry Hall, in Westminster, S.W.1, for conversion into printing works and offices. Plans will be prepared by Messrs. Emden Egan & Co., 7, Garrick-street, W.C.2.

Weybridge.—The Weybridge Cottage Hospital propose to proceed with the erection of their new buildings, at a cost of £30,000. The contractors will be Messrs. George Jarvis & Co., Church-street, Weybridge. The architects are Messrs. Kenyon & Livock, 22, Surrey-street, Strand, W.C.2.

Wimbledon.—Messrs. Chart, Son & Reading, High-street, Croydon, have prepared plans for the building of a new Spiritualistic Church in Hatfield-road, Wimbledon, S.W., about 80 ft. by 32 ft. Mr. H. Hann, 40, High-street, Collier's Wood, S.W.19, is the builder.

THE RATING AND VALUATION BILL

THE proceedings in Committee in relation to the Rating and Valuation Bill have commenced, but they are very briefly reported in the daily press. Perhaps this is evidence that public interest is much more centred on problems of greater national importance such as industrial matters to which they would desire Parliament to turn its attention, and it seems unfortunate that the Government should have placed in the forefront of their programme this Bill which, though highly contentious, is not so pressing as other matters. To the "rate spending" authorities this Bill may be highly acceptable; the assessments are not likely to be diminished with the association of representatives of the Inland Revenue on the assessment committees, but to the ratepayers there are provisions in this Bill of the greatest importance, upon which they should be given the fullest information. In the forefront of these questions is the adoption of one valuation for all purposes and the substitution of a fixed scale of deductions from gross values in place of maintenance allowances.

It is important that the public should be kept informed of the proceedings on this Bill. In the *Times* (June 17) a short report was issued when clause 1 was passed through Committee. The proceedings are not reported in detail, but it appears that assurance was given on one point which has been discussed in the press. Objection has been taken to clause 19 sub-clause (3) which leaves the date open when "the gross value of any hereditament, as appearing in the valuation list, shall be taken to be conclusive evidence of the annual value of that hereditament for the purpose of income tax," and the Minister of Health gave an assurance that as the Government intended to have one valuation for all purposes a date should definitely be fixed on the Report Stage. Clause 1 sub-clause (1) as passed reads: "The Council of every county borough and the Council of every urban and rural district shall be the rating authority for the borough, or for the county district, and from and after the appointed day (1 April, 1926) no authority or person other than the council shall have power to make, or levy, any rate within the borough or district." This sub-clause is as it stood in the draft Bill circulated last year. An amendment to retain the overseers as an independent body was rejected, but in these days of municipal extravagance there does appear some objection if the law is to be altered in making the spending authorities the sole rating authorities. Sub-clause (2) provides that: "As from the appointed day all powers and duties of the overseers of the poor in relation to the making, levying, and collection of rates and of any other person who by virtue of any local Act has powers in that behalf (these latter words were not in the "draft Bill") shall in every rating area be exercised and performed by the rating authority." The following sub-clause (3) did not appear in the "Draft Bill": "Every rating authority shall for the purposes of this Act have the same power with respect to the appointment and authorisation of Committees as they have for the purposes of the Acts relating to Public Health." There are 78 clauses in the Bill and nine Schedules, so the Bill is hardly likely to become law in a hurry.

Bath Buildings.

Bath Corporation has succeeded in getting a clause inserted in their new Bill giving them powers in respect of the elevation of buildings so as to preserve the amenities of the city. The argument which decided the Local Legislation Committee to pass the clause was that the welfare of Bath depended upon its baths and its beauty, and it was possible that someone not caring for questions of beauty might wish to erect a big brick warehouse, which would do irreparable damage to the inhabitants, whether owners of property or otherwise.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

(For rates of wages in the Building Trade in Scotland, see page 27)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the name of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

JULY 6.—Arbroath.—HOUSES.—Two houses at H.M. Coastguard Station, for H.M.O.W. Architect, H.M. Office of Works, 122, George-street, Edinburgh. Deposit £1 ls.

WILLIAM WOODSEND, LTD. (205,767). Registered May 6. Newcastle Wharf, Castle Boulevard, Nottingham. Builders and contractors. Nominal capital, £15,000.

EASTWOOD'S CEMENT, LTD. (205,752). Registered May 6. 47, Belvedere-road, Lambeth. Manufacturers of and dealers in cement, lime, &c. Nominal capital, £150,000.

E. B. JONES & RAWLINSON, LTD. (206,251). Registered May 27. Builders, &c. Nominal capital, £10,000.

M. T. GREY & Co., LTD. (206,301). Registered May 28. Builders' merchants. Nominal capital, £5,000.

BALL, SONS & SQUIRES, LTD. (206,296). Registered May 28. General builders and contractors, &c. Nominal capital, £2,000.

C. I. WARD & Co., LTD. (206,266). Registered May 28. 2, Mortimer-place, N.W.6. Builders and contractors, &c. Nominal capital, £100.

GILBERT HODGSON & SONS, LTD. (206,319). Registered May 29. Contractors, engineers, &c. Nominal capital, £4,000.

FREDERICK SINGLETON & SONS, LTD. (206,318). Registered May 29. Builders and contractors. Nominal capital, £1,000.

F. G. MINTER, LTD. (206,370). Registered June 2. Ferry Works, Putney, S.W. Builders, contractors, engineers, &c. Nominal capital, £100,000.

PATCHING & SON, LTD. (206,202). Registered May 25. 44, Portland-street, Brighton. Builders and contractors. Nominal capital, £5,000.

ALBERT ARCHER & Co., LTD. (206,160). Registered May 23. Painters and decorators, &c. Nominal capital, £4,000.

A. GELDARD & Co., LTD. (206,106). Registered May 21. Builders, contractors and builders' merchant. Nominal capital, £1,500.

BUILDING RESTORATIONS (LEEDS), LTD. (206,079). Registered May 20. Builders and general contractors. Nominal capital, £1,500.

EPHRAIM BALMFORTH & SONS, LTD. (206,084). Registered May 20. Joiners, builders and contractors, &c. Nominal capital, £5,000.

TULKETH BUILDING Co., LTD. (206,099). Registered May 20. 22, Water-lane, Preston. Builders, contractors, &c. Nominal capital, £1,000.

J. SHARPLES & SONS (BLACKBURN), LTD. (206,547). Registered June 10. Shaw-street, Blackburn. Joiners, builders, contractors, &c. Nominal capital, £3,000.

EVANS BROS. (CONCRETE), LTD. (206,541). Registered June 10. Greenhill-lane, Riddings, Alfreton, Derbyshire. Makers and erectors of concrete buildings, &c. Nominal capital, £7,000.

JOHN J. CUNBY, LTD. (206,517). Registered June 8. Builders' merchants and cement and general contractors. Nominal capital, £3,000.

HASKARD, MCGREGOR & Co., LTD. (206,657). Registered June 16. 45, Braunstone Gate, Leicester. Builders and contractors. Nominal capital, £10,000.

E. HAMPTON & SONS (HANLEY), LTD. (206,656). Registered June 16. Eastwood and Mousecroft Fire Brick and Marl Works, Hanley, Stoke-on-Trent. Brick manufacturers. Nominal capital, £10,000.

WILLIAM BAILEY & SONS (BUILDERS), LTD. (206,630). Registered June 13. 40, Pelton-road, S.E.10. Builders, decorators, &c. Nominal capital, £2,000.

FORMAN & BURLS, LTD. (206,576). Registered June 11. 36, Mill-lane, West Hampstead, N.W.6. Builders, contractors, &c. Nominal capital, £500.

F. HAYES, LTD. (206,599). Registered June 12. Contractors, builders, engineers, &c. Nominal capital, £100.

OXFORD CONSTRUCTION Co., LTD. (206,603). Registered June 12. 82, Victoria-street, Westminster, S.W.1. Builders, and contractors, &c. Nominal capital, £2,600.

HOUSING ACT, 1925

The Ministry of Health has issued a circular drawing attention to the Housing Act, 1925, which came into operation on July 1, 1925, and which reproduces in a consolidated form the permanent law relating to the housing of the working classes in England and Wales. The temporary measures which have been passed for the purpose of encouraging building in the immediate future to meet the present shortage of housing accommodation are not incorporated in the Act. The Minister proposes at a very early date to issue under the new Act consolidated regulations and an order prescribing forms, both of which will come into operation on September 1.

MODEL FORMS OF CONTRACT.

In this circular, under the above heading, it is pointed out that, in general, bills of quantities are not required in connection with contracts which provide for the repetition of simple types of building, such as working-class cottages. In view of the experience which has been gained in work of this character, variations from the plan should, in general, only occur in connection with foundations, and the adjustment of the contract price required in consequence of such variations can be readily effected by means of a short schedule of prices. A form of contract containing such a schedule (Hsg. 63) has accordingly been drawn up and placed on sale.

An alternative form of contract (Hsg. 64) has been drawn up for use in special cases where bills of quantities have been prepared. This form provides, however, that such bills of quantities shall not form part of the contract. The effect of this is that neither party can claim re-measurement of the work shown on the drawings or specified, but the priced bills of quantities become a schedule for determining the value of any variations. Copies of this form have also been placed on sale.

Provisions have been inserted regarding the employment by the contractor of apprentices in order to satisfy the requirements of the Minister as set out in Circular 520A issued to Local Authorities on February 3, 1925.

Changes have been made in the clauses relating to wages (Clause 13 of Form D. 88A) and to sub-contractors (Clauses 31 and 37 of Form D. 88A).

TRADE NEWS

Messrs. F. W. Young & Son, builders, 67A, Osnaburgh-street, N.W.1, have opened new offices at 67, Osnaburgh-street, and have also extended their existing works at 67A, Osnaburgh-street.

We have received from the National Radiator Co., Ltd., Hull, a copy of an abridged catalogue which they have brought out, in which they give particulars of their current types of ideal radiators and ideal boilers, with brief descriptive material; also information in regard to ideal towel rails and valves, unions, &c. They also send us a pamphlet descriptive of their new plate-rack for use with the Ideal Cookanheat.

Building Federation President.

Mr. John Hanson, a Burnley builder and contractor, was unanimously appointed President of the North-Western Federation of Building Trades at the annual meeting at Burnley. The Federation's area includes Lancashire, Westmorland, Cumberland, Cheshire, North Wales, and Shropshire. Mr. Hanson has for a number of years been President of the Burnley and District Building Employers' Association, which body he has represented on the North-Western Federation and also on the National Federation.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

AYLESBURY.—The governors of the Aylesbury Grammar School propose to erect a new laboratory, remodel the existing laboratory, and erect new cloak-rooms. Plans by Mr. F. Taylor, 50, Bourbon-street.

BARNESLEY.—Plans have been approved for the erection of a school chapel on Huddersfield-road for the Wesleyan Trustees. Architect, Mr. W. F. Turner, of Barnsley. The General Chapels' Committee of the Wesleyan authorities are to make a grant of £1,000 towards the erection of a new chapel at Cortonwood and the South Yorkshire Coalfields. Commission will grant a further £1,000. The site near the housing estate has been given by the Cortonwood Colliery Co., and it is hoped to erect the building at an early date. The plans are to be prepared by Messrs. A. Brocklehurst & Co., architects and surveyors, 10, Norfolk-street, Manchester. The proposed technical college and institute is shortly to be commenced, the estimated total cost of which is £15,000.

BATLEY.—The E.C. accepted tenders for a new elementary school at Healey. The cost will be about £14,000. A sub-committee was also appointed to consider and report upon a suitable site for another new school and for playing fields.

BEXHILL.—The M.H. held an inquiry into two applications for loans involving £6,300, and affecting the roofing of the Colonnade and the acquiring of 36, Station-road, for extension of the municipal buildings.

BISPHAM.—A start is being made with the erection of the new convalescent home for miners of the Lancashire and Cheshire Miners' Federation. The estimated cost of the building and land is £115,000, the site being 7½ acres in extent.

BOGNOR.—The U.D.C. recommend that application be made to the M.H. for sanction to borrow £21,000 for housing.

BOLTON.—The Borough Engineer has prepared plans for offices and sheds at the Warwick-street store yard, and been authorised to invite tenders for the work.—The Corporation are to subsidise a further 250 houses.

BOURNEMOUTH.—The M.H. has sanctioned a loan of £3,000 for the development of Overstrand.—Preliminary sketch plans are to be prepared for baths to be erected on the Northwood estate.—Plans for the lay-out of the Charnier-street site are to be revised, in order to provide for a larger number of flats than originally suggested.—Russell Cotes-road is now suggested as the most suitable site for the war memorial.—The E.C. are considering as to the site for the new elementary school.

BURNLEY.—The sub-committee of the E.C. have been recommended to consider the acquisition of a plot of land at Lockye-avenue of 4½ acres as a site for a new central school.

BURSLEM.—A scheme is being proposed for the erection of a new hospital at Burslem, to replace the Haywood Hospital.

CARDIFF.—The "Angel" Hotel is to be remodelled at a cost of £50,000. The architect is Mr. Lennox Robertson, 27, Windsor-place.

CHADDERTON.—The Council instructed the Surveyor to proceed with the preparation of a scheme for the erection of 50 houses on a portion of Burnley-lane housing site.

CHESTER.—The T.C. resolved that applications be made to the M.H. for sanction to a further loan of £3,750 for the erection under the scheme by private enterprise of an additional 50 houses.—The Council resolved that they are in favour of the provision of an institution for mental defectives in combination with the Cheshire C.C. and the County Boroughs of Birkenhead and Wallasey.—The Council are to purchase, subject to the approval of the B.E., a piece of land at the corner of Cherry-grove-road and Chapel-lane for extensions to Cherry Grove-road school.

CHORLEY.—The Corporation have asked Mr. P. Howard, architect, to prepare a revised scheme for the proposed public baths, to meet requirements of the M.H.—A further 50 houses are to be subsidised.—Approval has been given to the lay-out plan prepared by the surveyor, showing development of the site at Pilling-lane, for the erection of 76 houses.—A site in Frederick-street is proposed as a housing estate.—The Rev. Canon R. Crank is in negotiation with the B.E. regarding the provision of a central school for Roman Catholic children, the improvement of St. Mary's schools, and the extension of St. Joseph's school.—Plans passed: Sixteen houses, Pilling-lane, for J. Fairclough & Sons.—The R.C. have appointed a sub-committee to inquire into the housing needs of Heskin, Eccleston, and Coppull, and to report suitable sites.

CHOPWELL.—Plans for a new Primitive Methodist Church, to accommodate 400 persons, have been designed by Mr. J. J. Eltringham, architect, of Black-hill. The estimated cost is about £5,600.

CLITHEROE.—The T.C. have purchased "Lowfield," for £2,350. It is intended to build on the site premises for the new motor fire engine and motor ambulance, and also provide garaging accommodation for the Corporation departments generally.—Plans have been approved by the R.D.C. for the erection by Lancashire Industrial Motors, Ltd. (Pendle Bus Co.), of a combined garage, waiting room, and assembly hall in King-street, Whalley.

CHRISTCHURCH.—The T.C. has decided on another housing scheme. Application is to be made to the

Public Works Loan Commissioners for a further loan of £1,500 for housing. Plans approved: New schools for the C.C. in Clarendon-road.

COALVILLE.—The U.D.C. are to make a new street leading from Belvoir-road to Forest-road, and any additional houses will be built in this street. It is probable that the Municipal Buildings will be erected on the site, and the public baths also.

COULSDON.—The U.D.C. has under consideration the provision of a swimming bath, and the surveyor is to report as to likely sites.—A lay-out plan submitted by Messrs. R. Costain & Sons, for 208 houses and 12 shops on the Selsdon Garden Village estate, is to be considered.

—The Coulsdon Heights estate is about to be developed by the Estate Company.—The surveyor is to prepare schemes for improvements at Smitham Bottom-lane and Chipstead Valley-road for submission to the M.T.—A scheme is to be prepared for widening the Higher Drive railway bridge.

DONCASTER.—Plans have been prepared by Messrs. Pite, Son & Fairweather, architects, of London, in association with Dr. Mackintosh, of Glasgow, of the new infirmary. The estimated total cost of the first scheme is about £200,000; and the site is on the Thorne-road.

EASINGTON.—Plans passed by the R.D.C.: 252 houses at Easington Colliery, for the Easington Coal Co., Ltd.; 86 houses at Horden, for H. Ball; 12 aged mine workers' homes at Deaf Hill, for the Aged Mine Workers' Homes Organisation; hotel on Coast-road, Horden, for J. Nimmo & Sons, Ltd., Castle Eden; church hall at Thornley, for Parochial Church Council.

EAST HAM.—The B.C. has instructed the Borough Engineer to renovate part of the corridor of the Town Hall, at an estimated cost of £153.—The Council recommend that £7,000 for the alterations and additions to the Refuse destructor works be applied for to the M.H.—Plans passed: Spiritualist Temple, adjoining 109-119, Third-avenue, Ilford, for the Ilford Spiritualist Society, and 20 houses, Hertford-road, for H. C. Seymour.

ENFIELD.—Middlesex C.C. has prepared a scheme for widening the junction of London-road and Southbury-road, at a cost of £38,285.

EXETER.—The T.C. approved the lay-out plan of the proposed new houses on the Buddle-lane Estate, providing for the erection of 54 houses.

GLASGOW.—Amended plans have been prepared for the provision of new wards at Knightswood Hospital.—The Housing Committee has agreed to investigate the proposal of the purchase of the Hundred Acre Hill, with a view to erecting tenements for slum clearance schemes.

GOLCAR.—The U.D.C. are making application to the M.H. for sanction to borrow £18,000 for the purpose of erecting 34 houses on the Bull Close site.

GREAT HARWOOD.—The surveyor to the R.D.C. has been instructed to prepare plans and specification for the proposed erection of a number of houses near Waverledge Mill.

HARROW.—Local authorities, the Middlesex C.C. and the M.T. have agreed on a scheme for the construction of an arterial road from Harrow to Watford. The length will be seven miles, and the cost is estimated at £265,000.

HASTINGS.—The business premises in Castle Hill-road, owned by Mr. W. Crowhurst, are to be rebuilt. Plans have been prepared by Mr. W. H. Coussens, 35, Havelock-road.

HAYES.—It is proposed to create a new parish of St. Anselm's, and build a permanent church.

HERDEN BRIDGE.—The M.H. has sanctioned the borrowing of £7,084 for the purpose of erecting 12 houses at Eaves Bottom.

HEMEL HEMPSTEAD.—The R.D.C. propose to erect 100 houses in the next two years.

HIGH WOOD.—The M.H. has forwarded observations on the proposals for providing a mortuary and post-mortem examination room at High Wood Hospital for Children.

HILLINGDON.—Middlesex E.C. has arranged terms for the purchase of a site for the erection of a secondary school.

JARROW.—The T.C. recommend that application be made to borrow £1,360, the estimated expenditure for converting the Council's premises at the corner of Grange-road and Water-street into a school medical and dental clinic and maternity and child welfare centre.—Application is to be made for sanction to borrow £20,585 for the erection of 46 houses by direct labour.

KILKEEL.—The Down C.C. are to spend £1,355 to aid the stability and usefulness of Kilkeel Harbour.

LEICESTER.—The T.C. has approved the erection of 291 houses in various places.

LINCOLN.—A new public-house is to be built on a site in St. Giles, for Messrs. James Hole & Co., Ltd., brewers, Castle Brewery, Newark-on-Trent. Plans have been prepared by Messrs. Sheppard & Lockton, 24, Castlegate, Newark-on-Trent.

LONDON.—The M.H. has approved the expenditure, by the M.A.B., of £33,790, for the erection of a boiler house, engine room, coal store and chimney, and for the execution of engineering works in connection with the re-arrangement of the heating and hot water supplies at Levensden Mental Hospital.

LONDON.—The M.A.B. recommend that the installation of electric light at the Southern (Lower) Hospital at an estimated cost of £3,500 be approved, and also

the provision at an estimated cost of £407 of further additional patients' accommodation at St. Luke's Hospital in accordance with the plan submitted, subject to the sanction of the M.H.

LONDON (BATTERSEA).—The B.C. recommend that, subject to the Unemployment Grants Committee approving the proposed scheme of work, sewers be re-constructed at an estimated cost of £36,196 3s. 7d., and that application be made to the L.C.C. for their approval.

LONDON (CAMBERWELL).—The B.C. recommend that a supplemental estimate for the sum of £780 for the structural repair of Brown's-terrace, Avenue-road, be approved.

LONDON (COLINDALE).—The M.A.B. recommend that the provision, at a total estimated cost of £176, of equipment for the laboratories at King George V Sanatorium, Colindale Hospital, Pinewood, and Princess Mary's Hospital be approved.

LONDON (DEPTFORD).—The B.C. has received approval from the M.H. for loans for the expenditure for the whole site and for the erection of the first portion of the North Ward Baths' scheme.

LONDON (FOREST HILL).—The Lewisham B.C. recommend that plans and estimates be approved, and that the necessary steps be taken for the erection of the convenience at an estimated cost of £1,600.

LONDON (FULHAM).—The B.C. recommend that application be made to the L.C.C. for sanction to the borrowing of £23,114, for the proposed housing scheme in Wyfold-road.

LONDON (HACKNEY).—The B.C. are proposing to purchase a site at Stamford-hill, for the erection of a substation.—The Council recommend that land be purchased at Southwold-road and Mount Pleasant-hill, for which the Surveyor has submitted a scheme for the erection of flats.—Plans passed: D. Morris & Sons, Ltd., eighteen shops and flats, 160-173, Clapton-Common, and 222-236, Stamford-hill; W. Shurmer & Sons, factory premises at Amherst Works, in the rear of the dwelling houses, Northwold-road.

LONDON (LEWISHAM).—The B.C. passed plans: J. G. Stephenson (for L.C.C.), 191 houses on the Downham estate; George Watt, 10 houses, Casslee-road; H. R. Watt, 21 houses, Bellingham-road; Chas. Ingram & Co., nine houses, Como-road; W. T. Champion & Son, 26 houses, Tatnell-street; A. J. Glock, 36 houses, Brightling-road; Thos. H. Sawyer & Son, 11 houses, Embleton-road; Chas. Ingram & Co., 10 houses, Kilgour-street; A. J. Glock, 26 houses, Bexhill-road; R. J. Aitchison, 13 houses, Tatnell-street.

LONDON (POPULAR).—The B.C. are to construct a convenience at Island Gardens, at a cost of £1,500.—Messrs. J. Calder & Co., Ltd., have a scheme for embanking the recess and filling in the draw dock at Johnson-street, Cubitt Town, by the North Greenwich railway station. An estimate of £48,000 for buildings and plant in connection with the development of the electricity undertaking has been prepared for submission to the Electricity Commissioners.

LONDON (ST. PANCRAS).—The B.C. has instructed the architect to prepare plans for the Somers Town housing scheme.—Plans passed: Buildings, 53-79, Highgate-road.

LONDON (STEPNEY).—The B.C. has decided to carry out a small housing scheme at Brook-street, Ratcliffe, at an estimated cost of £3,152. Application is to be made to the L.C.C. for sanction to a loan of £3,467 for the purpose. The Council recommend that instructions be given to the Housing Committee to prepare an improvement scheme for the re-arrangement and reconstruction of the streets and houses within the area at Limehouse Fields. This scheme is estimated to cost £377,500.

LONDON (WOOLWICH).—The Borough Engineer is to submit a plan showing a suggested lay-out of land at the junction of Footscray and Southwood-road, Eltham, for the erection of baths, hall and branch library.—The Council recommend that the Borough Engineer carry out repairs at the Plumstead Baths, at an estimated cost of £338.—The B.C. recommend that the Borough Engineer also carry out repairs, &c., at Woolwich Cemetery, at an estimated cost of £451, and at Plumstead Cemetery, at an estimated cost of £145.—Plans passed: W. Childs, 10 bungalows, Avery Hill-road, Eltham; J. T. Wyatt, 14 houses, Dobell-road, Eltham.

LONDON (STAFFS).—Mr. A. E. Jones has prepared a scheme for the erection of 150 houses at Lightwood, London.

MANCHESTER.—The Public Health Committee has received provisional sanction from the M.H. to its scheme for extending the Abergree Sanatorium for consumptives. It is proposed to increase the accommodation to 540 beds, and the total cost of the scheme will be about £300,000.

MARTLEY.—The U.D.C. has approved plans for 162 houses.

MARLBOROUGH.—Tentative proposals have been made for the utilisation of the site now used for the disinfecting station, for the erection of a block of flats to accommodate people displaced by slum clearances.—In connection with the decision to add an extra story to the new blocks of tenements on the Fisherton site, Messrs. Ashley & Newman, the architects, report that this will involve an additional expenditure of £7,800, and provide additional accommodation for eighteen families.—The Borough Council have appointed a committee to report on the possibility of constructing an open-air swimming bath in Regent's Park.—The Central London Railway Co. propose to erect residential flats in Maida Vale.

MIRFIELD.—The E.C. has decided to carry out improvements at Hopton Council School at an estimated cost of £249.

NEAR BELLINGHAM.—The Hatcliffe Almshouses at Catford are to be rebuilt near Bellingham.

NELSON.—The T.C. recommended that application be made to the M.H. for sanction to borrow £30,000 for the erection of public abattoirs.—The General Purposes Committee recommended that application be made to the M.H. for sanction to erect 200 additional houses on the Marsden Hall Estate.

* See also our List of Contracts, Competitions, etc.

NORTHFLEET.—The U.D.C. has decided to proceed with a scheme for the erection of 76 houses on the Northfleet House estate.

NORWICH.—The T.C. proposed that 150 houses should be built of brick and 100 of concrete, and that 200 should be of the non-parlour type and 50 parlour houses. The Ministry has approved of the plans for these houses. Application for sanction to a loan of £14,290 for sewerage and sewage disposal works is to be made to the M.H.

NUNEATON.—The T.C. decided to apply to the M.H. for sanction to erect a further 200 houses on the Stockingford and Tomkinson-road housing sites.

OLDHAM.—The Midland Bank, Ltd., of Thredneedle-street, E.C.2, are to build a new branch bank on a site fronting Middleton-road and Rochdale-road, Royton. The architects are Messrs. Taylor & Simister, 29, Queen-street, Oldham.

PLYMOUTH.—The C.B. has instructed the surveyor to prepare plans and estimates for an unhealthy area improvement scheme, which includes High-street and Peel-street, Stonehouse, Castle-street and New-street, and Batter-street. The Borough Surveyor submitted plan and estimate of £2,800 for the provision of a bowling green pavilion and refreshment room accommodation on the Hoe on a site near the bowling green and adjacent to the drinking fountain, and the Council resolved that the plan be approved, and application be made to the M.H. for sanction to borrow the sum of £2,800 for the work. The Borough Surveyor is to obtain tenders for the erection of the building.

PONTEFRAC.—The R.D.C. have approved of plans for the erection of 10 houses each in Pontefract-road, Ferrybridge; Carleton-road, Carleton; Joffre-avenue, Glasshoughton; Pontefract-road, Glasshoughton, and Coronation-street, Glasshoughton. The R.D.C. has approved plans for the lay-out of 38 houses on the 2 site at Airedale.

PORTSMOUTH.—The public house in Castle-road, known as the "Barley Mow," and owned by Messrs. Brickwood & Co., Ltd., The Portsmouth Brewery, Admiralty-road, is to be rebuilt. Mr. A. E. Cogswell, architect, Prudential Buildings.

PRESTON.—The T.C. passed plans: J. Miller (Ashton Building Co.), 12 houses, The Crescent; J. W. Grange, six houses, Lytham-road, and eight houses, Grange-road. The Housing Committee of the Corporation has decided to erect a new electricity transformer station at the corner of Hawthorn-road and Elm-grove. A plan for the erection of a proposed handstand in Moor Park has been approved.

PURLEY.—Inquiries are being made by the Surrey E.C. for sites in Purley for the erection of a secondary school, a technical school, and a central school.

RYDE.—A scheme for the provision of additional shelters on the Esplanade is under consideration by the T.C.

SARRETT.—The P.C. selected plans for 16 non-parlour type houses.

SHREWSBURY.—The Corporation propose to retain possession of the surplus land on the Coton Hill estate, in view of the possibility of providing sites for subsidy houses, of widening Berwick-road and lowering the wall south of Berwick-road, and thereby opening out the beautiful view of the town over the Terrace gardens.

SIEMOUTH.—The M.H. has sanctioned a loan of £16,000 for sea defence works to be undertaken by the U.D.C. Plans have now been prepared for the lay-out of the Arcot estate, and tenders for houses are to be obtained. A hospital is to be erected by the Victoria Cottage Hospital Committee.

SLEAFORD.—The Kesteven C.C. are to purchase certain premises known as Lafford-terrace, to provide County Offices.

SOLIHULL.—The R.D.C. decided to erect another 24 non-parlour type of houses.

STAINES.—The R.D.C. approved the housing and town-planning scheme submitted by the surveyor.

STANLEY (YORKS).—Plans passed: Fourteen houses at Newton Hill, for Messrs. F. & M. Silverwood. Application for sanction to borrow £22,000 is being made to the M.H. for the erection of 38 houses.

STOKE-ON-TRENT.—The Sutton Trustees are purchasing land at Stoke Lodge for a housing scheme. In connection with the Scotia-road Bridge improvement, the City Engineer has arranged with the railway company's engineers to first advertise for tenders for the steel joints. The Corporation has agreed to the lay-out plan of land in Weston-road, Mear, submitted by Mr. Sherwin, architect, for Mr. W. B. Sutton. Messrs. Myett & Co. propose the erection of a bridge across the passage at Arthur-street, Cobridge. The M.H. held an inquiry into the proposed compulsory acquisition by the Corporation of land at Abbey Hulton for the purpose of a housing scheme. The T.C. has decided to erect 700 additional houses, 400 at Abbey Hulton and 300 at Meir, Longton.

SWANSEA.—The C.B. resolved that application be made to the M.H. for sanction to the borrowing of £10,000 for housing purposes. The Borough Architect submitted a lay-out plan, which the Council approved, of the surface land to be purchased, which included the following types of houses to be erected thereon: 12 parlour type and 68 non-parlour type houses. The C.B. are to carry out an electric main scheme at an estimated cost of £33,137, for which application is to be made to borrow that amount. Unemployed relief schemes are to be carried out at a cost of £200,000. The Council has authorised the Estate Agent to negotiate for the purchase of land in the vicinity of Cadle School for the enlarging of the school. The Borough Estate Agent submitted a plan showing the lay-out of land at Town Hill, west of May Hill, which the Housing Committee wish to appropriate sufficient for the erection of 250 houses, which the C.B. agreed to. The Borough Engineer and Surveyor reported that the Highways Committee were carrying out an improvement at the junction of Carmarthen-road and Gorse-road, involving the removal of the existing public urinal, which would be replaced by a new urinal on the site now indicated; this the Council approved. The Council approved the scheme of the

Medical Officer of Health to seek approval to an orthopaedic scheme involving a clinic at Dynevor-place. Application is to be made to the M.H. for approval to this scheme. Mr. Evans Rees proposes to build a factory and stores. A reinforced concrete building has been designed by A. P. Lloyd, A.R.I.B.A. 71, Lincoln's Inn Fields, W.C.2.

TADCASTER.—Plans passed by R.D.C.: Ten houses at Allerton Common, for Miss G. Ward.

TOTTENHAM.—The D.C. has approved plans for 85 houses to be erected by various firms, including 30 in St. Ann's, Cissbury and Lydford-roads, for Mr. Thos. Rowley. Plans were also approved for a factory for Messrs. Moore, West Green-road; and warehouse extension at Down-lane for Messrs. G. J. Lines.

TROWBRIDGE.—Formal sanction has been received from the M.H. to the borrowing of £8,000 in connection with the Charlotte-street housing scheme.

UPPINGHAM.—The R.D.C. has instructed the surveyor to prepare plans for the conversion of the hospital on the Leicester-road into 14 cottages. Mr. G. E. Dolph is the surveyor.

WAKEFIELD.—The West Riding E.C. are to give notice of authority to erect a new Middle School at Featherstone with accommodation for upwards of 300 children. The Higher Education Committee propose to acquire two farms at Askham Bryan for experimental farm work, and to carry out improvements there, at a total estimated cost of £36,000. Plans are to be prepared for the erection of a modern out-patients' building at the Clayton Hospital.

WALSALL.—The T.C. has decided to erect a new medical clinic and handicraft centre in Littleton-street, at a cost of £2,250.

WALTON-ON-TRE-NAZE.—A new hotel, to be known as the Naze Links Hotel, is to be built at a cost of about £40,000. Plans have been prepared by Mr. F. Durant, "Maisonnette," Walton-on-the-Naze.

WEMBLEY.—A site in East-lane is being acquired by the Middlesex E.C. for the erection of an elementary school.

WESTHAMPTON.—The R.D.C. are to erect 12 houses at Singleton and six at East Dean, for which tenders are being invited.

WHITLEY AND MONKESEATON.—The U.D.C. are proposing to erect a bathing pool.

WILLESDEN.—The U.D.C. recommend the Borough Engineer to carry out the necessary internal decorations to the lodges in Roundwood Park and Willesden Cemetery. The Borough Engineer is to obtain tenders for the exterior painting of 259 houses. Application is to be made to the M.H. for sanction to the raising of a loan of £20,000 for housing purposes. Tenders are to be obtained for the erection of houses on the Brentfield estate. Plans passed: Electricity transformer house, Neasden-lane, Neasden, by S. A. S. Yeo, for the Royal Sovereign Pencil Co.; Boy Scouts' hall, St. Gabriel's Church Hall, Chichele-road, Cricklewood, by J. Hudson, for the Trustees of the Church Hall; factory, Milton-avenue, Harlesden, by J. Lawrence, for Blunt & Sons.

WORCESTER.—The Worcester C.C. are to erect 24 police cottages in various parts of the county.

FIRES.

LEYTONSTONE.—A serious fire occurred in the build ings of the West Ham B.G. Central Home.

Technical College, Wolverhampton.

The Technical College Joint Sub-Committee of the Wolverhampton Education Committee have recommended that the provision of the complete Technical College, costing altogether about £150,000, be proceeded with as soon as possible.

Factory Fire.

What might have been a disastrous fire broke out recently at Messrs. Rippers, Ltd., Castle Hedingham Works. The factory is operated by five gas engines, developing a total of over 1,000 h.p. on the suction gas principle, the waste, sawdust and shavings from all departments being used for fuel. A Sturtevant exhausting plant collects this waste in a central storage chamber situated over the power house, above which a wooden staging supports two cyclone settling chambers. Fortunately, the whole power plant is housed in one brick and ferro-concrete building, isolated from any other department, and it was thus possible to confine the outbreak to the one building, as otherwise owing to the exceptionally dry weather which has prevailed, the whole factory would have been gutted in a very short time. Amongst other preventive measures against fire, recently installed, are two tanks—one of 100,000 gallons capacity, situated near the joiners' shop, and the other of 40,000 gallons, underground under the timber mill—so that an ample supply of water was at hand. Within five hours of the first alarm the fire was well in hand; and immediate plans were put into operation for resuming work. The damage sustained has been considerable, but arrangements have been made to ensure that all orders in hand are being pushed forward with a minimum of delay. The firm's Standard Joinery Service is unaffected.

PATENTS.

APPLICATIONS PUBLISHED.*

232,814.—J. M. Moreland: Devices for closing doors and for holding them in an adjusted position.

232,818.—S. S. G. Dicker (M. Hutchinson): Wood-working machines.

232,584.—A. Kirkaldy: Anodes for preventing corrosion of metallic surfaces.

232,898.—L. G. Patrouilleau and Alumine et Derives: Process for the manufacture of aluminous cements.

233,001.—E. B. Hack and E. J. Burt: Manufacture of concrete.

233,033.—W. Simkin and E. Evans: Brick, pipe, and like kilns.

233,087.—K. D. Mackenzie and J. P. MacKinnon: Floors.

233,105.—B. C. Barton: Reinforced concrete walls.

232,155.—Soc. Anon. des Ciments Francais, and Bureau d'Organisation Economique: Manufacture of cement.

233,158.—G. Ollert: Balancing of stresses set up in lattice-work structures.

233,174.—A. O. Sarson and V. F. Lardner: Glazing-bars.

233,230.—H. Freeman and F. P. Bloomfield: Floors, roofs, and ceilings, and hollow reinforced concrete girders therefor.

232,232.—T. Franks: Casement stays.

255,521.—Naamlooze Vennootschap Machinerieen-en Apparaten Fabrieken: Pressure frames for vertically-guided sliding windows.

266,528.—International Copperclad Co.: Method of and apparatus for producing roofing elements.

233,764.—E. C. R. Marks (Polysius, G.): Process for burning raw cement sludge.

233,778.—H. D. P. Huizer: Preservation and treatment of wood.

233,795.—F. F. Mote: Mould-board apparatus for the erection of concrete structures.

233,796.—F. F. Mote: Mould-board apparatus for the erection of concrete structures.

233,807.—H. J. V. Berthelsen, A. L. Hansen, and J. Jensen: Machines for joinery work.

233,819.—A. Brune: Manufacture of plates, tiles, and the like articles, from lime and cement.

233,870.—J. W. E. Laker: Machines for grinding and mixing paints and other substances.

233,912.—A. E. Farwell: Scaffolding.

233,913.—H. Dyke: Doors.

233,920.—L. A. Dexter: Lath construction.

233,928.—A. Heidet: Scaffolding and staging platforms.

233,772.—A. G. Rotinoff: Piles and pile-driving.

233,386.—G. K. Green: System or means for building-up concrete and like monolithic structures in situ.

233,393.—W. McCaughan: Walls for buildings.

233,450.—V. E. Heathcote-Hacker: Attachments for fireplaces.

233,453.—W. J. Brise: Method and apparatus for facilitating the laying of bricks.

233,455.—P. Davies: Plain and reinforced-concrete structures.

233,475.—F. T. Walker: Chimneys.

233,488.—English Electric Co., Ltd., and P. W. Seewer: Pipe connections.

233,531.—Dr. K. Ritter and E. Hartel: Flooring-tiles.

233,548.—A. A. Thornton (National Brass Co.): Sliding latches.

233,560.—L. A. Pitcher: building-blocks.

233,623.—J. Boswell: Construction of concrete structures.

233,626.—A. R. Wells: Interlocking, self-jointing, non-slipping paving-blocks.

226,837.—J. M. Blasco: Drums applicable to concrete or mortar mixers.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

STATUTORY MEASUREMENTS OF DISTANCE

A CURIOUS point was raised and decided in the case United Counties Omnibus and Road Transport Company v. Mayor, etc., of Northampton (*The Times*, June 30).

By the Northampton Corporation Act, 1922, the Corporation had powers to provide, maintain, and run omnibuses within the borough, but in the interests of a private company which was maintaining an omnibus service both within and outside the borough at the time the Bill was before Parliament, a clause had been inserted (section 33 in the Act), that the Corporation should not provide, maintain or run any omnibus service "beyond a distance of two and a quarter miles from the town hall upon any route on which the limited company are running omnibus services at the passing of this Act."

The question before the Court was how this measurement of distance was to be applied, the company contending that the distance was to be measured along the route traversed, where as the Corporation contended that the distance must be measured according to the "Measurements of Distances" prescribed by the Interpretation Act, 1889: "In the measurement of any distance for the purposes of any Act passed after the commencement of this Act that distance shall, unless the contrary intention appears, be measured in a straight line on a horizontal plane." The Court held that as no contrary intention appeared in the private Act the Interpretation Act applied, and therefore the distance was to be measured as above, or, as the Court put it, "as the crow flies."

If the streets in question follow a circuitous route it appears an interesting mathematical problem will have to be worked out.

Obituary.

The death has occurred of Mr. William Ruckley, 1, Llanover-street, Cadoxton, Barry, of the firm of Messrs. W. Ruckley & Sons, builders.

The death has taken place of Mr. John Smith, builder, Llanelly, who for some years was a member of the Llanelly District Council.

WATERLOO BRIDGE

WHATEVER the outcome of the efforts which have been and are being made for the preservation of Waterloo Bridge, the citizens of London and all who take an enlightened view of their duty to help preserve the amenities of our cities, our towns and our countryside, will, we believe, feel grateful to those institutions and societies which have joined forces in order to preserve a national as well as a beautiful monument. If these public-spirited bodies have not so far succeeded in their effort—though they may have gone far in the attainment of their objective—to induce the London County Council to reconsider their decision to rebuild Waterloo Bridge, they have surely satisfied the general public that a good and unanswerable case has been made out for further consideration by an independent and qualified body. We cannot think that the Council, elected as it is to represent the public, will be indifferent to public opinion, which contends that in view of the wide difference of opinion between the L.C.C. engineers and other engineers equally eminent, the contemplated action of the Council should be delayed until an entirely impartial body has considered the facts and all the expert evidence. It must not be forgotten, as it appears to be in some quarters, that Waterloo Bridge is a great national monument, which was to be "a lasting record of a brilliant and decisive victory," and no irrevocable step ought to be taken unless and until it is established beyond all reasonable doubt that "the old bridge is worn out and has to be taken down to prevent it falling down."

That the bridge is worn out has been the contention of the L.C.C., but it is emphatically contradicted by the societies who are urging the preservation of the structure, and a conference of these societies* has now submitted to the Council a report urging the preservation of the bridge by underpinning, with the hope that the Council will now refer the whole matter to an independent body. A *precis* of this report will be found in this issue, but we may explain that it is the outcome of a deputation from the conference which waited last February on the Special Committee on Thames Bridges, and pleaded for a further inquiry before the demolition of the existing bridge was finally decided on. The committee replied that a start could not be made with the new bridge for some months, certainly not before July, and if in the meantime any evidence against the destruction of the bridge were produced it could be considered. The societies interested received every courtesy and consideration from the Council and their officials in their quest for information and, as a result of thorough examination by independent engineers, they now report that they are able to present an unanswerable case, showing that on technical, artistic, and traffic grounds the destruction of the bridge cannot be justified. With the exception of one, all the engineers who have gone into the matter since last February take the view that the bridge can be preserved by a system of underpinning.

In a general statement addressed to the clerk of the L.C.C., Mr. Arthur Keen, Chairman of the Conference, points out that a large number of engineers and architects after protracted inquiry endorse the opinion that the bridge can be preserved, but that there are very natural divergencies of opinion as to the best methods of dealing with one detail or another, but the unanimity on the broad question is noteworthy. The report in part conveys the considered views of the societies working for the preservation of the bridge, but the document includes the individual opinion of engineers of considerable experience in underpinning and similar problems. The views of Mr. H. H. Dalrymple-Hay, who has had a wide experience of

underpinning and of similar problems in connection with the London Tube Railways, are well known, and in our issue for April 3 we gave his illustrated report to the Society for the Protection of Ancient Buildings. We then asked whether any impartial person, in view of this report, could consider the L.C.C. justified in rebuilding the bridge without further consideration, and that question may be asked again with added insistence now that the Conference of Societies has reported, as in addition to the opinions of Mr. Dalrymple-Hay, we have the statement of Mr. C. F. Bengough, whose experience in underpinning the high-level bridge at Newcastle under similar conditions to those prevailing at Waterloo Bridge, give exceptional importance to his opinions, and who believes that "the foundations of Waterloo Bridge, with the possible exception of pier No. 4, can be maintained by underpinning," and that "the question of underpinning pier No. 4 is well worth considering." The opinion of Mr. G. E. W. Cruttwell (Sir John Wolfe Barry & Partners) in support of Mr. Dalrymple-Hay's proposals are also given in the report of the Conference of Societies as well as those of Dr. Oscar Faber, who is a well-known authority on problems of foundations subject to settlement and decay, who considers that underpinning is not only practical, but "presents no greater difficulties than many other large underpinning works which engineers deal with in the ordinary course of their professional work, and further, that the life of the bridge could by this means be increased for another hundred years or more, and that the cost of this work should amount to only about one quarter of the cost of demolition and rebuilding!"

The report is confined to the technical problems of preservation, and deals with the foundations, the causes of settlement, the quality of materials employed, while a scheme of repair is proposed, accompanied by estimates of cost and time. The estimates for underpinning and for consolidation appended show variations. "Each, however, points to an outlay far below the figure of £988,000 estimated by the London County Council for partial rebuilding of the bridge in its present form, while the saving, both in time and money, resulting from the preservation of the existing structure compared with the cost of widening the bridge, or erecting a wholly new structure, is, of course, far greater. The difference between the cost of underpinning and the cost of a new Waterloo Bridge would go far to meet the outlay on the new Lambeth Bridge."

Particular emphasis is laid by the conference on a letter from Sir Francis Fox, in which he states:—"I am of opinion that it is quite unnecessary to destroy Waterloo Bridge—and that by means of underpinning it can be saved with enormous economy—and that, were it possible to examine the timber platform and piles below water, no decay would be found. If the widening of the bridge be necessary, then, with care, no crack between the old and the new portion need be caused; the granite facade can be used again, thus preserving the present character of the structure with the century-old appearance of the existing stone."

These and other views show that there is a very respectable body of opinion that the bridge can be maintained, and as a new and wider Waterloo Bridge would not solve the traffic problem without great street improvements north and south of the river, there can be no doubt that the case submitted justifies the request that the Council, which has an honourable record of disinterested public service, should examine the whole problem again. In the circumstances, we cannot help thinking that the L.C.C. will now see that they may face the possibility of retaining the bridge and so earn the gratitude of their fellow citizens. When all is said and done, we know that the efforts made for and against the preservation of the bridge have been dictated by a desire to serve the best interests of the city of London, and that being so, we may surely face the final outcome of the discussion on one side and the other with hope and even confidence.

* The Royal Academy, the Royal Institute of British Architects, the Society for the Protection of Ancient Buildings, the London Society, the Town Planning Institute, the Architecture Club, a Conference of Engineers. Published by the Conference, 9, Conduit-street, W.1. Price 3s. 6d.

NOTES.

Anglo-American Friendship.

THE ceremony on Saturday morning last of unveiling the group of statuary which adorns the archway above the entrance to the Bush Building from Kingsway was the public recognition of a very acceptable token of friendship between the English-speaking people on both sides of the Atlantic. Earl Balfour spoke of this with a gracefulness and feeling which added much to the significance of the gift from Mr. Bush to the English people. The hands across the sea are graphically symbolised in this admirable piece of sculpture.

Bush House Sculpture.

THE special value of the sculpture at Bush House, however, lies in the great success which the sculptor, Miss Malvina Hoffmann, has achieved in the difficult problem which confronted her. Any figures which had risen axially above the columns would have been almost impossible to treat successfully in size or form, but by narrowing the group within the columns whilst preserving the duality of the figures Miss Hoffmann has agreeably filled the space of the arch with figures, which, whilst large and expressive, evade the difficulty of being too small for the great columns below. The columns and the entablature which they support have now become by this design of the sculptor's art an expressive and pleasing feature in the elevation.

We can recall few modern instances in which the sculptor has done so much to give significance and value to the architectural forms of a composition. The detailed value of the sculpture will be fully appreciated by those who have studied it with care. The tense English figure with its air of self-assurance and its emblems of tradition is contrasted with the looser-limbed and athletic American in an attitude of receptive friendship; as they clasp hands on the torch above the altar of friendship these figures clearly and expressively symbolise the friendship of the English-speaking peoples. An opportunity such as this is seldom given to a sculptor who by a refined and expressive work may convey so much of vital significance to the world. Other examples of Miss Hoffmann's sculpture, which we give in this issue, show what outstanding quality characterises her work, and we can only wish she may find a long employment for her great capacity.

Waterloo Bridge.

WE make some comments in our leading article on the report on Waterloo Bridge which the Conference of Societies has just issued, but we may quote here an observation made by Dr. Faber in his letter which is included in the report. "In view," he says, "of the London County Council's proposal to demolish the bridge, it is difficult to see what objection there could be to authorising the underpinning

of one pier so that the cost and the difficulties could be definitely ascertained. If the work should, for any reason, be a failure, little would appear to be lost, as the present intention appears to be to demolish it anyhow, and if the work were a success the saving of the bridge and of a large sum of money would have been effected." Surely a very sensible observation!

Sweden. THE appeal of Sweden to the modern architect is so insistent that sceptics were

bound to arise and ask first whether the new Mecca justified the pilgrimage on its own merits, and even so to question whether the influence was such that we should attempt to translate it at home. For this reason, the recent visit of the "A.A.," described this week, has aroused much interest, and the travellers' impressions will be eagerly received. Probably the first point that they would all emphasize is the "folk spirit" in the building art—such as Professor Lethaby has described as underlying the genius of Philip Webb. This amazing co-operation between designer, mason and craftsman is no sudden development; it marks a re-birth, rather than a reaction, and the old castles of Denmark and Sweden are ancestors to that organic beauty to which the Town Hall of Stockholm owes so much of its unique beauty—for which evidently no photo or model can adequately prepare us.

Swedish Classic.

THAT this vitality has not stopped at the Town Hall is clear from the enthusiasm shown by the new "classic" school, which is as vigorous in Sweden as in Denmark. Here unconscious art—a contentious term—is replaced by a strong directional aim, and while classical details in no way follow the renaissance formula, they reappear. This movement has acquired considerable flexibility and must be of great interest to all students of architectural thought. In this country it is unlikely that "unconscious" or directional expression will claim the whole stage; perhaps such academic differences recall too vividly that other Battle of the Styles, now mercifully defunct, and perhaps because a vigorous catholicism in our schools at home has made the word "style" a subject of suspicion in any form, and owing to its reactions, dangerous as a label. Scandinavia, in short, has made those who visited it keener and more active-minded, and, given the opportunity, it should be reflected, not necessarily in novel, but in better work here.

Manchester Art Gallery.

THE duties of assessorship in architectural competitions are not so light and irresponsible as they once were, and this is probably due to a higher standard of accomplishment amongst competitive designs and the

Town Hall and Quays, Stockholm. MR. RAGNAR OSTBERG, Architect.

View of Bush House, showing Miss Malvina Hoffmann's Sculpture Group in position.

more vigilant oversight of awards. We know something of the difficulties of making fair awards and have much confidence in the *bona fide* of assessors. But the architectural profession has a right to criticise carefully and continuously the results of competitions, and as it is the competitors who are as a rule the best judges of the difficulties of the problems set, their complaints deserve some consideration. In the Manchester Art Gallery competition we certainly think that the complaints made about the award should be definitely met, and this not mainly in the interests of that scheme itself, but as a guidance to the conduct of future competitions. It is unfortunate if a competitor who has the ability to grasp the essential difficulties and advantages in the design of a certain work better than those who have promoted and conducted a competition, is to have the value of his scheme discounted because of some conditions or instructions which would have been better omitted. In the particular competition much may depend on the strict definition of the word *basement*, but this is not the only objection raised.

It was a happy coincidence that the degree of "Master of Architecture" was bestowed on Friday

Messrs. Hastings and Corbett, our two distinguished American confreres, and Prof. Adshead on Saturday last, just when the success of the Liverpool School of Architecture has been once more signalled in the awards of the Grand Prix de Rome. The speech of Mr. Ramsay MacDonald on Saturday, which we give elsewhere, was a well-informed tribute to the value and importance of architectural art.

THE exhibition of the Architecture Club is to be held this year at the Galleries of the Royal Institute of British Architects, from October 26 to November 14. The exhibition

is divided into three sections. "A" is to represent recent architecture by large photographic prints or models. Class "B" is to show interior architectural decoration in colour. Class "C" is for architects' preliminary sketches for

buildings. The exhibition should be a good one, but ideality and imagination are to be held strictly in check. As regards executed buildings, the popularisation of architecture for the general public being limited to what they can appreciate from photographs, the cult of the photograph is a heavy one.

Work by
Elementary
School
Children.

So much has recently been said in criticism of present-day teaching methods in the elementary schools that the high standard of work received by the British Commercial Gas Association in the Essay Section of their tenth annual Fairy Gas Competition is worthy of note. Of the 180,000 forms distributed in connection with the competition not a few were returned from secondary schools, but it was a pleasant surprise to the judges, we understand, more especially to those of them who were accustomed to University and Public School teaching only, to find that the work of the elementary schools was as excellent as that of the secondary schools.

Paderewski Bronze.

By MISS MALVINA HOFFMANN.

GENERAL NEWS

Professional Announcements.

Messrs. Longden & Venables have acquired the practice of the late Mr. C. G. Cowlishaw, architect, of Hanley, and have taken over the offices at Stafford-street. This practice will be amalgamated with their own in Stoke-on-Trent and Leek. Messrs. Longden & Venables would be glad to receive copies of up-to-date catalogues for use in the office.

Michelangelo Statues Discovered.

Seven models of statues of the prophets made by Michelangelo for the Dome of St. Peter's, Rome, have been discovered beneath a heap of rags in a storehouse in the Vatican, where they had lain for centuries. The prophet Isaiah is Leonardo da Vinci, and other portraits are those of Vasari, Titian, and Michelangelo himself.

Mersey Tunnel Scheme.

The Select Committee of the House of Lords which, with Lord Wemyss as chairman, has had under consideration the proposal to construct a tunnel under the Mersey for general vehicular traffic, has now passed the scheme, which includes the building of a tunnel from Liverpool to Birkenhead, with a branch on the Liverpool side leading to the docks. The cost is estimated at about five millions sterling, of which the Government is contributing one-half through the Ministry of Transport.

Repair of Parliament Buildings.

It will be necessary for the Government, possibly next year, to submit to Parliament a large estimate for the repair of the fabric of the Palace of Westminster, and in order that members shall know the exact condition of the building, a non-party Committee has been set up to investigate the position.

Leeds Improvement Scheme.

Leeds Corporation has approached Sir Reginald Blomfield with a view to the preparation of designs for buildings on the streets between Victoria-square and Vicar-lane.

Old Bideford Bridge.

Old Bideford Bridge, a fourteenth-century structure of twenty-four arches, has been restored and partly rebuilt, at a cost of £40,000.

Mr. F. E. P. Edwards's Resignation.

Mr. F. E. P. Edwards, Sheffield City Architect, has resigned his position after seventeen years' service.

Obituary.

We regret to record the death of Mr. Vincent Craig, F.R.I.B.A., of "High Close," Wokingham, Berkshire, and formerly of Eldon Green, Helen's Bay, co. Down. He practised as an architect in Belfast for twenty years, and designed many buildings in Ulster.

St. Paul's Cathedral Preservation Fund.

The secretary of the R.I.B.A. has received a cheque for £30 9s. which has been subscribed by members of the Institute of Architects of New South Wales as a donation from that body towards the St. Paul's Cathedral Preservation Fund.

The Norfolk and Norwich Association of Architects.

The above Association recently paid a visit to King's Lynn. The party included Messrs. E. T. Boardman (President), E. H. Buckingham, G. Cotman, F. W. and E. H. Skipper, C. Upcher and E. P. Rennie from Norwich, John Page from Fakenham, E. G. Holtom from Holt, and J. L. Carnell, W. D. White, E. E. Colman and L. F. Eagleton from King's Lynn, with the Honorary Secretary, Mr. W. W. B. Scott, and a number of Associate members and students. Visits were paid to most of the points of architectural interest in King's Lynn. After lunching at the Grosvenor Restaurant, visits were paid to the Town Hall and St. Margaret's Parish Church. The day ended with a visit to the interesting Greenland Fisheries Folk Museum, collected by Mr. E. M. Beloe, where tea was served.

Bristol Art Gallery.

Sir George A. Wills has offered to bear the cost of the extension and enlargement of the Bristol Art Gallery, which was given to the citizens by his cousin, the late Lord Winterstoke. It is proposed to utilise the site of the old Drill Hall, and plans have been prepared by Messrs. Frank W. Wills & Sons, who were the architects of the original building. The cost of the extension is estimated at £75,000. The Art Gallery adjoins the new University buildings, for which Sir George and his brother, the

late Mr. H. H. Wills, were responsible, and the whole block of the fine buildings which crown the summit of Park-street will stand as a lasting memorial to the civic spirit of the Wills family.

COMPETITION NEWS

Warwickshire Hospital Extension.

Designs are invited from architects practising in Coventry for a new ward of the pavilion type. The designs will be adjudged by an architect approved by the Secretary of the Coventry Society of Architects. Full particulars and conditions can be obtained from Miss Hooper, Secretary, Coventry and Warwickshire Hospital. Sending-in day, August 10.

Lincoln Art Gallery and Library.

Lincoln City Council has decided to recommend not to carry out the scheme already prepared for the building of an art gallery and museum. An open competition is to be promoted.

Public Library and Town Hall, Leith.

Edinburgh Town Council have decided to invite competitive plans for a public library and town hall for Leith.

Manchester Town Hall Extension.

A special committee of the Manchester Corporation has recommended the adoption of the scheme prepared by the City Architect in connection with the town hall extension site, and has given instructions for obtaining competitive designs.

Coventry Hospital.*

Sevenoaks U.D.C. Housing.*

Gower R.D.C. Housing.*

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Argentine Institute (Dec. 31; April 24). Copenhagen Bridge (Sept. 1; April 24). Newcastle Fire and Police Station (Oct. 8; June 12). Drammen Bridge (Oct. 1; May 29).

* Competitions when "warned" or vetoed by the R.I.B.A. are starred.

THE A.A. IN DENMARK AND SWEDEN

SOME IMPRESSIONS OF SWEDEN

By MANNING ROBERTSON

Of the seven days that we spent in Sweden six were devoted to seeing Stockholm and its neighbourhood, and one to Gothenburg, the journeys Malmö-Stockholm and Stockholm-Gothenburg being accomplished in sleeping-cars.

On the morning of Saturday, June 13, we were met at the station by a party of Swedish architects, who took us to our hotel and later drove us in private cars to obtain a general idea of Stockholm and of its innumerable islands set in the inland seas. Even seen superficially, Stockholm shows its cosmopolitan character; French, German and Italian vogues have all left their imprint, and the 19th century has bitten deeply into its form. For this reason its own robust renaissance is the more remarkable and encouraging. Evening saw us travelling by steamer to Saltsjöbaden, where, surrounded by the most perfect scenery, we were entertained at a banquet—and a dance—by the Swedish Society of Architects, with Professor Ragnar Ostberg, the president, in the chair.

On Sunday we were taken in private cars for a hurricane drive through vast pine forests to Mariefred, where we were the guests at a delightful open-air luncheon given in our honour by the Swedish-British Society. At Mariefred, on the shore of Lake Mälaren there stands the great sixteenth-century castle of Gripsholm; there we were introduced to Swedish traditional craftwork, and learned something of the origins from which is derived the Swedish proficiency in frescoes and colour on wall and beam. From Gripsholm we went by steamer—passing the delightful little Mariefred church with its Wren-like spire—to the Palace of Drottningholm and through the grounds to a queen's birthday present, the "China Pavilion"—a marvel of Chinese art and colour in its choicest and most aristocratic mood, devised in 1770 by Chinese craftsmen.

Monday was mainly devoted to visiting the Town Hall, the great City Hall of Stockholm that was completed in 1922, and of this I will speak at greater leisure when closing this brief diary. Late afternoon found us at the Skandia Picture Theatre, the design of which has been completed by E. G. Asplund. The architect's aim has been to place one building inside another, the inner building being designed as though it stood in the open air of a dark summer night. The auditorium and the gal-

leries are carried out in bright red, and are approached from without by bright red doorways under a canopy, while a hint of vivid green is introduced in the folded-back lining of the proscenium curtain; the roof is of velvety blackness, and this assists the open-air illusion. Light is provided by yellow globe lanterns hanging, as it were, in a garden. The whole scheme is a daring *jeu d'esprit*; it has "come off," and the effect is quiet and restful. The evening of Monday was the most enjoyable of our visit, and many of us had the privilege of being entertained to dinner in Swedish homes, and so saw something of the home life of the country. Our hosts were Mr. and Mrs. Ragnar Ostberg, Mr. and Mrs. Johansson, Mr. H. Ahlberg, and Mr. F. Wetterquest. Our evening satisfied us—we had we needed satisfying—of the charm, friendliness, and culture of Swedish family life. After dinner we went to a dance given by the well-known publisher, Mr. Bonnier, and his wife, and we saw yet another beautiful private house and garden in those circumstances of midnight day which we always found it difficult to accept as a matter of course.

Tuesday was busy, even in that crowded fortnight: first we were taken to visit an unforgettable cemetery, about four miles out of Stockholm, where the graves are placed informally among the pine trees. In the centre there rises a homely little mortuary chapel designed by E. G. Asplund, and well illustrating the flexibility of the new interpretation of classicism in Sweden; near by can be found a small "free" annex containing the graves of children. This little nursery provides that sense of intimacy and company that would be so warming to a child's spirit, if almost unbearably touching to a visitor. The grave-stones are small, of local stone, cut with delicate conventional patterns and beautifully lettered; other graves are marked only with the simplest of wooden crosses, the whole effect being of harmony with each other and with nature. One of our party suggested that the repose of the great pines constitutes a place to be lived in rather than to be dead in, and the remark indicates the distinction between this resting-place and our own modern cemeteries.

From the cemetery we visited Högålds Church, designed by Ivar Tengbom, with its elegant twin towers that match but are not

Högålds Church, : Side Aisle.

MR. IVAR TENGBOM, Architect.

alike, and that symbolise the Old and the New Testaments. The interior is fresh and original, with its windows hidden in huge arched recesses that are in fact internal buttresses. As in most other churches in Sweden, the altar-rail is semicircular, thus not only giving a more sympathetic line to the arrangement of the sanctuary, but also providing a sense of intimacy and communion between priest and people. The great organ at the west end was played for our benefit; we left reluctantly, feeling that we had seen a new and living impulse in what has so often been the most tame and standardised expression. We were then led to the Academy of Architecture and Engineering, where the architect, Professor Erik Lallerstedt, took us over this monumental group of brick buildings, through its deeply shadowed entrance arch. The effect of the free curve of the side wings and of the walled parapet containing chimneys and ventilators gave an unexpected charm and character for which none of the many illustrations, which we had all admired in this country, had prepared us. From thence we hurried on to the Engelbrekts Church, where we were privileged to hear Professor Wahlman describe his design and intentions. The interior consists of a central square approached from the four sides by great stone arches, that diminish from front to back and are apparently parabolas, but in reality prove to be freehand curves approximating to that shape. The wind pressure on the walls of the nave is taken on heavy reinforced concrete internal cornices, and the whole design is expressive of aspiring impulse and strength. We concluded with the Magistrate's Court, where we were met by Mrs. Westman and her son. This fine building, crowned with a square tower and cupola, represents a pioneer work, the first of the great modern buildings of Stockholm. It conveys, with a peculiar quality, the big nature and humour of its designer—Mr. C. Westman. It is broad-shouldered and robust and it is never self-important; as an imposing and efficient public building it is worthy of its city and of its author.

Dinner-time found us at the Foresta Restaurant, and we then took advantage of Professor Milles' kind invitation to visit his house and statuary garden, where we saw much that is representative of his genius, and—which is perhaps rare in first-rate sculptural work today—of its unusually decorative feeling. Wednesday and Thursday were free days in which the party broke up into little groups; one of them visited some of the flats and offices which have recently been erected by Mr. Stark ending with the attractive Silent-street—

A School at Gothenburg. MR. ARVID BJERKE, Architect.

Högalids Church : Interior.

MR. IVAR TENGBOM, Architect.

street of demure rough-cast houses containing some newly completed blocks of flats; some of us returned again to the Town Hall to verify previous impressions; some roamed about the Skansen Gardens, where log huts, a log church, reindeer, and polar bears make up an open-air museum of life in the far north. Visits were paid to the Lilliewalk's Konst Hall, designed by Mr. Carl Bergsten, to the Stadium, to the great Wine Warehouse, and to many other counter-attractions. Through it all we remember the untiring kindness of our hosts, who escorted, motored, and—in the case of Mrs. Tengbom and others—privately entertained us. The way in which our lady members upheld the honour of our Association by seeing even more than the men by day while outrying our hosts by dancing in the evening, must be put on record. Finally we come to the farewell at the station, when Professor Ostberg headed a large party of our friends to bid us farewell, and to close with Swedish and British *Hurras* a visit which will remain an event in our lives.

Friday was spent at Gothenburg, where the President of the local society, Mr. Ernst Torulf, took us in charge and motored us round the city and its surroundings. The small timber house gives its special note to the Swedish suburb and countryside, and cannot by its nature convey the same impression of architectural permanence as its counterpart in brick or stone. Here we saw in passing the Carl Johan School, erected by E. G. Asplund, with its daring yellow brick façade, its three tiers of square windows, flush with the surface, and its powerful cornice. We saw also a great brick school, designed by Arvid Bjerke, the huge new post office just completed by E. Torulf, and what remains of the Gothenburg Exhibition. Mr. H. Ahlberg's Arts and Crafts Pavilion has unfortunately disappeared, but the chaste beauty of the museum by Sigfrid Erikson and Arvid Bjerke is a permanency. Throughout the day we were entertained as guests of the local architectural association, and in the afternoon we went by steamer to the island village and the castle of Marstrand, which in natural loveliness of situation cannot be surpassed in the world.

Economy of space precludes an adequate description of anything that we saw; indeed it would take a book to describe one-half of all we observed and appreciated, and no words can express our gratitude to the architects of

Sweden and their families for the energy they showed and the hospitality they extended towards us. One can only say that admiration at a distance has been widened into personal affection.

I have left the account of our visit to the Stockholm Town Hall on June 15 to the last. We had all heard so much of the wonderful opportunity that was presented and of the beauties of the building that we were, perhaps, prepared to be critical. It is one thing to be given an opportunity, another to use it to the full. Granted a fine enough site and sufficient funds, any well-trained man of talent ought to be able to raise up something to arrest attention and even to command admiration. Ragnar Ostberg had at his disposal an incredibly magnificent site; he had on his side the enthusiasm of an art-loving public, and sufficient funds to ensure the execution of a stupendous project. Twelve years of his life had been entirely devoted to the erection of this one building; during this period he was able to call in every craftsman of exceptional ability in Sweden, and, with the force of his personality, to draw the best from each. What had he made of these opportunities?

Nothing of dramatic significance was lost in our introduction to this amazing building. The architect took us first up the tower and told us something of the methods whereby he had achieved the vitality of its outline, then through the various minor apartments into the tremendous Blue Hall, where the walls that were to have been plastered and coloured blue now show common pressed brick, cut everywhere into panels with chisel and hammer as though they were of solid stone. This daring experiment results in a wall texture that glows like a Persian carpet. After an informal reception by the President of the Town Council, and a luncheon given by our architect hosts in the Three Crowns Chamber, we proceeded in pairs, to the sound of music, into the great Golden Hall—flooded with light from gilded arched window recesses—where, from the far end, the mystic Queen of the Mälaren looks down in mosaic through the length of the Hall towards the lake on which she, the City of Stockholm, stands.

If we attempt an analysis of this building the source of its beauty evades us. Free and romantic, it yet combines every appeal, and at the same time stands fearlessly exposed to criticism. It is not like a town hall: it is too personal; its details are borrowed; it is not Swedish; it is unsuited to its purpose; these and similar points one has long since heard urged against it. But it stands beyond the reach of praise or blame, linked with ships and the sea, a supreme monument to human genius. It conveys a heavenly message, and like a Beethoven symphony invites attack while boldly taking its place for all time with those art creations that seem sufficient in themselves to justify man's existence, its sublime beauty summarised in the text beaten into the copper cupola: "Glory to God in the Highest, and on Earth Peace, Good Will toward Men."

The Silent Street, Stockholm.

A.A. VISIT TO AUDLEY END

On Saturday last the Architectural Association visited the great Jacobean mansion of Audley End, Saffron Walden, and, by kind permission of Lord Braybrooke, spent an interesting afternoon exploring its many apartments. Said to have been begun in 1603 and completed in 1616, the house was originally somewhere about twice its present size, but on the advice of Sir John Vanbrugh three sides of its outer and more important quadrangle were demolished, leaving it a half-H on plan. Externally it was rather drastically restored in the eighteenth and nineteenth centuries, but the interior contains much of its original work, which is of no little interest to the evolutionist.

Its main feature is the Great Hall, 65½ ft. by 26 ft. At one end is an early seventeenth century oak screen lavishly decorated with carved torsos, strapwork and arabesques, while at the opposite end is a stone one, designed by Vanbrugh. These two screens provide a striking contrast in architectural style—the one decoratively complex, the other plain and stolid.

The most interesting apartment on the first floor is the Saloon, or Fish Room, so-called from the aquatic subjects introduced into the thirty panels of its plaster ceiling (66 ft. by 30 ft.) which is further distinguished by pendants at the intersections of the ribs.

As a relief to the rather florid work of the early seventeenth century, which includes staircases and chimneypieces, there are some good Adam rooms, with characteristic decorations on wall and ceiling, delicately modelled and coloured. Also, there is a fine collection of pictures, including works by Holbein, Lely, Kneller, and Canaletto. The A.A. party included Mr. Arthur T. Bolton, Mr. H. M. Fletcher, Mr. Howard Robertson, Mr. V. O. Rees, Mr. F. R. Yerbury, Mr. J. H. Kerner-Greenwood and others.

The Eastbourne College War Memorial Tower.

The dedication of the War Memorial Building and the unveiling of the Roll of Honour at Eastbourne College recently took place.

The War Memorial Tower, which was designed by Messrs. Sydney Tatchell and Geoffrey C. Wilson, F.F.R.I.B.A. (Mr. Wilson being himself an Old Eastbournian), forms the central feature of some new and extensive additions to the school buildings, consisting of north and south blocks on either side of the tower, which will eventually link up the existing buildings with the new additions by means of cloisters.

This central tower, from the nature of its height and size, will always focus attention, and for this reason becomes the war memorial proper, having been designed so as to be the chief external architectural feature of the school buildings. It contains on the ground floor the war memorial hall, entered through wrought-iron gates from either the cloister on the playing fields or the headmaster's garden, on an axial line from College-road.

The hall itself is a vaulted compartment 26 ft. square, marble-panelled on the north and south sides, the east and west walls being occupied by the wrought-iron gates on which is inscribed, "In Memoriam, 1914-1918." The marble panelling is inscribed with the names of the fallen in eight panels, two on each side of the north and south dedicatory inscriptions, which are surmounted by the school arms with a bronze laurel wreath below.

The cloister, which runs along the whole of the new additions, is on the west side of the tower, and there is an entrance forecourt on the east side.

The first floor contains the new school library, and there are four music rooms and two other rooms on the second floor, third and fourth stages from the tower, from the flat roof of which the school flag is flown.

The remainder of the work, of which the War Memorial Tower forms the central feature, is practically completed so far as the south block is concerned. The north block has yet to be commenced, the problem having been to design a war memorial which should form a part of a scheme of further additional school accommodation.

The completed south block contains the armoury and drill hall, five new classrooms and a manual instruction workshop about 60 ft. in length. When the north block is put in hand, the school will replace its present science accommodation with three new physics laboratories, a large chemistry laboratory, balance room, two rooms for science masters and four more additional classrooms.

The elevations are simple, and balanced with the tower as a central feature. Tradition and the scale of the existing buildings have been carefully studied, and a free Tudor inspiration in brick and stone with a tile floor adopted.

The general contractors are Messrs. Walter Lawrence & Son, Ltd., and the principal sub-contractors are as under, the stone carving having been executed by Mr. George Alexander:—Durbin & Katesmark, central heating; Thomas Elsley, Ltd., rain-water goods; F. G. & S. H. Frost, wrought-iron gates, &c.;

Jacob White & Co., Ltd., electric light and power; The Kleine Patent Fire-Resisting Flooring Syndicate, Ltd.; Smith, Walker, Ltd., constructional steelwork; C. E. Welstead, Ltd., lead light casements.

Our Special Supplement.

In connection with the R.I.B.A. Annual Conference, which is being held this week, we present with this issue a Special Supplement dealing with the architectural features of Newcastle and Durham.

CORRESPONDENCE

Manchester Art Gallery Competition.

SIR,—Allow me to thank you for publishing my letter about this matter. I have already received a number of letters in support, but I must appeal very strongly to all those who agree with your statement that "if ever there was a breach of conditions it is here," to come forward and give their support. The matter has been well ventilated in the Manchester press, but we want it to be well ventilated in our own councils.

Nothing can be done by one or two persons, but much could be done by a united body of competitors. Those who agree that here is a case for investigation and that the time has come to make sacrifices, owe a duty to themselves and to their profession to come forward.

I shall be glad to act as secretary *pro tem.*; but I propose no course of action whatever until such has been settled by a sufficient body of competitors. I do not want anyone to think that he is pledged to any particular course. Any letters will be treated with the strictest confidence.

—KENNETH GLOVER.

11, Saville Chambers,
North Street, Newcastle-on-Tyne.

Competitions.

SIR,—Having noticed that every public competition produces varying opinions regarding the awards, I venture to write to you on both sides of the question. My views are entirely disinterested; moreover, they are expressed in the hope that certain reforms will be effected.

A competition, like marriage, is largely a matter of chance—a species of lottery raising false hopes, or, for the majority, ending in disillusion. There is no denying the fact that some remarkable buildings have been achieved by publicly advertising for designs; nor can it be said that assessors lack in ability. What, then, is the cause of the widespread dissatisfaction—that undercurrent of suspicion and jealousy which often follows in the wake of competitions? In the first place, few practising architects can afford to enter a competition which entails great expense and labour. They may, if work is quiet, decide to venture, especially if assessors are men of knowledge. The fact, however, remains that the field is generally left to the younger men and students who, fired with the idea of attaining instant renown, stake their all on the gamble.

I am not one of those who write on minor questions of the width of corridors or the line of the drainage, neither is it my purpose to question the taste of assessors who may or may not have definite ideas of architectural style. My remarks are directed almost entirely to the way in which the conditions are framed. Having the advantage of moving among assessors and competitors, both sides of the question are clear to me. The procedure usually followed is for a public body to determine the nature of a project and to draw up a list of requirements. The Royal Institute of British Architects is then approached to nominate an assessor or assessors. A new programme is drawn up, the site is examined, and the competition advertised. So far, so good. It would be more to the point, however, if the assessors and the competitors adhered to the conditions. As it frequently happens, both parties find it convenient to put the blind eye to the telescope—a fine gesture, but scarcely fair. Those accustomed to working in committee realise how difficult the drafting of procedure can be made. Is it to be wondered at that assessors make slips, and clever competitors follow the line of least resistance?

Writing to you, Sir, in a dispassionate frame of mind, and as one who never dares to enter the thorny paths of public competitions, I am of the view that our learned and respected assessors would gain fuller confidence from the public if they were to plan the proposed building or buildings in sketch form, grouping the chief items of the programme in order and thereby ascertaining whether a scheme could be worked in agreement with the written word. They would then state in precise and dignified language that any departure from the conditions, however brilliant, would disqualify. Neither would it mean that the assessors would have decided the result before the event. In the words of an old legal document: "to be tried on Tuesday and hanged on Friday." It would at least ensure the assessors knowing beforehand whether the programme was overloaded or not, and also whether the site could carry the requirements. I feel certain, Sir, that such a simple modification would do much to help all parties, and would result in a gain to the art we follow.

EDWARD MASSINGHAM WARBOYS.

Fires Due to Electrical Causes.—"Protective" Metal Casings.

SIR,—I feel that it is necessary to draw the attention of architects and builders and fire insurance companies to the risks attendant upon the use of metal coverings for safety fuse gear, aggravated as it is by the fact that all such metal coverings have to be "earthed" in accord with regulations. On a recent occasion the fuse boxes and interiors were of a well-known manufacture with porcelain carriers of special design where the length of fuse wire channel was appreciably longer than the actual straight line measurement between terminals, the porcelain carriers being in too close proximity to the metal cover.

A fault developed on the installation, with the result that the "safety" distributing fuse created an arc between its terminals and the metal cover ('earth'), the main fuse operating in similar disastrous manner. Fortunately the resultant fire was arrested in its incipient stage, otherwise there might have been another detrimental lay-press report of a fire in a public place of entertainment, believed to be due to electrical causes.

Great care should be exercised in the design of such gear; there should be adequate spacing between terminals and metal covering, or the metal cover should be adequately insulated by an indestructible, fire-proof, non-hygroscopic lining from adjacent sources of possible arcing, "earthed" metal being inflammable under such circumstances, and tending to maintain destructive arcing. The same applies also to iron-clad switch-gear.

Also, adequate means should be provided for the extinguishing of an arc in its incipient stage, and the actual straight-line measurement between terminals and between the latter and the metal covers should not be lessened on the score of reducing the cost of materials. Safety and immunity from fire risk should be the first considerations.

There is still much to be said in favour of the good, though it may be said to be old-fashioned, hardwood cover, suitably ventilated and amply proportioned with long-break cartridge fuses, together with a wiring system now obtainable in which there is an agreeable absence of metal encasements with all their troublesome "earth" bonding gadgets—several of questionable efficiency in permanency of good current-carrying capacity, but all costing money.

I mention long-break fuses in view of the foolhardy temporary expedients that have been and apparently will always be adopted in emergency when proper replacement carriers are not readily available. Trusting you will see your way clear to issue this note of warning in the mutual interests of public safety and the welfare of electricity.

Durham Castle and Cathedral.

THE R.I.B.A. CONFERENCE AT NEWCASTLE AND DURHAM

THE ARCHITECTURAL VISITOR TO NORTHUMBRIA.

By PROFESSOR R. G. HATTON, M.A., A.R.C.A.

FROM Middlesbrough to Berwick, and across to Carlisle, is one of the "provinces" into which our land naturally divides itself. Newcastle-upon-Tyne is the social and commercial centre of it, but is not its capital. There is no provincial capital. Our system of local government precludes the development of provincial sentiment, and, instead, only magnifies local jealousies. Hence, while our administrative buildings are many, they are of little consequence, and usually are pretentious, through straining to express importance. Excepting the old Town Hall at Berwick (and Berwick had always a peculiar and doubtful independence of its own), perhaps those at Middlesbrough are the most dignified.

Precisely opposite conditions produced the magnificent pile of Durham. In the old days all eyes, whether for devotional, ecclesiastical, or civil reasons, were turned towards Durham. There, the miraculously incorrupt body of St. Cuthbert lay, and there his powerful successors the Prince-Bishops, ruled supreme over all persons, ecclesiastical and civil. Even the king himself was here of little account.

Durham, or *hill-island*, is built upon a rocky peninsula, long and narrow. Leland wrote:

"The towne self of Durham stondith on a Rokky Hille: and stondeth as men cum from the South Cuntre on the North Ripe of Were: the which water so with his course naturale in a Botom windith about, that from Elvet, a greate Stone Bridg of 14 arches, it crepith about the towne to Framagate Bridge of 3 arches, also on Were, that betwixt the 2 Bridges, or a little lower at S. Nicholas, the toune except the length of an arrow shot is brought in *insulam*: And sum hold opinion that of auncient tyme Were ran from the place where now Elvet Bridge is straite down by S. Nicolas now standing on a Hille: and that the other course, part for policy, and part by digging of stones for building of the Town and Minstre, was made a valley, and so the water-course was conveyed that way,—but I approve not ful this conjecture."

Upon the extraordinary beauty of the city as seen from the railway, there is no need to dwell. It is unsurpassed. And not only do the masses of the Cathedral and the Castle agree perfectly, but the lines of the town itself and of the river, and even the spire of the otherwise negligible church of St. Nicholas, carry out the theme, and melt it away in the

distance. The colour at evening is usually very beautiful. Then, too, the low rays of the sun illuminate the planes of the buildings, and show up their happy proportions.

Perhaps what is of greatest importance in architecture is the relation of the building to the lie of the land. Unless this is perfectly effected, the mind cannot rid itself of the idea that the building ought not to be there. But if it is effected, the buildings seem so to belong to the land that it is as if Nature herself had raised them. It is because this relationship is so perfect at Durham that the place has so poetic an effect. To understand the problem we must grasp in our minds the whole structure—the rocky peninsula and the two bridges—whether we see them or not. With this whole structure the planes and the bulks of the Cathedral and the Castle are in perfect sympathy. The Keep of the Castle is exactly right, both in bulk and in position.

The western towers are extraordinarily beautiful. Nothing could exceed the value of the openings of the upper part. But so quiet is the design that a peculiar solemnity reigns over them, and they seem so aged, and are so attuned to the ground on which they stand, as

Plan of the Valleys and Ridges on which Newcastle stands. The ancient wall is shown.

Plan of the streets laid out by Grainger in the second quarter of the Nineteenth Century (shown in thick line). Dots represent line of old wall, parts still standing being shown in castellated line.

to assume the fixed and unalterable nature of the rock itself. They seem to be returning again to the universal sleep of things, "When Time is old and hath forgot itself."

The central tower, younger and ampler, more proudly rears its head—as if it still bore sway. How slight are the projections which make the beautiful outline!

But much of the beauty of Durham lies in its ancient stone bridges. Substitute steel ones, and the peculiar rhythmical beauty of the place is destroyed. And it seems to me that the knowledge of the presence of the bridges, although the two can never be seen at once, is extremely important. If architecture were to be judged and enjoyed solely pictorially—that is, by taking views from this point and that—we might admit that what we cannot see does not matter. But the mind enjoys architecture as a correlation of solids and dimensions, and these it does not apprehend by taking views.

In any bringing of Durham up to date—if that need be done—it is vitally important to preserve the bridges as they at present are, and any new ones should be of stone. The narrow streets, too, should be kept as they are. Some other way to satisfy a petrol-driven world can be found.

Inside the Cathedral the greatest things to me are the columns in the nave. With this article is a reproduction of several photographs of them. To me these columns have somewhat the same quality as have those of the Parthenon. Their proportions are so perfect that they seem verily to be almost alive. Their delicate execution here and there, as on the lower edge of the abacus, will be noted.

The thirteenth-century work of the choir and of the Chapel of the Nine Altars, athwart the east end, is remarkable for its vaulting and for its carving. Some examples are given in the illustrations. Other architectural details are illustrated, too, which the architect will see the importance of. One cannot but mention a few of the principal features in or about the Cathedral—the Galilee Chapel at the west end, the wall-paintings within it, the famous sanctuary knocker on the north door, the iron-work on the south door, the font cover, the tracery of the north window, the vaulting of the Prior's kitchen, and the Dormitory, now the Cathedral library. In the library are preserved fragments of St. Cuthbert's coffin and other relics of his sepulture.

The Castle, overshadowed by its mighty neighbour, is important and rich in interest. But he who visits Durham should fall into the able hands of Mr. W. T. Jones, F.R.I.B.A., than whom nobody knows more about all these things.

View of Newcastle at end of the Seventeenth Century.

In and about Durham are three or four small parish churches. In St. Oswald's, over the river, there is a window by Ford Madox Brown which is worth seeing, not perhaps as a window, but for the expressive figure subjects included in it. In some of the churches, too, one meets with, and is generally rather shocked by, windows by Wailes of Newcastle, who flourished about 1860. Wailes sent his artists to Chartres and Bourges to study the glass there—the fame of Louis Philippe must have spread to these parts—and they brought back, and kept on using, patterns, figures and canopies which they copied there. Wailes mistook the distance at which work of the type he was imitating should be viewed. Viewed a long way off some of his windows melt into a rather pleasant violet tint.

On the way from Durham to Newcastle we pass Chester-le-Street. Here the body of St. Cuthbert reposed for about a hundred years during that strange pilgrimage of it. The saint had earned in his lifetime a great name. There was every reason to revere him. But when his body was exhumed some few years after his death it was found to be "whole and incorrupt, the joints supple." This miraculous preservation raised him to a position of veneration so high that he became not only the

patron saint of these parts, but the centre of religious, and even of civil life. The story of his body, the *Corsaint*, being carried hither and thither for safety, and its final sepulture at Durham, is a theme which no one who treads the soil of Durham, or indeed of Northumbria, dare omit to be familiar with. The *Lindisfarne Gospels* in the British Museum, which is one of the greatest art-treasures of all time, was made in honour of Cuthbert, not long after his death; made, too, at Lindisfarne, Holy Island as we now call it. Such a work, and the Venerable Bede's learning, attest the high civilisation of our "province" in what, in our impudence, we call the Dark Ages. Perhaps to be properly civilised we have to have soda fountains, oyster dives, movies, and electrically illuminated signs. No, it is highly probable that Cuthbert and Bede were not civilised—but only intellectual. Anyhow, we cannot dispel the material evidences of faith which are here before us—at Jarrow, Monkwearmouth, Holy Island, Hexham, Escombe. At Monkwearmouth are some carvings of more than ordinary interest.

Newcastle-upon-Tyne is a fairly picturesque place as modern industrial towns go, but it is painted in greys. In the old days it must have looked bonnie in its green, blue, white, grey,

brown and red. The Roman Wall passed through it. It was a Roman Station—Pons Ælii—so named from Hadrian's bridge. This bridge was at the point where the Tyne (which is a tidal river for twelve miles) is first passable. But whatever Newcastle was in Roman or in Saxon times, it does not assume architectural importance till the twelfth century, when the present Keep of the Castle was built. The Keep (we call it the Castle) was built about 1180, and was put into repair and roofed early in the nineteenth century. All the outer buildings except the Black Gate, and a short stretch of wall, wherein there is a postern, are gone. Inside the Castle is as gloomy as one could wish. The Chapel has some pretty work, but perhaps what has most distinction is the solitary central pillar in the dungeon. Its proportions make it almost a person—a grim sentinel. The Castle is in the hands of the Society of Antiquaries, and houses an interesting collection. An important collection is also in the Black Gate.

But our Province is rich in castles. Raby in County Durham is one of the best. In Northumberland they are of all sorts, and sizes, from Alnwick down to the Pele-towers, which not infrequently form part of a vicarage. Warkworth Castle (which is now in the hands of the Board of Works) was taken, it will be remembered, by Viollet-le-Duc as an exemplar for a country mansion. Norham Castle, on the Tweed, is also in the hands of the Board, and is being excavated and put into a sound condition. The excavations have revealed most interesting structures. The province, too, includes several ecclesiastical buildings of interest, if eclipsed in importance by others elsewhere. There are Carlisle, and Lanercost, and Hexham and Tynemouth. Lindisfarne is a miniature Durham. Of the churches the most conspicuous are St. Cuthbert's, Darlington; St. Hilda's, Hartlepool; St. Michael's, Alnwick; Ryton, with its early lead-covered spire; Staindrop, and Norham, which has very delicate late Norman mouldings.

But no feature of mediæval architecture is more distinctive than the tower of St. Nicholas Cathedral, Newcastle, with its lantern carried on arches. The upper half of the tower is perfect. The lower part is ordinary, but perhaps was always more or less hidden in the old days. The vaulting under the tower is interesting: an illustration is given of it.

Inside, St. Nicholas's is a plain, spacious affair, and has been rendered peculiarly satisfactory by the wood screening and the reredos which R. J. Johnson put in about thirty years ago.

The stained glass is of little consequence, but is an interesting if not an exhilarating display of the efforts of the nineteenth century. One laments the sacrosanct nature of stained-glass windows. In the Englishman's mind there is no sacrilege equal to that of smashing a stained-glass window. Newcastle, from Wailes onward, has done a good deal of stained glass, reaching often a respectable level of execution. The glass itself is made to-day at Sunderland. Sowerby's, of Gateshead, made some fine material in the days when they experimented with glass which had quality. A window in Walker parish church is made of their glass. In and about Newcastle there are some windows of the less conventional type. There are two good lights by Burne-Jones in St. Cuthbert's, Melbourne-street, and two in St. Helen's, Low Fell. At Brampton there is a good deal of his glass—the east window being particularly fine—and there is a beautiful little window in Lanercost Priory, near Naworth. At Haltwhistle the east window is good, and apparently an early Morris or Madox Brown. There is a window by Dyce at Alnwick. Of modern rebellious efforts there is an example at St. Luke's, Wallsend—worth seeing if only to estimate whether it is right to do windows in that way or not.

The monuments in St. Nicholas's are much better than the glass. There, too, is a picture by Tintoret, which, however inappropriate in other ways, has the same spaciousness as the building itself.

Durham Castle: The Kitchen, showing Bishop Fox's Fireplaces, 1499.

The visitor's chief interest in the architecture of Newcastle will probably be in the layout of the central part of the city. I have indicated at the beginning of this article what seem to me to be the reasons why civic architecture is of small importance in our towns—it is the absence of any local interest greater than that of a few parishes lumped together. Before the railways developed the people of a county flocked to their county town. There was even some sort of a season. Some of the houses of the noblemen and gentry of this county still stand within our walls. But things are changed now, and there is even the danger that the poorer people, as well as the wealthy, will less and less think of a town as a civic centre. They will know where the rate collector's office is, but beyond that they will display little interest. To them the town will be a shopping centre, a cinema centre, a medical centre, and perhaps an educational centre. The trading houses are more likely to make an architectural splash than the municipalities, and perhaps it is symptomatic of this that our best modern buildings in Newcastle are such things as Lloyd's Bank and the Northern Assurance Offices, both in Collingwood-street, and both by R. J. Johnson. The merit of these buildings is obvious. The style which Johnson favoured was followed for a while by other architects. There are two good, though small, commercial buildings in the central part of Pilgrim-street, following this lead. But after these, and a few more, a freer style came into vogue, and buildings ceased to be neighbourly in appearance. Advertising began to be pursued, and necessarily forbade one man's building looking the least like another's—and a

pretty mess things will get into, unless the co-operation amongst architects, now happily arising, comes to the rescue.

The architectural visitor will probably find that town planning is in the air in Newcastle, and he may form some opinion of what has been done in this way in the past, and is likely to be done in the future. For it happens that Newcastle trod the same path between the years 1820 and 1850. To speak of this singularly takes us back to mediæval times, and the "lie of the land."

We have seen that Newcastle is where it is because it is here that the Tyne is first passable. Even now, when railways and bridges are easily flung here and there, Newcastle remains where it was—because it is here that the high grounds on either side of the river come most nearly together, and simplify bridging. But Newcastle unfortunately lies on ground intersected by rivulets, or burns, which, though insignificant, and now mostly underground or drained away, had channelled out valleys which are deep enough to make road-making across them expensive.

The little sketch map shows these valleys and the ridges between them. It shows also the low-level bridge, now the Swing Bridge, where also the ancient bridges were; and branching from it two roads, which are in dotted lines. Each of these roads climbs a ridge by a bent path. Between these ridges is, or was, a small burn—the Lork Burn. The roads encircle the valley of this burn, and then reunite, and pass on to Berwick. By the left road one went to Scotland by way of Otterburn and Jedburgh. The little plan also shows the town wall, and the line of the Roman Wall

passing, east to west, to Carlisle. The Cathedral is shown by a cross, with the Castle, a square, beside it. On the other ridge a cross indicates All Hallows, now All Saints, and now a classical building with a conspicuous spire. It will be seen that the Lork Burn occupies the heart of the old town, and it must be remembered that when the nineteenth century opened there was not very much outside the walls. In another drawing is given a conventional view of these conditions (see p. 48). On the walls there now remain only two stretches, the west walls and a stretch in Orchard-street, immediately east of the station. These are marked in dark castellated line in our diagram.

Walls of Newcastle.

1. The old bridge; 2, the Guildhall; 3, All Hallows (All Saints) on the ridge, on which 4, Pilgrim-street, runs north through 5, Pilgrim Gate, to 6, which is now Northumberland-street, which joins at 7, Barras Bridge, the street 16. to proceed north, 8, to Berwick. 9, the Castle Hill, up which the "side," coming from the bridge, winds and passes 10,

between the Castle and St. Nicholas's, and continues as 11, the Bigg Market, and 12 Newgate-street, with 13, the Friars, and 14, St. Andrew's, on the left. passes through 15 New Gate, and so up 16, the street now Percy-street, to the north, or else north-westward by 17, Gallowgate, to Otterburn and Scotland. 18, The Skinner Burn. 19, the site of the railway station. 20, The road to Carlisle, through 21, West Gate. 22, The Line of the Roman Wall, shown with dots and passing to the right past 23, St. John's, and then St. Nicholas's, then down the dene and up over All Saints' Ridge, down over Pandon Bridge, and through the Sally Port, 30, to Wallsend. 24, The west walls. 25, the Lork Burn, making a valley down the middle of the city. 26

The North Walls. 27, Pandon Burn, which has passed under 7, Barras Bridge, and makes a valley east of All Saints' Ridge. 28, Shieldfield. 29, The Ouse Burn. 30, Sally Port. 31, Sand Gate, from which a wall ran parallel to the river to 32, Close Gate.

Newcastle : The Castle.

beginning of the eighteenth century, we see Anderson Place and the open land of the Lork Burn. We see also the North wall of the town, Pilgrim Gate, in the right foreground, the New Gate at the far end of it. Upon the site of this piece of the wall and the sixty foot ditch outside, the present Blackett street runs. Newcastle, therefore, in this particular, follows the Continental system of having a boulevard where was a bulwark.

This open area of the Lork Burn was the ground laid out by Richard Grainger in the years succeeding 1834 in his town-planning scheme, which gave Newcastle its present appearance.

But before we take note of Grainger's work we must refer to two previous periods of building.

Newcastle : Chapel in the Castle.

Leland wrote of the walls : "The strength and magnificence of the wauling of this towne far passeth all the walls of the cities of England, and most of the townes of Europa." One is always sceptical of praise of this sort, but I see no reason to doubt that Leland got this impression, and if he did I do not see why the grouping may not have befallen so as to make a striking picture. For the slope of the ground would permit a spectator standing on the Gateshead side to see practically all the walls and towers at once, and, of course, the castle was then a considerable group of buildings. The view from Gateshead at full tide must have been impressive. Leland's remark merely emphasises the gain obtained by designing sympathetically with the conditions of the site. You get full æsthetic value for your money.

Now the important circumstance in Newcastle's town-planning was the clustering of the buildings around the circumference, within, though not against, the walls, leaving the area of the Lork Burn free for garden space and pasturage. The upper part of this valley, in mediæval times, was in the possession of a nunnery, but by the seventeenth century it belonged to the house of Mr. Blackett. This house ultimately became known as Anderson Place. It stood where the Theatre Royal now stands. In another illustration, which is of the

Bench End, St. Mary's, Gateshead.

Newcastle : Friars' Doorway to the Smith's Hall.

Durham Cathedral: The Nevill Screen.

One is the Tudor-Stuart period, which gave us the beautiful half-timber, half-glass, houses of which a few still remain—fortunately in good hands—on the Sandhill. They are represented in Mr. Bertram's etching on page 61. I should think anyone an utter barbarian who did not like these houses. They are of a craft-work type. Inside they are panelled and have fine fireplaces. One such fireplace is preserved in the castle.

To the same time belongs the Guildhall on the other side of the Sandhill. This building has undergone two or three transmogrifications. The hall itself, upstairs, is a pleasant, clumsy, opulent-looking affair, and is at present disfigured by temporary partitions to provide corporation offices. Adjoining the hall is the old Mayoral Chamber, very good of its kind. Nearby is a lock-up for here formerly the assizes were held, as the furnishings witness. Some legal formalities still go on here, I think. At the east end is the stately Merchants' Court, renovated in 1835.

On the staircase, as he ascends, the visitor with historical sympathies will have doffed his cap to his Sacred Majesty King Charles II. He is in bronze, in a Roman habit, but with his own unmistakable face. His Majesty now presides over a coal-bin, some dust buckets, and, at times, an array of empty milk bottles. There is great sentiment in Newcastle for "Old Newcastle," but there is little regard for the relics of it. Another instance of this neglect is the state of the Friars. The Friars is the remains of the monastic buildings near West Walls. At the Dissolution the buildings passed to the town, and were let out to certain of the trade guilds, mysteries or companies. Two or three still hold their courts there. The doorway to the Smiths' hall is a pleasant, clumsy affair; but the buildings are falling into disgusting squalor. To the Stuart period also belongs the Holy Jesus Hospital, sunk below the north side of City-road, and formerly looking down Pandon Dene. A little further, and a little later in date, and formerly just outside the walls, is the Keelmen's Hospital. Belonging to the same, and to earlier times, is the Trinity House, in Broad Chare, which comes out at the Quay. There is much of interest here, including a good little chapel.

The other period of which we should speak is that which, for convenience, we may call 1775. Then, as now, there was no care for vestiges of

the past; all efforts were towards making the city convenient and elegant for the time being. This 1775 period is one of refined classicalism. The principal examples are All Saints' Church and the Old Assembly Rooms. A front was

stuck on the Guildhall at the same time. A building, now gone, was the Dispensary. The old Infirmary still stands (one passes it as the train draws into Newcastle from the south), and then there are the elegant houses in Savile-row and Ellison-place, a few houses still remain in Northumberland-street. One bowed shop front remains in Percy-street. The style passed on into the nineteenth century. Higham-place (in a house in which the Northern Architectural Association has its home) is an example, and there is a pleasant stretch of houses at the top of Northumberland-street, where their good proportions are helped by slight changes in the angles of the sites. In houses of this type the woodwork is generally delicate. In the county there were many mansions erected of this elegant style. James Payne built Axwell Park, Bywell Hall, and Gosforth Hall. Sir George Trevelyan's house at Wallington is a particularly beautiful example. Earlier, at Seaton Delaval, Vanbrugh had put up one of his stately palaces. We give some photographs on page 68. The place is now more or less a ruin.

The elegant classical buildings in Newcastle embellished the town, but did not alter it, beyond extending the suburbs. The sketch plan given on p. 47 shows some of the places we have mentioned. They are all still on the circumference. The suburb chiefly developed was the area north of the Blackett-street. Probably this development was a bar to Grainger's actions. He may have dreamt of the new property there being scrapped.

Here and there one meets with good ironwork. There are good wrought-iron gates at Tanfield, and a decaying specimen is at the Manor House, Jesmond, Newcastle. Later come the cast-iron gates; of these a good pair are at Gosforth Park—too little thought of nowadays, I think—and there is a good cast-iron railing (not of the spear type) at the corner of Jesmond-road Newcastle.

Early in the nineteenth century a craze for improvement set in—perhaps it was like our own case, following a war. The most important thing done was the abolition of the prison in the New Gate. New Gate had been the town prison for a long time; so, about 1820, they decided to get a new jail, and pull down the old one. West Gate was at that time also standing. It was to be pulled down as soon as a meeting-place for the “city company,” which met in a room over it, could be accommodated elsewhere. But the most notable improvement was the filling in of the lowest stretch of the Lork Burn, and the making there of a new street—Dean-street. This gave a gentler, if still a steep, ascent from the quay. Across the head of it Mosley-street was also formed, with the Greek “Royal Arcade” at the east end of it. The projectors of Dean-street would have carried it on up if the owners of houses in the Bigg Market and in Pilgrim-street would have sold their gardens which ran down to the Lork Burn.

It was at this time, too, that the Greek Moot Hall was built on an old site. And Dobson, the architect, had a scheme for improving the area round about the castle. He would make the Castle a debtors' prison. Poor debtors! He also designed the Academy of Arts, in Blackett-street, and the Lying-in Hospital in New Bridge-street, nearly opposite his own house. He also added a Greek piece to the Guildhall. His churches are all about, in various styles, according to the books.

In all these buildings, book-learning had taken

the place of invention, and the same reliance upon the copper-plate example was to dominate the great resurgence of the civic spirit which owed itself to Richard Grainger. Dobson was the architectural shade which hovered, and at times the shadow which lay over Newcastle. Grainger was a different sort of person. Perhaps inspired by Regent-street, he was impatient of isolated efforts, and proceeded on a plan. He acquired Anderson-place, and all that parcel of land which lay westward of Pilgrim-street for nearly a quarter of a mile—in short, the upper part of the valley of the Lork Burn.

Grainger was born in 1798. Of poor parentage and charity-school education, apprentice to a house-carpenter and builder, he followed the career of the romantic novel and married an heiress with £5,000. In his early days as master-builder he built Higham-place and Blackett-street, and as a speculator, Eldon-square (1826), Leazes-terrace and crescent, and the Royal Arcade (1832). These projects preceded his great scheme (1834) for building the middle of the city.

Grainger's planning seems to have been controlled by these principles:—1, that main roads should be level, leaving decivities to cross-roads; 2, that blocks should be of some simple geometrical figure; 3, that a uniformity of style and height of building should prevail throughout, no matter what purpose the building served; 4, that there should be some marked difference in important buildings; 5, that regard should be had to vistas; and 6, that services (market,

exchange, theatre) should be in some specified positions.

The style adopted was classic Roman, varying into Greek, but not into the Doric. The sketch plan (see p. 47) shows Grainger's lay-out in thick lines. There are four main streets, two and two, the two innermost meeting at an angle and both, therefore, having Grey's Monument at its head. The monument was designed by John Green, who, with his son Benjamin, also did the Theatre Royal. The base of the monument is so Gargantuan in its detail, though doubtless right according to the book, that one feels uncomfortable when near it. The Bank (Lambton's, now Lloyds) is the best building of the whole scheme, unless the Market, which was one of the first things done—and done by Dobson—is not the best of all. I am speaking of the inside, which is remarkably dignified. It is now made squalid by advertisements and irregularities of all kinds. The market is Corporation property, and is a good place for a modern municipality to show what it can do in the way of having regard for the amenities of life. Dobson's Bank of England, in Grey-street, has a clever double parapet. The building seems to me to lack a central, or a flanking, note. It must not, however, be taken by itself. Grainger always treated a block as a single building, almost invariably with a “centre” and “wings.” The Bank of England is such a centre, but the slope of the street disintegrates the whole.

At the time the buildings were put up

Grainger's streets must have looked very well. There must have been some civic feeling about in those days. But his streets were fronts first, and useful buildings afterwards. The part out of sight was not too well planned or built in some cases.

Grainger's scheme stopped at the Bigg Market. Grainger-street West is a later prolongation. The Central Station, also, was not part of the scheme, but it goes with it, largely because Dobson was the architect, and more or less kept the style going. But I do not think the man who made Grey's Monument, to be seen up Grey-street, and up Grainger-street as well, would have given Grainger-street West so poor a view of the Station as it has. And one cannot but wonder what Grainger would have thought of our poles and wires, and huge gilt letters of all kinds disfiguring his trim facades. Surely there is a squalor of civilisation that is not of the slum but in the main street. Even the shade of Dobson—revered name as it once was—has not saved his Station from a particularly vulgar sign—the vista down Grainger-street—but it is proverbial that a railway company has neither soul to save, nor body to kick. The directors, as all our traders generally, can retire to their sweet places in the country, quite contemptuous of the mess which the pursuit of half-crowns makes of the places where the people who make the country's wealth are obliged to live. Whether such societies as the recently-formed Newcastle Society and the Durham Society will have any effect, beyond choosing the paint for the lamp-posts, remains to be seen. Certainly it is rather hard on the architect that his work should undergo such degradation.

I have not felt called upon to say anything

Newcastle : Grey-street.

about the recent work which has been done, or of work by living architects. It is here for all eyes to see. I may, however, call attention to the churches which were designed by the late R. J. Johnson, and the late W. Searle Hicks. St. Matthew's, Westgate Hill, All Saints', Gosforth, St. Chad's, Bensham, are examples. They are remarkable for the beauty

of their mouldings, of their traceries, and of any lettering which occurs in them. They are to me very good instances of working in a past style, and yet not seeming to do it "out of a book."

Finally, perhaps, I should mention the sculpture. There is some very fine figure sculpture in the Nine Altars at Durham. In Newcastle Cathedral there is something by Flaxman, and the other monuments there are for the most part in good taste. The organ case is worth a glance. I have mentioned the statue of Charles II at the Guildhall. An equestrian figure of James II used to stand on Sandhill, but it they threw into the Tyne and then fished it up again, and cast bells of it for All Saints. In the civic days of William IV and Victoria the sculptural giant hereabouts was John Graham Lough. A most depressing collection of his plaster is preserved at Elswick Hall—in Elswick Park in Newcastle. It is best not to go. Enough about Lough can be gathered from his statue of George Stephenson with four god-like workmen at his feet, near the station. It is worthy of note that the statue faces east. Evidently the stream of humanity came from the city and went to the station. Now it is the other way about—for your statue should always meet your crowd. Stephenson wants shifting round. Our other statues are good, though perhaps not always placed to the best advantage.

Most of the photographs which accompany this article are from negatives by Mr. William Maitland, of Newcastle. To Mr. Maitland I am indebted for much help in the selection of these.

[For the principal photographs of Durham Cathedral we are indebted to Mr. W. T. Jones F.R.I.B.A., of Durham.]

THE CONFERENCE PROGRAMME.

The arrangements for the Conference are as follow:—

Wednesday, July 8.—Members are the guests of the Northern Architectural Association, and are welcomed by the President of the Association.

Thursday, July 9.—10.15 to 10.30 a.m.: At the Old Assembly Rooms, Westgate-road, 10.15 a.m., the Conference assembles for the inaugural meeting. Members are officially welcomed by the President. Subject: "Architects and the Public." Afternoon.—Alternative Programmes: (A) Trip down the river to Tynemouth Priory, etc. (B) Local visits.

Friday, July 10.—Visit to Durham. 7.1 p.m. for 7.30 p.m., the Conference Banquet in the Old Assembly Rooms, Westgate-road.

Saturday, July 11.—Informal excursions.

Dame Allan's Endowed School, Newcastle.

R. J. JOHNSON, Architect.

New Offices and Warehouse, Westgate-road, Newcastle.

NEWCASTLE: WHAT IT MIGHT BECOME*

A PLEA FOR THE CITY BEAUTIFUL

By J. DOUGLAS MITCHELL.

We should form clearly in our minds the model of what we conceive the City Beautiful should be. No doubt we shall all approach it

turesque to a degree, the central point of the whole picture being the steeple of St. Nicholas Church. Equally picturesque is the view from

Newcastle: Stowell-street Wall.

from slightly differing points of view, but in the effort to form a mental model which we can visualise and look at continually, we shall assuredly be sowing and watering the seeds of civic pride and civic service with their resulting fruit—the betterment of our city for the betterment of all.

When I came north after the war, bearing in my heart a deep love for the ancient city of London, I looked at Newcastle from the point of view of one seeking fresh loyalties and new attachments. I found much to fascinate me, and much to arrest the imagination. I found a city with a past, which carried one back into the times of our earliest history, a past rivalling in historical interest any, and far out-distancing most, of our ancient cities.

Newcastle is a city set upon a hill, and divided from its neighbour by a river with steep, almost mountainous banks. Seen from the top of the high level bridge, it is pic-

* Extracts from a paper read before the Northern Architectural Association. The views expressed in this paper and the plans put forward were based only on the personal opinions of the lecturer, and we are requested to state that they must not be taken as an indication of the opinions of the members of the Newcastle-upon-Tyne Society, which was founded a few months later, and of which the lecturer is hon. secretary.

the river, and Turner selected that aspect for his picture of the city. This view also shows the steeple of St. Nicholas Church as a central feature. This steeple is of amazing beauty, and it is no exaggeration to claim it as one of the wonders of the world. It is a masterpiece of its kind.

Newcastle is also distinguished from other cities by the high costs of rent and of living; it has few main streets—you can number them on one hand. This confines the main shopping area into a very small compass, which is partly the reason for the high rents. I was also struck by the lack of adequate means of communication between the north and south banks of the river. This has since been greatly improved by carrying the trams over the High Level bridge.

Next I noticed what I have not often noticed elsewhere, that slum areas adjoin the leading streets: take, for example, the conjunction of Prudhoe-street and Northumberland-street and all that area immediately behind or north of Eldon-square. Then I noticed the crying need for a town hall worthy of a city with such records, and with such immense latent possibilities; a town hall which would provide the facilities which at present in Newcastle are conspicuous for their absence. I refer to the need for an adequate public hall designed for the purposes of large gatherings, likewise a concert hall for public recitals by the leading vocal and instrumental artists of the day. I noticed also the need for a big modern hotel.

When I looked at the map—and herein I found the main cause of our high rentals—I noticed that Newcastle is like a strong man bound. He is pinned down with a heavy weight upon the small of his back. He is pinned to the river with his head and shoulders at Scotswood and Fenham, his chest at Elswick, the small of his back is the central

Seaton Delaval Hall, Northumberland: West Front.

SIR JOHN VANBRUGH, Architect.

Seaton Delaval Hall, Northumberland: East Front.

SIR JOHN VANBRUGH, Architect.

portion, with his legs and feet at Byker and Walker. What is it that pins him? It is the Town Moor. In Newcastle the open spaces occupy one-fourth of the whole area. In London the open spaces in the three-mile radius are somewhat similar in total area to those of Newcastle. In Paris, the open spaces in the three-mile radius are very much less in area. The great park areas, the Bois de Boulogne and the Bois de Vincennes are both outside the three-mile radius. Yet no one has ever suggested that central Paris is devoid of open spaces. Far from it—the lay-out and design of Central Paris are the envy of the world.

We must note that whereas the three-mile radius includes the whole of Newcastle, it is only the centre of Paris and but a small fraction of the whole of London. Imagine an open space in the centre of London comprising sixteen times the size of the Town Moor, London being sixteen times the size of Newcastle,

What would happen to London rents, London rates, London housing and over-crowding, London traffic and a hundred other problems? London would be crippled by such a handicap, and however beautiful that vast open space might be, London simply could not afford it. Neither can Newcastle afford it. Paris has shown greater wisdom, and has kept her great park areas on the outskirts where land is cheaper.

It is no part of my plan to seek to absorb into the city the whole of the open space of the Town Moor. Very far from it. What I am appealing for is a reconsideration of the ar-

A.—The Blackfriars, Newcastle.

rangements by which the legend "hands off the Town Moor" has become a creed. My suggestion is that by the common consent of all parties the rights which the Freemen have in the moor should be pre-empted and pass back to the Corporation.*

Presuming, as I will venture to do for a few moments, that their consent to pre-emption is obtained, you will ask me: "What do you want to do with the Town Moor?" I will answer briefly: To lay out certain parts of it as football and recreation grounds, certain parts of it as parks, and certain parts of it as the centre of the city's government and administration. This idea in no way would be capable of the criticism "you are destroying the lungs of the city."

The public buildings put on the moor could comprise all or any of the following: (a) The town hall, which, for reasons I will explain later, I propose to refer to in my plan as the capitol; (b) the city library; (c) law courts; (d) university central buildings; (e) art gallery; (f) mansion house.

There is in Newcastle such a chance to form a noble group of public buildings, worthy of the history and achievements of this ancient city, as exists nowhere else in the world today. Cardiff, amongst English and Welsh cities, has probably gone as far as any to express in its public buildings a full measure of civic pride, but I doubt whether Cathays Park, Cardiff, could compare as a site with the Town Moor, Newcastle.

When Washington entrusted the designing of the Federal City of the United States to Major Pierre L'Enfant, a young French engineer, L'Enfant, after looking over the area selected for the city, referred to the hill upon which he placed the capitol as "a natural pedestal awaiting its monument." The same claim may be made for the spot called Race Hill, overlooking the old racecourse. I propose to refer to it as Capitol Hill. Here, then, is the ideal site for the capitol. Here should be erected a building which should be the pride, not merely of Newcastle, nor of Tyne-side, but the pride of the north.

My idea for the lay-out of the Town Moor is that the capitol building should be approached by a wide avenue which would resemble in dimensions the Champs Elysées in Paris. This runs from the junction of Claremont-road and Back Eldon-street direct to the capitol. At the junction of these two streets a round point would be formed, in the centre of which I would place the Earl Grey Monument,

on the direct axis with the capitol building. A further prolongation of this avenue could later be made leading directly on to Barras Bridge. The public buildings would be approached by avenues leading to them from all directions. All these avenues would be of handsome proportions, and flanked by rows of trees. The other public buildings could be designed as a frame to the central block, and could either be in semi-circular formation or in three sides of a square. It will be argued that I am living in the clouds, but what I plead for is the acceptance of a plan for our city which, even if it takes a hundred years to complete, can be kept continually in view and accomplished bit by bit.

I come now to a specific proposal which I hope will meet with a willing response from the hearts of patriotic Tynesiders and North-umbrians. There is in Crowndale-road, behind St. Pancras and King's Cross stations, a working men's college where education of a university standard is provided for the large working-class population of that area. It was started in 1854 with Frederick Denison Maurice as first principal, and associated with him as its early instructors and tutors, who gave their services free in those days, were John Ruskin, Thomas Hughes, author of "Tom Brown's School-days," Charles Kingsley, Burne-Jones, Rossetti and others. Its present principal is General Sir Frederick Maurice, grandson of the first principal, and its aim now, as it was then, is to stretch out the right hand of brotherhood to the workers, seeking in education to find the true way to the solution of the problems of life.

We have here in Newcastle a little group of buildings which I hope may some day be made available for similar purposes as a branch of Armstrong College and a definite feature of the work of our University. I have to thank my friend, Major Harry Barnes, for first discovering these old buildings and their possibilities to me. I have been surprised to find that very few people whom I have asked have known of the existence or the whereabouts of the old buildings in the Friars. If you proceed along Low Friar Street from Newgate-street you will find half-way along to the right-hand side a narrow arch leading to a narrow street called Monk-street. Up this, on the right-hand side, you will come to a little group of buildings which a great many cities in this world would give their souls to possess. Here are the remains of the Black Friars Monastery. These ancient buildings are redolent with history (Illustration A).

The Black Friars acquired a footing here in 1240. In 1334 Edward Balliol of Scotland did homage for the Crown of Scotland to Edward III of England in the church of the Black Friars, Newcastle.

In 1538 the house was suppressed at the dis-

solution of all the smaller religious houses in England.

In 1543 the King granted the Friary to the Mayor and Burgesses of Newcastle for 458 7s. 6d., and an annual payment of 5s. 11d.,

C.—The Area around Friars' College.

reserving to himself, however, the bells and lead of the church and other buildings.

In 1552 the house, with its gardens and orchards, was granted to nine of the ancient trade guilds of Newcastle, and these have retained possession down to the present time.

Had these trade guilds been possessed of endowed funds like the old City guilds of London, one might confidently have appealed to them for the necessary support for the scheme which I am putting before you.

It will probably interest you to be reminded that the old City guilds of London are great leaders in the cause of education. To give you a few instances, I may mention that the Skinners' Company are the founders and governing body of Tonbridge School; the Mercers' Company of St. Paul's School; the Merchant Taylors' Company of Merchant Taylors' School; the Grocers' Company of Oundle, and various others I could mention.

However, the appeal for the necessary funds to carry this project through will need to be made to all patriotic citizens of ancient Northumbria who have at heart the drawing closer together of the classes on the common ground of education.

The plan I suggest is to acquire this group of buildings on lease, thus assuring to the present owners a stable income, and granting to them the use of their guild rooms on such occasions as may be mutually agreed upon. The buildings would be put, at any rate as regards the exterior walls, in a state as nearly approaching the original as possible, and a college hall would be erected on the north side of the cloister. The University is already doing much useful work of the type mentioned, and under this scheme those activities could be developed, and would find a most suitable location in these interesting old buildings.

Drawings illustrating this scheme have been prepared as a labour of love by Mr. Leeson, of Messrs. Knowles, Oliver and Leeson. The ground floor is planned on the assumption that the institution would become a residential working men's college as well as a tutorial establishment. Some of the corbel stones of the cloister roof are still visible, and the replacing of the cloister would greatly help to revive the old spirit of the buildings, as well as providing covered means of access between the different lecture rooms. To carry out the restoration of the buildings and to erect a college hall would cost approximately £15,000. This surely is a means whereby our university may take the lead in this district in that most pressing need of the hour, the breaking down of the walls of suspicion which at present so often divide employer and em-

B.—The Eldon-square Area.

* See page 357 Charlton's "History of Newcastle-upon-Tyne."

played. It is a blot on the fair reputation of Newcastle any longer to leave these ancient buildings in their present mouldering condition.

The slum area north of Eldon-square could be dealt with in the following way:—Pierce either side of Eldon-square by carrying its two flanks right through to the Haymarket, crossing Prudhoe-street. The right flank street, especially when developed with harmonious architecture, would become quickly one of the prosperous streets of the city, from its close proximity to Blakett-street and Northumberland-street. In the open space formed opposite the junction of St. Thomas-street, with Percy-street, an area would be available for the open street Green Market, which at present is held in Newgate-street. Since the carrying of the trams through this street the conditions for the traders in this market have been somewhat congested. The Corporation have in mind the opening up of a site for this purpose in behind Darnbrook. I suggest that a far more spacious site would be available in this scheme. Ample room for the barrows and stalls would be forthcoming without any hindrance to traffic and the extended facilities would no doubt lead to considerably extended trade (Illustration B).

There is a slum area around Stowell-street which needs clearing away. To provide a more direct approach to Friars College, as I will presume to call it, I would propose a street branching out of Fenkle-street near its junction with Low Friar Street, which would lead into the street called The Friars at the point where the old buildings are situated, thus opening up a view of those buildings. The restoration of these buildings, their opening up by

College. This would give access to the main entrance to the College, and would remove what is at present a particularly noisome slum (Illustration C).

I believe that a street of the same dimensions as Grey-street and running roughly on the line of Pudding Chare and High Bridge would ultimately be a very valuable addition to the business portion of the city. This would include the portico of the Theatre Royal as a vista for its northern end; would link Grey-street more closely with the Central station and Grainger-street, and would tend to

E.—The Central Station.

preserve the business balance of the shopping area, which otherwise may tend to spread farther north (Illustration D).

I have often heard it said by business men in London: "What a pity Newcastle has no really first-class hotel." Where could this hotel be most conveniently placed? The existing site I consider too small to make the cost of reconstructing the present hotel remunerative. To buy another site and demolish existing buildings would be too costly. When I looked at the position I was forced to one conclusion. I am an admirer of the magnificent portico of the Central Station, though not so much enamoured of its flanks. I hesitated before concluding that the place for the hotel was on top of the portico and its flanking buildings. The advantages are obvious, no site to purchase, no difficulties of ancient lights, and you have the right site for a station hotel. The disadvantage is also obvious; you might by your treatment spoil an existing fine architectural feature. But it ought to be quite possible to treat it in such a way that a noble effect could be obtained. As regards the elevation, the height of the building would largely depend upon the number of bedrooms required to give the necessary turnover to cover working costs of the building (Illustrations E and F).

When Hadrian spanned the river, he chose the site of the present Swing Bridge as the most convenient spot. To this day no means of crossing the river exists between this spot and the sea. The idea of a bridge which, linked up with the foot of Pilgrim-street, and which would thus become the direct route from south to north, avoiding the congested area in the centre of the city, has been frequently discussed. The City Engineer has issued a report which shows in the most striking way how the carrying of the trams over the High Level Bridge had increased the traffic between the two towns. It also shows the great sum of money which had passed from the citizens to the railway company in the shape of tolls. The Lord Mayor has become keen on this project, and we all hope he will be successful in seeing it begun during his term of office. With the necessary viaducts and bridge approaches which would be required on both sides of the

river, unique opportunities for architectural treatment would be provided.

To those who tell me that town improvements are very costly, I would say: Look what you can do by planting a few trees. Most people will agree that the new war memorial at Barras Bridge is a beautiful one. To me it represents a very fine picture, finely hung but lacking a frame. If you examine it in front from the far side of the road you find it has an indefinite background of roofs thinly veiled by a few scattered trees. I would propose a semi-circular frame of cypress trees.

No scheme for a city beautiful can be complete without some reference to the subject of smoke abatement. Recently Sir Aston Webb stated that London could never be the city it deserved to be until the smoke was got rid of. He would encourage the manufacture of smokeless fuel until it was cheaper than soft bituminous coal and forbid the use of the latter in large cities. It certainly does seem high time that some step forward in this direction should be taken. America has shown that it is possible successfully to combat the problem, for example in New York, and a still more striking instance, Pittsburg.

The atmosphere of beauty in surroundings must have an effect upon character. Raise the tone of recreational facilities and you lower the drink bill and the assize list. This is the proved experience of social workers. Well designed and well run cinema halls have great possibilities in this direction. The provision of spacious, well-lighted dance halls, where simple refreshments could be obtained would be all to the good. In this connection we must not forget to welcome the movement for the establishment of repertory theatres. Since the splendid work of Grainger town planning has become a somewhat neglected art in Newcastle.

It does seem that the present time is propitious for a new step forward, and if the endeavour to form a civic society, the object of which will be the practical improvement and the artistic development of Newcastle, should bear fruit, a big step forward will have been taken. Since I had the privilege of proposing at the Rotary Club that a similar society with similar aims should be formed in Newcastle, steps have been taken to explore the possibilities of forming such a society, and I hope they will bear fruit in the near future.

With such a society in Newcastle, widely

D.—Suggested Street Improvement in Business Quarter.

means of such a street, and the general improvement in surrounding property which would inevitably follow, would be a long step towards the transformation of this slum area.

A street is also proposed running between Low Friar-street and Stowell-street, and opening up the area immediately north of Friars

F.—Suggested Hotel over Central Station.

supported by large numbers of intelligent citizens, the city authorities would always be assured of support in development schemes along well considered lines. It would also provide the necessary safeguard against any hasty or ill-considered action in the matter of dealing with open spaces

Eastbourne College War Memorial Building.

MESSES. SYDNEY TACHELL & GEOFFREY C. WILSON, F.F.R.I.B.A., Architects.

MR. RAMSAY MACDONALD ON ARCHITECTURE

THE past few days have been eventful ones for Liverpool. The first happening of importance is the renewed success of Liverpool University School of Architecture, Professor Reilly's students having again carried off not only the Prix de Rome but also the Henry Jarvis Scholarship. We congratulate the school on its success. Mr. G. A. Butling, a fourth-year student, has won the Prix de Rome, and Mr. C. A. Minoprio, a fifth-year student, the Jarvis. The Prix de Rome has now been won by Liverpool four times out of a possible seven. The second interesting event was the conferring of honorary degrees of the University upon three distinguished architects, two of them Americans—Mr. Thomas Hastings, Mr. Harvey W. Corbett, and Professor Stanley D. Adshear. The third event was a memorable speech by the ex-Prime Minister, Mr. J. Ramsay MacDonald, given on Saturday last at the opening of the annual exhibition of drawings by students of Liverpool University at the Walker Art Gallery.

Mr. MacDonald, in opening the exhibition, said that the fame of the Liverpool School had gone far before it. Something would be heard, possibly at the beginning of the ensuing week, which would give them still greater pride in its work and cause for self-congratulation at having Professor Reilly as its presiding genius. Though he could claim no expert learning, and was sure he could not with anything like certainty tell the characteristics of one school of architecture from another, the speaker said he had a claim which they would consider to be a good one—he came as the representative of that section of democracy which hungered and thirsted after spiritual peace and beauty.

Architecture, he supposed, unless they expected music, was the first of all the arts. If architecture was merely meant to provide a shelter for the body of man, then the cheaper and uglier it was, perhaps, the more efficient it would be. But if it was not merely man's body that required a habitation, but man's mind and soul, the architect who simply provided a shelter was not doing his duty. The man who approached his house was not merely a physically shivering creature in the wind and rain, but an unhappy man aspiring for that content which came from beauty, that life which came from chastity of form and circumstance; and until the architect provided that, as well as the physical shelter, he was not performing his whole duty.

"The training of the architect," continued Mr. MacDonald, "is not merely in compasses, in stresses and strains, and in the knowledge of the composition and price of bricks and how to deal with dry-rot—I speak from sad and sorrowful experience—it must be a training in how to grasp the large life and spirit of art. Whether the architect is conceiving the plans of a tiny house that will be a home or a great cathedral, such as I have seen to-day, whether his creation is to be small or large in bulk, we want the man whose creation will reveal to us that glorious winged figure that resides in our own heart and whispers to us thoughts, aspirations, and feelings of the absolutely beautiful. It is not bulk, but spirit; and here the school comes in as opposed to the old-fashioned method of pupillage.

"You cannot produce the architects that the next, or even this, generation will want by merely putting them into architects' offices. You must give them the spirit of the great artist. They are brothers with our painters, poets, and dramatists. No man can build a house for a man unless he understands man. No man can understand man unless he understands him in his absolute completeness in divine perfection. The true architect must be an artist, and to be an artist one must go to a school of architecture modelled like yours. Though the idea expressed by the architect must have its appropriate material, the success of the architect in the end is to hide his material in his idea so that when you approach

the house, the church, or the cathedral the spirit alone is seen and not the material. The artist, whether he works in words, in pigments, or in the solid substances of the sculptor and the architect, reaches his triumphant point of mastery when the material is lost and the form and the spirit alone remain. In order to do that the architect must instinctively feel the unity which he is trying to realise."

Turning to the architectural forms created by the spirit of religion, Mr. MacDonald cited two examples which, he said, were as divorced from each other as Liverpool was from old Sarum. The first, Westminster Abbey, was designed, with all its intricate and elaborate Gothicism, its cross-lights, its shadows and glooms, its brilliant points and its blurs, its heights and its lengths—all designed for a Gothic ritual. "You enter," continued Mr. MacDonald, "and you become a participant at once in the Gothic ritual. You feel that you have donned the robes of those choristers, those priests and bishops, and as you tread the aisles you walk with precisely the step that they must walk in, not because their fathers did it before them, but because no other step is possible in such circumstances."

The other building, said Mr. MacDonald, was that simple, white-washed little place where the Quakers had met for generations—Jordans, at the foot of its gentle, green slope with the little graveyard at its side, where William Penn and others lay buried. As perfect in its appeal, as completely fashioned, as Westminster Abbey!

There one found no ritual, no elaboration. One sprang into the Presence right away. Men entered it with empty hands and with hearts stripped of all pride, pomp, and ceremony. Different, absolutely diverse as they might be, they both made the heart sing for gladness, or hum quietly on account of perfect satisfaction. That was the triumph of art; that was the joy of the architect.

In former days the pupil was taught to be a good workman, but the student of to-day was taught to be a good craftsman, and the difference between the two was world-wide. There was a story told of someone who found two workmen hewing two stones in a quarry. In response to his questions, one of the men said: "I am hewing a stone"; but the other's reply was: "I am building a cathedral." Therein lay the difference. Limit the conception of utility, and there was produced a mechanically-minded man from whom one had no right to expect a response to a fine high communal appeal. It was the difference between the mere mechanical workman who worked his allotted time and took his allotted wages, and the creator, the craftsman who put his heart and life into his work. Generations after generations would never see the two products side by side without being able to distinguish that there was death in the one and life in the other.

It was a profound mistake for architects to imagine that when they were engaged in the production of small domestic architecture they had not the same chances as when planning a great town hall or public building. It was a mistake, more particularly just now, because of what was happening. There was no such thing as an individual house—neither they nor he ever saw it, and no one ever would. If the individual house were put on a plain, they saw it in its relation to the plain; or if in the wilderness, in its relation to the wilderness, and so with the individual house in the street or village. The future of domestic architecture must belong to town planning—and there the community came in. Whatever they built or designed had its setting, and now, by the growth of community conception, the problem of the architect in domestic work was not to put nice little decorations on a nice little house where nice little people might dwell, rear nice little children, play nice little pianos, and sing nice little songs. That was no longer the con-

ception of domestic architecture. The true conception consisted in embodying the communal spirit. The time would come when, in order that our architects might know their business, the public would give them sufficient response, when knowing the right thing when it saw it would encourage the architect to produce what the speaker had in mind. They would then cross the threshold not of their streets and houses, but of their villages and settlements, and feel precisely what they felt when they crossed the threshold of Westminster, or Jordans, or Liverpool Cathedral, or any of the other accepted and acceptable manifestations of the soul of worship combined with the soul of beauty. That was the next great achievement which our architects had to accomplish.

Though man could not live by bread alone, or without it, there was a subtle, mystic satisfaction in being surrounded by beauty and in being able, as it were, to nestle down into their surroundings and circumstances, and say, "I am happy." That was the peace, not of slumber or of negation, which was evil and came from the devil, but of life—the peace that stilled storms and disturbances—and if mankind was ever to reach it the architect would be the major contributor, for it was his power and privilege to give us good surroundings.

CORRESPONDENCE.

(Continued from page 46.)

Eccentric Loads upon Pillars.

SIR,—Referring to my letter in your issue of the 3rd instant, my calculations were for the worst cases, where the girder is not cleated to the stanchion. When it is so cleated, the line of eccentric stress would coincide with the face to which it is cleated. The following figures show the percentages to be added under W. for a web stress and under F for a flange stress, for steel joists most in use as stanchions, whose sizes are under S.

S.	S.	W.	F.
10 in. × 8 in.	..	34	.. 150
9 in. × 7 in.	..	32	.. 153
8 in. × 6 in.	..	34	.. 148
6 in. × 5 in.	..	40	.. 153

GEORGE H. BLAGROVE.

SIR,—In reply to Mr. Blagrove's letter, it is perhaps well that the L.C.C. does not prescribe rules for computing the stresses set up by eccentric loading of pillars, but leaves the matter to the discretion of designers. Pure eccentric loading to which the usual formula applies is seldom met with, there being often forces which tend to reduce the stresses set by eccentric loading. The subject of pillars is not particularly clear at the present time, and there is room for much research in the matter.

THEORY OF ARCHITECTURE.

'Beauty lives with kindness.'

—Two Gentlemen of Verona.

ANOTHER time, having lent him Venturi's *History of Italian Art* (Vol. III), on its being returned I found many little slips between the pages with pencilled remarks showing how he had studied the book. "Fig. 11: It seems that *anything* could be done in this style; see also 80. Fig. 35: First true view of this central steeple I've seen. To me 'tis the most ekilful composition of its kind—anywhere. Fig. 72: Ah! Fig. 94: One can hardly understand what has gone to make such a thing as this, perfect in its way. Fig. 95 is a one-er for mysticism. Fig. 110: Is this a solemn piece of work for a saint bishop? Fig. 127: What a figure! Fig. 482: Such a Sicilian perfection with its balance of parts and with next to no overlay; what a refined effort; even Peterborough almost pales. Fig. 485: Inspiration. Fig. 521: Ain't these Joseph carvings out and out dramatical? Fig. 602: Aren't these Gaeta things touching? Fig 640: These Benevento doors in detail were new to me, and the subject reliefs beautiful beyond telling. Figs. 770 and 771: !!! Fig. 803: Think over these. Figs. 821 and 822: O my! Sound Materials.—We owe it to England and the landscape to build in a reverent way with suitable materials. Materials must be used so as to express their essential qualities; these essential qualities are what rhythm is to poetry. This applies as well to decoration as to structure. "Of course the gist of all decorative design is in its hand and glove fitness for the material reception. The very invention depending on facility and adeptness in doing."

Land Love.—The root of architecture is in the land, and without love of the land you can do nothing. Morris and Webb beyond any other men I have known, and apart from most, had a deep religious love for England, not a vague abstract love, or possessive pride and patriotism, but affection and even worship for the very earth, trees, fields, animals, ploughs, wagons and buildings—yes, and the weather, too; 'there is no bad weather, only different kinds of good weather.' The love was particular and personal—this field, this bend of the river, that building and that. The land was not merely 'nature,' it was the land which

had been laboured over by the generations of men; buildings were not 'architecture,' they were built history and poetry. Art was not 'taste' but human spirit made visible. As Morris said, 'To criticise Chartres Cathedral is like criticising a geological epoch.' Then there early came a time when they realised that this England of their love was a little land, that its treasure of ancient buildings was limited, that change and destruction were going forward with frightening rapidity and that it could not stand the racket. I remember Webb saying, "Nature would soon cover up the scars, but I can't think the land will ever be grey with old buildings again."

The intensity of Morris's worship of the earth and what it holds is expressed in his description of the old house in 'Nowhere.' 'O me! O me! How I love the earth, and the seasons, and weather, and all things that deal with it, and all that grows out of it, as this has done!' 'The earth and the growth of it and the life of it! If I could but say it or show how I love it! Passionate acceptance of the fellowship of men; the sacredness of labour, and worship of the earth were items in the belief of these men.

The waking up to a conscious response to Nature and to historical associations and survivals seems to have come about at the end of the eighteenth century—it was probably enough a manifestation of a protective instinct mysteriously aware of what was to happen in the coming machine age. Wordsworth seems first to have seen things in the new way.

Locality and Site.—Webb would most carefully relate his building to its neighbourhood, both in adjusting it to the site and in taking up local manners of building. These were among the sources of his inspiration and I get the impression from his country houses that it 'came to him' what sort of thing he wished to build on a particular site and in its neighbourhood. This idea was worked out in the office, but the inspiration was always local. He felt the loss of local custom and endeavour and agreed with Morris when telling of some new iron bridge atrocity near Kelmscott one evening at the Society for the Protection of Ancient Buildings: 'There's hardly a man left in England who dares build a ten-foot bridge over a brook: an engineer is called from London to plank down iron girders.'

The compelling need to use local material is brought out in a letter to Miss Constance Astley, of Arisaig, N.B., November 29, 1882: "... If you should fail in getting whin stone of sufficient size to do the memorial from

stone got from your own ground, it would seem hardly to the purpose to get that sort of stone from elsewhere—unless it could be got from somewhere near by. Still, I think, in that rude little churchyard, with its ancient ruin standing by, the native stone would look more congruous than any imported stone would; but if the whin stone is not to be come at I think unpolished granite would be the next best though in that case I should have to make a fresh design as the design you have is quite unsuited to the working of granite."

Beyond the general influence of neighbourhood come the particular suggestions of an actual site. This has been dwelt on in the account of Webb's buildings, and I will here only add a passage from a letter of December 21, 1909: "... Do urge on the need for mastering the *possibility* of a site."

Purpose and Humanity.—Expression of essential quality was also much in his mind. It is a commonplace that buildings should have individual character according to their purpose, but Webb's quality went beyond this. His houses embody houseiness; they are homes. All our words are so worn that I must not speak of 'art' or 'poetry,' but perhaps what is meant may be suggested by heartiness, honesty, and humanity—Webb's architecture was Humanity in Building.

The special quality in his work as from the heart of the man. He felt that roofs, chimneys and walls were sacred. When he designed Morris's coped gravestone he said: "I will be a roof for the old man." Once speaking of a too elegantly designed grate and chimney-piece, he said: "Yes, but it is hardly fit for Holy fire." It was the heart in things made which called to him. On a time returning to London he spoke of how the country touched him "with the old houses like open books lying in the fields."

Directness.—Yet another of Webb's thoughts to which he would frequently recur was that all the greatest art preserved some strand of primitive frankness and an element of wonder.

To W. R. L., September 17, 1903: "True the Gothic between 1200 and 1350 was not 'barbaric,' or rather had not the barbaric element left in it, but between 1150 and 1200 the youthful freshness and strength of what I've called barbaric is there; and the very spring in the later more refined chevron decoration is to me a visible sign that 'barbarism' was only partly outgrown and its strength-giving quality backboned the work of the next two centuries. Still how difficult such questions, in their real answering, are! There was heavy-browed 'wonder' built into cathedrals before the wriggings of the 'great worm' had straightened out; and wonder *is*, I feel, an essential of Gothic. Indeed, I'm claiming it should be a primary essential; and only by the Gothic system of multiplication and disposition of parts can 'wonder' be gained (and even in comparatively small buildings, more subtly than in the larger, for these depend on actual size). Do you know the great central doorway under the narthex of the Madeleine at Vezelay? Rooke père sent a picture postcard of it. 'Tis an astounding piece of structural and sculptured work, and by good luck not tampered with by the Viollet [le Duc]. I think the sculpture could not be later than the end of the eleventh century; in any case it is barbarically powerful."

"The glut of big things you saw in this round of French delights must have filled you up, however greedy your swallow. I, too, am touched by the eastern apse of St. Quentin—may we call that 'reasonable selection'? Through the lens it looks as if there was fine glass in this apse? The builders were much in love with bows: the main apse, then the ambulatory colonnade, finished with the chape bows—looking on plan like rose petals—must be astonishingly effective inside. Do not the things in Villars de Honnecourt's book look later than the eastern (apsidal) limb of this church? You must know; I've never seen either of the great soul-filling buildings in this French catalogue of yours—not even Soissons of which I remember something of delight in

(Continued on p. 77.)

FIG. 2.—BRAMPTON CHURCH, CUMBERLAND.

letter of W. M.'s about it when he went with Fenny. True, Solomon was never much more in his glory anywhere than at Rheims. He [the image] do 'swagger' with that left arm of his, and there is much 'side' on the right. . . .

To W. R. L., 1903: "That was a heaven-sent chance (the scaffolding at Wells). You see, 'Heaven helps those who help themselves.' . . . For years back my brain has worked at the 'essentials' of 'Gothic,' and in rummaging amongst architectural history books of building have more or less concluded that all architectures had in some stage of them the "Gothic" element—that is, the barbaric; which led the builders to express themselves—and probably when at their best—in direct effectiveness, before consciousness of attractive detail. I have seen it in the Greek, strongly before the Parthenon time—so-called archaic; noted it in the early rock-cut temples of India, with pure Buddhist sculptures; also in the earlyish Byzantine work, where the barbaric element again set architecture on its legs. The question to me, then, has been: how far can detail (ornament, structural or otherwise) be carried without losing the massive, direct, and simple qualities of the 'barbaric' saving element of breadth? I take it the answer would be that you may overlay simplicity with some gain, and without loss of the addition be not too mechanical—the work of slaves. We have not yet told ourselves how much addition of slave work expression there is, say, in the Parthenon or in fourteenth-century French cathedrals, or in our own fifteenth century ditto."

"J. R. once held ('Seven Lamps'?) that a building wasn't architecture without sculpture and painting—to me a fallacy, on the line of Ferguson. What could have been added to the original N. and S. transept ends of St. Alban's without injury? It seems that all depends on what the ornament is. The early folks painted their surfaces and the Egyptians carved in very flat relief, without destroying the breadth of simplicity. Byzantines marbled their surfaces and incised patterns in spandrels. Some literature, too, will carry adjectives without loss of force. To me the whole matter—rightly done—merely means a difference in kind. The incrustation on Wells west front

is broad and simple—only of a different kind to St. Alban's transept. The Italian Lombardic constructional decoration with spandril inlay, etc., like the fronts of the Cathedral at Lucca, do not to my eye destroy the underlying 'barbaric' simplicity of form or surface. Detail, to me, means the sign manual of instinct and imagination, applied only when called for by the object. Here I say a word for that of 'barbaric' (which Wardle would have at no price); it is not barbarous, but is the beginning of throwing off fetters on the impulse of imagination, and is not licentious as the satiety of the unrestrained is but rather the shyness of simplicity in growth. The licence shown in our poor late 'Decorated' and in much of fourteenth-century French and German work is dull, mechanical, unimaginative. Our almost unique 'perpendicular' has in it often revival of imagination which makes it peculiarly interesting and inimitable; having withal breadth. J. R., in an early lecture, produced a drawing of barbarous inexpression, adding that nothing of worth could come out of it.*

I remember dissenting, believing that the progress in the arts had grown from some such stocks. The 'Decline and Fall' gave the new life-spring in Byzantium. Possibly the submerging of commerce and general purification of England from luxury might give fresh inspiration to art with us—and the curse of the great Parjandrum may turn out to have been a blessing disguised in shoddy. One can never say when the inventive frog-nation will cease to be the ingenious people of Europe—such vitality is there in that stock. Still, could these French ever forego their lead of other nationalities, and allow Paris to become *le barbare*? Are they not more likely to clap on steam to a 'Gothic revival'—somewhat after the style of Wagnerian music, or as mighty fox-hunters have done to clear too wide a stream, and come down with a splash?"

[This Part will be concluded in our next issue.]

FIG. 3.—BRAMPTON CHURCH, CUMBERLAND.

LONDON UNIVERSITY SCHOOL OF ARCHITECTURE AND ATELIER

By H. P. CART DE LAFONTAINE, A.R.I.B.A.

THE exhibition of the work of students in the School of Architecture and the Atelier of the University of London, which took place at the University during last week, showed that excellent progress is still being made by students under the guidance of Professor Richardson and Mr. Corfiato.

The work shown is good in two respects; in the first place the choice of subjects set for study both in the School and in the Atelier is sufficiently varied to stimulate the imagination of students, and, secondly, because the importance of a good plan is evidently realised.

One saw examples of each year, starting with the elementary work of the first and second years and becoming increasingly interesting in the third and fourth years, when the students' knowledge of architectural composition is most advanced, and in this final year's work I noticed that the same programmes are sometimes given in the School and in the Atelier, but I understand that extra time is allowed in the former case.

The subject of a block of flats on an island site in Bloomsbury was, I think, the most interesting, and has produced several quite up-to-date and practical solutions; one noticed that in a good many cases the mistake had been made of placing bedrooms on the street fronts, where the noise of traffic would be rather a disadvantage, but questions of direct lighting from large courts instead of small areas, the shapes of rooms, and the convenient planning of stairs, lifts and service arrangements have received attention.

In most cases the elevations were rather exotic, and in others the proportions of window openings and between voids and solids had not received quite sufficient consideration, but it was certainly refreshing to see the importance of good planning is at last coming to be realised in a British architectural school.

One also noticed some excellent prize drawings amongst the work of students of the Atelier, including drawings for the Victory Scholarship, the Tite Prize, and the Lever Prize, whilst in an adjoining room were some well-thought-out town-planning studies based on actual areas, and in most cases shown in various colours on large scale Ordnance maps; here one had the impression of business-like thoroughness as was to be expected under the firm hand of Professor Adshead, who is a recognised master of his subject.

My general impression is that the work of students for the most part shows a considerable advance, and has more character and personality than might be expected. The thoroughly worked-out designs for a small factory in reinforced concrete show also that attention is given to the economical solution of problems of construction which constantly confront the modern architect. But one noticed that there are tares even in this excellent harvest, and one trusts that students who have not real ability or sufficient enthusiasm to burn the midnight oil when necessary will be prevented from entering a profession where there is only room for the man who has natural ability as a designer, and who is not afraid of hard work and disappointments.

THE BUILDING TRADE.

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—X

REMEDIES.

IN the previous articles we have considered in general terms the prescriptive right to light, how it can be acquired and how it may be lost, and what degree of obstruction must be proved to constitute an actionable wrong; but now we come to a point no less important, which is the form of the remedy for an actionable interference with the access of light.

Where a nuisance has been committed, there is one method of dealing with it—which is for the party aggrieved to abate it himself.

That is a form of remedy which we do not propose dealing with in these articles. From the nature of the easement of light it is obvious that to abate the nuisance an entry on the land of the other party is essential. That is, what would be a trespass must be committed were it not justified by the act of abatement. It is also equally clear that this form of remedy cannot be resorted to in the case of serious obstruction where a building has been erected or is even in course of erection, and that practically it must be confined to cases where a temporary obstruction has been erected either to prevent the right of light from being acquired or to test the existence of the right. As an obstruction to light cannot be abated without entry on the land of another, where such a course is adopted it falls within the category of cases where notice should be given either calling upon the person to remove the obstruction or of the intention of the party aggrieved to do so (see *Lemmon v. Webb*, 1895 A.C.1).

There must always be some risk where a party, so to speak, takes the law into his own hands. For instance, there are the rights of possible third parties to be considered, and such a course is certainly not calculated to engender good feeling between the parties; and unless it is very urgent that the obstruction should be removed without delay, recourse to abatement is hardly to be recommended even where the obstruction is merely of a temporary character. There may, however, be cases, as we pointed out in our fourth article, where immediate action is essential.

The legal remedies for an infringement of the right to light are an injunction, or damages, or both damages and an injunction, and speedy action there is the interim injunction also. In the Courts of Common Law the only remedy was by way of damages, whilst injunctions were granted by the Courts of Equity. In the Courts of Common Law, however, damages were given only in respect of a cause of action which had accrued at the date of the commencement of the action, and no damages could be recovered for injury which was merely threatened although the damages might include compensation for consequences of the injury already committed which it was proved would occur in the future. (See per Lord Findlay in *Leeds Industrial Co-operative Society, Ltd., v. Slack*, 1924, A.C. 851; *The Builder*, January 2, 1925.)

In 1858 an Act, 21 and 22 Vic. c. 27, known as Lord Cairns' Act, was passed, section 2 of which provided that in all cases in which the Court of Chancery had jurisdiction to entertain an injunction against . . . the commission or continuance of any wrongful act . . . it should be lawful for the same Court if it should think fit to award damages to the party injured either in addition to or in substitution for such injunction . . . and such damages might be assessed in such manner as the Court might direct.

The Judicature Act, 1873, practically fused the jurisdiction of the Courts of Chancery and the Courts of Queen's Bench into one court, "the High Court," and they were thereafter known as "Divisions of the High Court," so the

material distinctions between the jurisdiction of the Courts of Common Law and the Courts of Equity were removed, although, as we shall show below, it was only last year that it was finally settled that damages could be awarded in lieu of an injunction where the obstruction to light was only threatened. In cases where immediate legal intervention is necessary an interim or interlocutory injunction may be applied for. Such an injunction does not determine the rights of the parties; it is granted on a *prima facie* case being shown, and is entirely in the discretion of the Court.

Injunctions may be perpetual, and whether merely interim or perpetual may take the form not only of being prohibitive, but also mandatory; that is, they may take the form of an order to remove the whole or part of the obstruction. An example of an interim mandatory injunction will be found in the case *Von Joel v. Hornsey* (1895, 2 Ch. 774). In that case the defendant was erecting a building near the plaintiff's house. The plaintiff had warned the defendant that if the building was continued he would take proceedings to restrain it as infringing his right to ancient lights. Subsequently he issued the writ in an action, but the defendant evaded service and continued the building until substituted service had been effected upon him. In these circumstances the Court, without inquiring into the merits of the case, granted a mandatory injunction, ordering the defendant to pull down so much of the building as had been erected after the plaintiff had warned him that he intended to take proceedings. This case followed *Daniel v. Fergusson* (1891, 2 Ch. 27), where the defendant had continued and hurried on with the building after the service of the writ. Both these decisions were given in the Court of Appeal. When an interim injunction is granted it is the practice for the Court to require the plaintiff to give an undertaking as to damages if it is afterwards established at the trial that the plaintiff has no claim, and an inquiry as to these damages may be directed, although the plaintiff has been guilty of no misrepresentation, suppression or other default in obtaining the interim injunction (*Griffith v. Blake*, 1884, 27 Ch. Div. 474). In *Smith v. Day* (1882, 13 Ch. Div. 651) *Jessel M.R.*, had questioned whether such an inquiry should be directed where the interim injunction had been granted owing to a mistake in law by the Judge, but the Court of Appeal in *Griffith v. Blake* dissented from this dictum.

The onus, of course, is laid upon the party applying for an interim injunction, and the Court, in exercising its discretion, will consider the balance of convenience involved in granting the injunction or in allowing the defendants to continue their building operations (*Newson v. Pender*, 1884, 27 Ch. Div. 48). Passing from interim injunctions, the next question is, on what principle the Courts will grant either damages or an injunction, or both, and when a mandatory injunction will be granted.

Some of these questions were considered in *Colls v. Home & Colonial Stores* (1904, A.C. 179), and it may be well first to consider what was said on this subject in that case. Lord Macnaghten is reported as having said, "Then in regard to giving damages in addition to or substitution for an injunction—that, no doubt, is a delicate matter. It is a matter for the discretion of the Court, and the discretion is a judicial discretion. It has been said that an injunction ought to be granted when substantial damages would be given at law; I have some difficulty in following out this rule. I observe that in some cases juries have been directed to give one shilling damages as a notice to the defendant to remove the obstruction complained of, and

then, if the obstruction was not removed, in a subsequent action, the damages were largely increased. In others, a substantial sum has been awarded, to be reduced to nominal damages on the removal of the obstruction. But the recovery of damages whatever the amount may be, indicates a violation of right and in former times, unless there was something special in the case, would have entitled the plaintiff, as of course, to an injunction in equity. I rather doubt whether the amount of damages which may be supposed to be recoverable at law affords a satisfactory test. In some cases, of course, an injunction is necessary; if, for instance, the injury cannot fairly be compensated by money; if the defendant has acted in a high-handed manner; if he has endeavoured to steal a march upon the plaintiff, or to evade the jurisdiction of the Court. In all these cases an injunction is necessary in order to do justice to the plaintiff and as a warning to others. But if there really is a question as to whether the obstruction is legal or not, and if the defendant has acted fairly and in a neighbourly manner, I am inclined to think that the Court ought to incline to damages rather than to an injunction. It is quite true that a man ought not to be compelled to part with his property against his will without an Act of Parliament; on the other hand, the Court ought to be very careful not to allow an action for the protection of ancient lights to be used as a means for extorting money. Often a person who is engaged in a large building scheme has to pay money right and left in order to avoid litigation which will put him to even greater expense by delaying his proceedings. As far as my own experience goes, there is quite as much oppression on the part of those who invoke the assistance of the Court to protect some ancient lights which they have never before considered of any great value, as there is on the part of those who are improving the neighbourhood by the erection of buildings which must necessarily to some extent interfere with the light of adjoining premises."

It is to be observed that Lord Macnaghten, in making the above observations, expressly stated that they were only practical suggestions and were not put forward with authority, but they are suggestions which must receive great consideration, coming from such a source, and they are particularly important under existing conditions, when it is desirable that building operations should be encouraged and not be unnecessarily fettered.

In our ninth article we ventured to suggest that the decision in *Colls' case* has, in fact, tended to lessen litigation and do away with unnecessary fine points.

Lord Findlay, in *Colls' case*, held very strongly that, even if the plaintiffs in that case had any cause of action, the damages which could be awarded would be very small, and it certainly was not a case for a mandatory injunction. He further pointed out that the doctrine that where a legal right is continuously infringed, an injunction to protect it ought to be granted, is subject to qualification. In support of the first proposition that the smallness of the damage might make the granting of an injunction oppressive, he cited *Curriers Company v. Corbet* (1865, 2 Drew & Sm. 355); *Robson v. Whittingham* (1866, 1 Ch. App. 442); and *National Provincial Plate Glass Insurance Co. v. Prudential Assurance Co.* (1877, 6 Ch. Div. 757); and in support of the second proposition that, even where the injury is continuing, an injunction need not necessarily be granted, he cited *Aynsley v. Glover* (1847, L.R. 18, Eq. 544) and *Shelfer v. City of London Electric Lighting Co.* (1895, 2 Ch. 388).

These observations must be taken as only preliminary remarks on the question of remedies as in the next article we propose more closely to consider the principles upon which an injunction or a mandatory injunction will be granted.

NEW BUILDINGS IN LONDON

Barking.—A housing scheme of about 50 houses is to be carried out in Netherfield-road, Barking, by Mr. Charles Gray, Cecil Gardens Estate Office, 11, Salisbury-avenue, Barking.

Becontree.—Nine shops with two stories of flats above are included in the plans for the development of the site at the corner of Bennett's Castle-lane and Green-lane, Becontree. The contractors are Messrs. T. N. Hughes, Ltd., Clements-road, Ilford. Mr. H. Meredith, A.R.I.B.A., 7, Goodmayes-road, Goodmayes, Essex, is the architect.

Billiter-street.—A new block of modern offices is to be erected at 18, Billiter-street, E.C.3. The contractors are Messrs. F. G. Minter, Ltd., Ferry Works, Putney, S.W., and the architects Messrs. Gunton & Gunton, F.R.I.B.A., Finsbury House, Blomfield-street, E.C.2.

Bishopsgate.—It is proposed to make an early start on the £100,000 block of office premises to be erected on the west side of St. Helen's-place, E.C.3. Plans have been prepared for the ground landlords, the Leathersellers' Company, by Mr. Henry A. Saul, F.R.I.B.A., 10, Gray's Inn-square, W.C.1.

Bishopsgate.—Foundations are now being constructed for the new offices in Bishopsgate, E.C.3, for the Hudson's Bay Co., Ltd. The general contractors are Messrs. Dove Bros., Ltd., Cloudesley-place, N.1, the steelwork is by Messrs. Dorman, Long & Co., Ltd., 4, Central Buildings, S.W.1, and the granite by Messrs. H. T. Jenkins & Sons, 132, Union-street, Torquay. The architects are Messrs. Lewis & Davis, 22, Conduit-street, W.1.

Bushey.—Extensions are to be carried out at the Royal Caledonian School at Bushey. Mr. Francis W. Troup, 14, Gray's Inn-square, W.C.1, is the architect.

Catford.—At Southend Village, Catford, S.E.16, a new church to seat 800 is to be built of brick with stone dressings. Sir Charles Nicholson, Bart., 2, New-square, Lincoln's Inn, W.C.2, is the architect.

Chelsea.—Messrs. Lole & Co., Trafalgar-square, Chelsea, S.W.3, are building new wards, operating theatre, &c., at the Cheyne Hospital for Children, at Cheyne-walk, S.W.3. The work is estimated at £6,000. The architect is Mr. R. M. Pigott, A.R.I.B.A., 35, Bedford-row, W.C.1.

Croydon.—A new bakehouse and stores are to be added to the premises of Messrs. Alfred French, Ltd., bakers, at 97, George-street, Croydon. The builder will be Mr. H. T. Blandford, 75a, George-street, Croydon.

Ebury-street.—The foundations are now being constructed for the new wing of the Goring Hotel, in Ebury-street, S.W.1, to the plans of Messrs. Giles, Gough & Trollope, 28, Craven-street, W.C.2. The contractors are Messrs. Dove Bros., Ltd., Cloudesley-place, Islington, N.1.

Edgware-road.—The site at 45, 47 and 49, Edgware-road, W.2, has been purchased by Messrs. J. H. Kenyon, Ltd., Edgware-road, W.2, who propose to erect a block of offices with several floors of flats above. Messrs. George A. Lansdown & Brown, 9, Regent-street, W.1, have prepared plans.

Ennismore-gardens.—No. 35, Ennismore-gardens, S.W.1, is to be converted into a number of self-contained flats. Messrs. Welshman & Wise, 38, Ennismore-gardens, S.W., are the architects.

Euston-road.—A new building for the Elizabeth Garrett Anderson Hospital for Women is to be erected in Euston-road, N.W.1. The cost is estimated at about £100,000. The hon. architect is Sir Brumwell Thomas, F3, The Albany, Piccadilly, W.1.

Gray's Inn-road.—A further section of the rebuilding scheme of the Central London Throat, Nose and Ear Hospital in Gray's Inn-road, W.C.1, is shortly to be put in hand, at a cost of £35,000. The architects are Messrs. Young & Hall, 17, Southampton-street, W.C.

Houndsditch.—Messrs. S. Lesser & Sons, Ltd., merchants, intend to rebuild their business

premises at 25-27, Houndsditch, E.C.3. The architects are Messrs. Lewis Solomon & Son, 133, Moorgate, E.C.2.

Kensington.—A block of flats, with shops on the ground floor, extending to six stories, is to be erected on the site of 26-28, Church-street, W.8. The builders and owners are Messrs. N. A. Cooper & Co., 47, Earls Court-road, W.8.

Kingston.—Plans have been prepared by Messrs. Yetts, Sturdy & Usher, 115, Moorgate, E.C.2, on the instructions of Messrs. Hodgson's, Kingston Brewery, Ltd., Kingston-on-Thames, for a new public-house on a site on the west side of Villiers-road and Grove-lane, Kingston.

Lewisham.—A new nurses' home at the Lewisham Infirmary, S.E., is shortly to be erected at a cost of £159,892, and Messrs. Leslie & Co., Ltd., Kensington-square, W.8, are the contractors. The architects are Messrs. J. Douglass Mathews, Son, & Ridley, 3, Paul's Bakehouse-court, E.C.4.

Loughborough Junction.—The Salvation Army are considering the question of building a new hall to accommodate 400 persons in Wanless-road, Loughborough Junction, S.E. Plans have been prepared by Mr. Oswald Archer, 101, Queen Victoria-street, E.C.4.

North Kensington.—The proposed Princess Louise Kensington Hospital for Children, at St. Quinton-avenue, W.10, will provide 50 beds, costing £80,000. The joint architects are Messrs. J. T. Saunders, F.R.I.B.A., 1a, Lindengardens, W.2, and George A. Lansdown, F.R.I.B.A., 9, Regent-street, W.1.

Old Bond-street.—On a site at the corner of Old Bond-street and Burlington-gardens, W.1, J. & E. Atkinson, Ltd., perfumiers, Southwark Park-road, S.E.16, are to erect a six-story West End branch. The builders are Messrs. E. A. Rooome & Co., Ltd., 7, Chiswick-street, E.9, the architects being Messrs. Stanbrough & Harris, 29, St. James's-square, S.W.1.

Orange-street.—A new church and school are to be built in Orange-street, Leicester-square, W.1. Messrs. Kieffer, Fleming & Keesey, 83, Pall Mall, S.W.1, are the architects.

Regent-street.—Messrs. Henry Tanner, 3, Hanover-square, W.1, have prepared plans for the rebuilding of shop and showroom premises at 163-165, Regent-street, W.1, for the International Fur Stores. The contractors are Messrs. Hall, Beddall & Co., Ltd., Waterloo Bridge, S.E.1.

Regent-street.—New premises for Messrs. Negretti & Zambra, and Messrs. T. & J. Perry, jewellers, are to be built at 124, Regent-street, W.1. The contractors are Messrs. G. Godson & Sons, Ltd., Pembroke Works, Kilburn-lane, W.10, and the architects Messrs. E. Harry Major, 2, John-street, Bedford-row, W.C.2, and W. Jennings Cox, Shamley Green, Guildford.

Richmond.—A site in George-street, Richmond, has been acquired by Messrs. Edwards & James, Ltd., dairymen, 57, Friars Style-road, Richmond, for the erection of a model dairy and bottling depot. Plans have been prepared by Mr. Dear, chief architect to the United Dairies, Ltd., 34, Palace Court, W.2.

St. John's Wood-road.—It is proposed to spend £40,000 to £50,000 on new stands at Lord's Cricket Ground. Mr. Herbert Baker, F.R.I.B.A., 14, Barton-street, S.W.1, is architect to the M.C.C.

St. Mary Axe.—New offices and warehouses are to be erected in St. Mary Axe, E.C.3, with frontages to Houndsditch and Camomile-street, for Messrs. Bunge & Co., Ltd., grain and rubber merchants, Bury-street, E.C. Mr. Delissa Joseph, F.R.I.B.A., 2, Basinghall-avenue, E.C.2, is the architect.

Woolwich.—An assembly hall and school, costing £57,000, is to be erected at Woolwich in Red Lion-lane, S.E. Mr. G. Topham Forrest, F.R.I.B.A., is the architect.

Canada House.

In connection with the new Canadian Headquarters, Trafalgar-square, illustrated in our last issue, Messrs. Stevens & Adams, Ltd., ask us to state that they supplied, fixed and polished the whole of the oak, birch and maple flooring in the building.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—Ed.

Foreign Slates.

[REPLY TO "BUILDERS' MERCHANT," JUNE 19.]

SIR,—I should personally be very reluctant to make use of the slates described by your correspondent. The toughness of a slate depends very much upon the compactness and homogeneity of its structure, and it must be remembered that slates cleave across their natural bed so that the adhesion of particles is not ensured by the natural weight of the slate bed. The pyritic impregnations observed are really interruptions in the structure of the slate, and I should anticipate from such signs a variably brittle slate, and one not to be compared with the excellent slates obtainable from the Welsh quarries. French slates, from dark blue to black, are considered at best only of fair quality, and I should strongly advise your correspondent to stick to the British article unless supplies are definitely not obtainable by the date required.

"BRITISH."

Subsidy Houses.

[REPLY TO REGINALD J. SLATER, JULY 3.]

SIR,—Everyone who is an owner of land is entitled to utilise it to its full advantage and to his own interests provided he (1) conforms to the restrictive and other covenants under which he purchased the land; (2) complies with the requirements of the by-laws of the local authority, or any local Act or Acts of Parliament in force in the district where the land is situated.

The fact that the inquirer purchased a house on which the builder, and not the purchaser, was paid a subsidy, does not of itself preclude him from utilising vacant land adjacent for the erection of a garage. Further, if, as it appears, the plans of the garage have been submitted to the local authority, and that authority, as it is bound to do, has signified its approval or disapproval, and has disapproved them, on account only of the Ministry of Health stating that "No house shall be granted government subsidy if a garage is included," it is open to inquirer to risk proceeding with the work. In the matter of contravention of by-laws the local authority is only concerned with what is done on the land, not what is shown on plans, etc. (See *Robinson v. Barton Eccles L.B.*, 1883, 6 A.C. 798). Here it is clear the garage was not included in the house upon which the subsidy has been paid. The obvious intention of the Ministry was to exclude a garage from reaping any advantage from the subsidy or being built thereunder, and in this case the proposed garage is to be built as a matter quite apart from the subsidy.

Electric Lighting.

[REPLY TO "PLANNER," JULY 3.]

SIR,—A "rough-and-ready" rule for ascertaining the number of lamps, of given candle-power, required for evenly illuminating unobstructed floor space in warehouses is as follows:—

Let N = Number of lamps required.
 P = Candle-power of the lamp.
 L = Length in feet of apartment to be lighted.
 B = Breadth in feet of apartment to be lighted.

$$\text{Then } N = \frac{L \times B}{4P}$$

This assumes that height of lamp above floor does not exceed 10 ft., and that lamps are equally distributed. If height is 12 ft., take 3 P ; if 14 ft., 2 P .

W. G. W.

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

Scottish Housing.

Sir J. Gilmour, Secretary for Scotland, informed Mr. Stephen that 3,938 houses had been built in Scotland under the Act of 1923, of which 934 were built in Glasgow; 75 houses had been built under the Act of 1924, of which none were built in Glasgow.

Steel Houses.

Sir K. Wood informed Mr. R. Smith that the following was a statement of the number of houses of external steel construction which local authorities had been authorised to erect:—

Name of Authority.	No. of Houses.	Type.
Birmingham ..	8 ..	Telford
Bristol ..	20 ..	"
Bolton ..	100 ..	"
Hastings ..	8 ..	"
Smethwick ..	6 ..	"
Swansea ..	2 ..	Own design resembling Weir type

Woolwich a small number (not exceeding 20) .. Telford

The average cost of the Telford houses was £490 each, and the estimated cost of the two houses to be erected at Swansea was £500 each. All the houses were of the non-parlour type. The figures did not include the 150 houses to be erected under special arrangements for demonstration purposes.

London Housing.

Mr. Viant asked the Minister of Health if any meetings had been held of the local building industry committee for London to deal with the supply of labour for housing under The Housing (Financial Provisions) Act, 1924; and, if not, what were the reasons for the delay.

Mr. N. Chamberlain said he was informed that there had been four meetings of the Central Local Building Industry Committee for London. In addition to the meetings held by the Central Committee, which was a Co-ordinating Committee, five District Committees had held meetings for the purpose of augmenting the labour supply in London, and other District Committees were now being set up.

Subsidy for Mass Production.

Lieut.-Colonel Horlick asked the Minister of Health whether he had considered encouraging the development of house building by mass production by offering the subsidy now being given under the Wheatley Act for houses that could be sold as well as leased?

Mr. N. Chamberlain said he had considered the suggestion contained in the question, but he was not satisfied that the desired effect would be obtained by an increase of subsidy, or that the subsidy at present available for houses built for sale was inadequate. In any case fresh legislation would be necessary, and he could hold out no hope of this in the present Session.

Price of Bricks.

Captain Bullock asked the Minister whether he would state the increases in the price of bricks since the beginning of April; whether he was aware that in some instances the price had risen from 71s. 9d. per thousand to 81s. per thousand; whether there was any explanation of this serious advance; whether he had made inquiries into its effect on housing; and what action, if any, he proposed to take in the matter.

Mr. N. Chamberlain said that the information in his possession did not indicate that there had been any general increase in the price of bricks since the beginning of April, but if the hon. and gallant member would furnish him with particulars, he would refer the matter to the Committee on the Prices of Building Materials for inquiry.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the name of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, &c.

PROPOSED NEW BUILDINGS & OTHER WORKS.

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owner taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylum Board; and M.W.B. for Metropolitan Water Board.

ABERCARN.—The Trustees of the Gellygaer Lecture ship Endowment have granted £4,000 out of the required £5,000 to St. Luke's Church, Abercarn, for the erection of a new church.

ACCRINGTON.—The Accrington District Gas and Water Board are to carry out their project to erect a bridge over the valley.—A sketch plan has been prepared of the proposed new shelter to be erected at the upper end of the bowling green at Milnshaw Park. The Borough Surveyor has been authorised to proceed with the erection forthwith.

ALDERSHOT.—The M.H. has sanctioned the erection of a further 100 houses on the Aldershot Park estate, by direct labour, for the T.C.

ATHERSTONE.—The R.D.C. are to carry out a slum clearance scheme.

AUDENSHAW.—The U.D.C. passed plans: Eighteen houses, Manchester-road, Dryolesden-road, and Boggart-lane, for Paton & Wood, Ltd.

BACUP.—The M.H. has sanctioned a loan of £18,97 for the erection of 40 houses at Heath Hill and street works on the estate.

BATLEY.—The West Riding C.C. has received amended plans of the proposed extensions at the Technical School submitted by the managers, while the Committee has approved.

BENTLEY.—The U.D.C. have decided to proceed with the erection of a batch of 94 houses on the Old Hall estate.

BENTLEY-WITH-ARKSEY.—The West Riding E.C. recommend that the fencing of the site of the proposed Middle school be carried out, at a cost not exceeding £500.

BLAENAVON.—The Blaenavon (Mon.) Medical Society is to convert, at an estimated cost of £3,000, premises presented by the Blaenavon Coal Co. into an hospital.

BOLTON.—The Rev. Father Burke has secured "Thornleigh," with the adjoining house "Hayward Leigh" at Sharples, which it is proposed to alter and adapt as a secondary school for boys.—The T.C. have agreed to prepare the site on Victoria-square for the War Memorial, and to allow the front portion of the Town Hall to be utilised for the Hall of Memory. The memorial has been designed by Messrs. Bradshaws Gass & Hope, F.R.I.B.A., architects, 19, Silverwell street.

BRAINTREE.—The Essex C.C. recommend the purchase of "Old County Court," for purposes of a combined clinic.

BRAITHWELL.—The West Riding E.C. recommend that a plot of land containing two acres be purchased as a site for the proposed new Council school.

BRIGHTON.—Messrs. J. L. Murdoch's premises in Western-road are to be rebuilt at a cost of £9,000. Plans have been approved and application is to be made to the M.H. for sanction to borrow the sum £9,000 to defray the cost of the work.—Application to be made to the M.H. for sanction to the borrow by the T.C. of £9,950 for the erection of houses.—The T.C. passed a new £100,000 reconstruction scheme for Brighton Aquarium. Application is to be made to the M.H. for sanction to borrow the money.

BURNLEY.—A tender has been accepted for £24.45 for the demolition of the old stone culvert in Yorkshir street, and for the erection of a new steel reinforced concrete aqueduct with concrete retaining walls.—A contract has been provisionally let to a local firm for the erection of the new Lionel-street schools.

BURTON-ON-TRENT.—The Corporation are acquiring a site in High Bank-road for the erection of house. A motor bus garage is to be erected in Hornblow street, at an estimated cost of £3,000.

BURY ST. EDMUNDS.—The T.C. propose erecting 1 cottages.

CAMBRIDGE.—The T.C. passed plans for a sub-station in Cam-road, for the Cambridge Electric Supply Co. Ltd.

CARDIFF.—The B.E. and the local authority have approved the plans for the erection of a new school for the parish of St. Joseph's R.C. Church.

CHORLEY.—The T.C. are to acquire land between Crosse Hall-lane and Cowley in East Ward for housing purposes. Further housing development is to be carried out on land off Queen's-road, where the E.C. propose to erect an open-air school.

CLAVERING.—The Essex E.C. recommend the erection of a house for the teacher at the Council school, for £650.

COLNE.—Application is to be made to the M.H. for sanction to borrow £30,724 in connection with the Haverholt housing scheme.

CROMPTON.—The U.D.C. have decided to complete the war memorial site by laying out the rear portion

* See also our List of Contracts, Competitions, etc.

as a small park with a bandstand and rest gardens. The District Surveyor, Mr. J. Fothergill, has prepared the plans.

CUDWORTH.—The M.H. has agreed to the U.D.C. erecting 64 houses on the Albert-street site.

DAGENHAM.—The Essex C.C. are to build a school on the new housing estate by direct labour.

DARLINGTON.—The Corporation is to make application to the M.H. for sanction to borrow £6,850 for alterations and improvements to the cattle market.

DARWEN.—The Corporation have decided to loan £5,000 to the Spring Vale Garden Village, Ltd., for the purpose of erecting further houses. Mr. T. C. P. Catchpool, of Greenfield Mill, is the architect.

DERBY.—Plans for the provision of the Mental Hospital of a nurses' home at a cost of £20,200 are to be submitted to the Board of Control. The Housing Committee recommend the purchase of a housing site of 16,030 square yards of land on the Rykneld estate, and that the M.H. be asked to sanction the borrowing of £1,378 15s. for the scheme.

DINNINGTON.—The West Riding C.C. recommend the purchase of a site for the proposed Mining and Technical Institute.

DONCASTER.—The site of the old Doncaster aerodrome, near the race common, has been purchased by the Doncaster Corporation for use as a garage for motor buses. The Darlington Fencing Co., Ltd., of London and Harlow, Essex, have purchased a large site at Balby Carr for the proposed erection of new works. New railway sidings are to be constructed. The contractors for the works are Messrs. W. Millins & Co., of Doncaster. A number of houses are also about to be erected for the employees. A new open-air school is to be erected at Church-lane, Warnsworth, by the E.C.

DUNBAR.—The Scottish Board of Health has held an inquiry regarding the improvement scheme which the T.C. propose making.

DUNDEE.—Plans and sections of proposed new buildings, &c., have been lodged at the office of the City Engineer: Arbroath-road and Ferry-road, dwelling houses for the Northern Housing Association, Ltd.; architect, W. B. D. Keith, 10, Whitehall-street; Craigie-avenue, Greendykes-road, and Arbroath-road, dwelling houses for the T.C., plans by Housing Director; Stirling-avenue, dwelling houses for the T.C., plans by Housing Director.

DURHAM.—The R.D.C. is to erect sixteen houses at Pitlington.

EBBW VALE.—The U.D.C. is to borrow £59,000 for the erection of 100 additional houses.

HAYES.—The U.D.C. are to build 21 houses in Cranmer-road. The Council has approved plans for a new church in Station-road.

HEMSWORTH.—The West Riding C.C. recommend that electric lighting be installed at the Secondary School and the Headmaster's house, at £343.

HICKLEY.—The R.D.C. propose erecting 150 houses. **HORNSEY.**—The T.C. passed plans: Five houses and garages at Lauradale-road; eight in Creighton-avenue; 10 garages at the rear of 42, High-street, Highgate; and a Friends' meeting house at Church-crescent.

KINGSTON.—The T.C. are to make application to the M.H. for sanction to borrow £10,000 more for housing.

LAINDON HILLS.—The Essex E.C. recommend the provision of two additional classrooms, at the Council school, at £3,040.

LEEDS.—The T.C. passed plans: Winder & Jones, ten semi-detached houses, Stainbeck-lane; G. Monkman, thirteen houses, Farm-road, Cross Gates; A. Beol, ten semi-detached houses, Jessamine-avenue and Old-lane, Beeston.

LEICESTER.—The E.C. recommend the following expenditure and alterations, &c., to various schools:—Alterations, St. Mary's Fields School, £2,348; new school, Knighton Fields, £19,276; extension, Coleman-road school, £3,438; Talley estate school, £17,096; site for Barkby-lane school, £500; Park estate school, £19,276; Wyggeston Girls' school, £89,500; sports pavilion at Wyggeston Boys' school playing fields, £1,800; and a new art room, Newark Secondary School, £1,997.

LINTWHAITE.—The West Riding E.C. propose to provide a new "middle" school for about 500 scholars. **LLANELLY.**—The B.C. is to erect a new school in Queen Mary's Walk.

LITTLEBOROUGH.—The school managers have recommended the County authorities to provide a higher standards school on modern lines fully equipped with cookery centre, handicraft centre and playing fields for the district of Wardle.

LONDON (BATTERSEA).—The L.C.C. Education Committee have decided to build a workshop at the Linden Lodge residential school, Battersea, at a cost of £1,645.

LONDON (BETNAL GREEN).—The M.H. held an inquiry into the B.C.'s application to borrow £115,000 for the erection of public baths and washhouses.

LONDON (GREENWICH).—The L.C.C. recommend the borrowing by the B.C. of £63,048 for housing purposes.

—The L.C.C. Education Committee have selected a site in Thornlee-road for the erection of an elementary school.

LONDON (HACKNEY).—Extension of Hackney Institute, at a cost of £62,370 is recommended by the L.C.C. Education Committee.

LONDON (ISLINGTON).—The L.C.C. recommend the borrowing by the B.C. of £7,906 for housing purposes.

LONDON (KENSINGTON).—The B.C. has prepared a scheme for the erection of 38 flats, at a cost of about £17,000, on land in Virginia-place, and tenders for the work are to be invited.

LONDON (LEWISHAM).—The L.C.C. Education Committee decided to erect a domestic economy centre at the Rangefield School, at a cost of £1,334.

LONDON (POPLAR).—The L.C.C. recommend the borrowing by the B.C. of £4,398 for housing purposes. —A site in South East-row, Poplar, is to be purchased by the L.C.C. Education Committee for the erection of an elementary school for 768 children.

LONDON (STOKE NEWINGTON).—The L.C.C. recommend the site in Albion-road for the erection of a central school.

LONDON (ST. PANCRAS).—The B.C. passed plans: New building at Huntley-street, Pancras-street and Shropshire-place for the Royal Ear Hospital.

LONDON (ST. JOHN'S WOOD).—The M.C.C. Committee are to consider the proposed improvements to the cricket ground. One scheme is to increase the accommodation on the Mound Stand by about 1,000 seats, at a cost of about £8,000, and the other, a bigger one, would include the rebuilding of the grand stand and the erection of an upper tier to the ring seats, which would cost nearly £35,000.

LOXTON (STREATHAM).—Additional science accommodation is to be provided by the L.C.C. Education Committee, at the County Secondary School, at a cost of £1,410.

LYTON.—The T.C. recommend that, subject to the approval of the B.E., the Boys' and Girls' Departments, Denbigh-road school be enlarged by the addition of one class-room to each in accordance with the plans submitted. Tenders are to be invited for the work, and application made to the M.H. for sanction to borrow £500 to meet the cost of buildings and furniture.

LYTHAM ST. ANNES.—The B.C. propose to erect a further 50 houses, viz., 26 at Preston-road and Mornington-road, Lytham, and 16 in Cross-street, and eight in Heeley-road, St. Annes.

MALDON.—The T.C. are to make application to the M.H. for sanction to the borrowing of the sum of £500 for carrying out the works suggested by H.M. Office of Works at St. Giles' Hospital ruins. Application is to be made to the M.H. for sanction to borrow £8,500 to cover the cost of 16 houses.

MALTRAY.—A further 50 houses are to be erected by the U.D.C.

MARKET HARBOROUGH.—The U.D.C. have decided to subsidise a further 30 houses. The Kettering U.D.C. electricity department are to construct a sub-station at the Green, Great Bowden. The Council are to construct stables and cottage at Springfield-street, at a cost of £950.

MERTON.—The governors of the Nelson Hospital have prepared a scheme for extensions, including the provision of public and private maternity wards and clinics.

MERTHYR TYDFIL.—The B.C. is to borrow £30,000 for public improvements, including baths extensions and the construction of new roads.

MIDLESTOWN.—The West Riding E.C. recommend that two plots of land be purchased as a site for the Shitlington Middletown proposed new school.

MIDDLETON-IN-WHADEFALD.—The West Riding C.C. recommend that renovations at the Sanatorium be carried out at an estimated cost of £645 7s. 6d.

MITCHEM.—Surrey E.C. are inquiring for a site for a new infants' school.

MORECAMBE.—The Lancashire Higher Education Sub-Committee are to ask the C.C. to authorise application to be made to the M.H. for sanction to a loan of £5,800 to cover the cost of the purchase, fencing and forming of a playing ground, and the erection and equipment of a gymnasium in connection with the Morecambe Grammar School.

NEWBURY.—The Housing Committee submitted a scheme for the erection of thirty-two houses on a site adjoining St. George's-road, between Bartholomew-street and Rockingham-road, at an estimated cost of £440 per house, which was approved by the T.C. Application is to be made to the M.H. to borrow £3,000 for the work.

NEWMARKET.—The R.D.C. are to erect 200 cottages during the next two years.

NORTH FLEET.—The U.D.C. surveyor is preparing plans for a new housing scheme. Plans have now been lodged for the new building at Messrs. Bevan's works The Shore.

OLDFHAM.—Application is to be made to the M.H. for sanction to the borrowing of the sum of £5,810 for the reconstruction of conveniences in the Market-place.

—The C.B. are to submit an alternative scheme for the erection of an administrative block at Strinesdale Sanatorium, and the Sanatorium at Westhulme be adapted for use as a Children's Hospital. The Borough Engineer and Surveyor submitted a plan and estimate of the cost of a proposed workshop at the Central Baths, and the C.B. resolved that the plan be approved and tenders be obtained. Plans are to be prepared and tenders obtained for the proposed extension of the Ascroft-street School. The Council considered the question of the proposed extensions at the Castleshaw School of Recovery. The Waterworks Committee have decided to provide the land on which the proposed extension could be built. The C.B. passed plans: J. Bewley, 22 houses, Gordon-avenue; Central Mill

Co., transformer house in Mill-yard, Central Mill, Woodstock-street; The Corporation Park and Cemeteries Committee, new pavilion, Watersheddings Recreation Ground.

OSSETT.—The Governors of the Grammar School have received sanction for the proposed alterations and extensions to the Grammar School building. The County Architect has been instructed to push forward the preparation of plans as it is hoped to let the tenders before the end of the year. Sanction has been received from the M.H. authorising the borrowing of £15,640 to cover the cost of the proposed new Council School at Gawthorpe.

OTLEY.—The B.E. has intimated their approval of the carrying out of the Grammar School scheme of extensions to the new buildings.

PENRITH.—The U.D.C. are considering plans submitted by Mr. J. Harding for the development of the Croft House estate. The R.D.C. are to erect a bridge at Glassenby Wath at a cost of £186. The rural surveyor reports that a bridge over the Newton Reigny Wath will cost £700 or £800.

PETERBOROUGH.—The City Engineer and the Electrical Engineer has been asked to prepare plans for extensions at the electricity station, and tenders are to be invited.

POPLAR.—The managers have now prepared plans for the proposed Roman Catholic School, to be erected in Grundy-street, providing accommodation for 264 children.

PRESTON.—Mr. G. H. Broadbent, architect, 12, Guildhall-street, has prepared the plans for the proposed new branch stores to be erected on a site at Freckleton for the Fylde Industrial Co-operative Society, Ltd.

RAMSBOTTOM.—Plans have been approved for the erection of 10 subsidy houses in Dundee-lane.

RAWFESTALL.—The U.D.C. propose to erect a number of dwellings of the bungalow type.

ROMFORD.—Funds are being raised towards the cost of a new Baptist Church, which is to be erected on a site on the main road, near Junction-road. The cost is estimated at between £8,000 and £10,000.

ROTTERHAM.—The T.C. approved the Housing Committee's proposals to build the following houses in the next two years: Aston-cum-Aughton, 120; Bramley, 50; Brampton-Bierlow, 100; Brinsworth, 100; Catcliffe, 100; Dalton, 76; Hooton Levitt, 20; Hooton Roberts, 24; Ravenfield, 120; Thrybergh, 120; Thurcroft, 200; Treeton, 100; Wentworth, 20; Whiston, 50; Wickersley, 50. —A site has been given for the proposed erection of a new church and mission room at Bramley.

SHARLTON.—The West Riding E.C. recommended that a caretaker's house be erected on the site of the Sharlston New Sharlston Council School, at an estimated cost of £550.

SHEFFIELD.—Messrs. Wilkes Bros. are proposing to erect new premises on Exchange-street. The plans are in the hands of Mr. A. Nunweek, architect, of Sheffield.

SIPLEY.—The U.D.C. passed plans for 12 houses in Gaisby Mount, for F. Dalby.

SOUTH KIRBY.—Plans have been approved for the erection of a new school to accommodate 600 scholars, at an estimated cost of £18,000.

STAMFORD.—The T.C. decided to utilise part of the Butter Market for the provision of a waiting-room and other conveniences. Plans passed: Twenty-four houses to be erected on the New Cross-road site.

SWINDON.—The T.C. passed plans for 27 houses for A. J. Colborne in various places.

SWINTON.—The Council has received the approval of the District Valuer for the purchase of two fields and the provisional sanction of the M.H. for the erection of another hundred houses on the site.

THEDWASTRE.—The R.D.C. instructed the architect to prepare plans for the erection of 42 cottages. Tenders are to be invited.

THORNE.—The B.E. has intimated approval of the purchase by the Governors of Thorne Grammar School, of a site containing approximately 10½ acres, at a cost of £2,353, for the erection of new school buildings.

TIVERTS.—The Nenagh County Board of Health propose renovating the County Home, at a cost estimated of about £10,000.

TROWBRIDGE.—The T.C. has approved plans for the erection of new police buildings.

UXBRIDGE.—The M.H. held an inquiry into the application of the R.D.C. to borrow £81,000 for a sewerage scheme for the parishes of Harefield, Hillingdon, and Ickenham. The full scheme will cost £127,000. The engineers are W. H. Radford & Son, of Nottingham.

WATH.—The B.E. has approved the plans of temporary extensions at the secondary school, at an estimated cost of £3,500.

WEST BROMWICH.—A new police station is to be erected at Greet's Green by the T.C. at a cost of £1,800.

WORTLEY.—The West Riding C.C. recommend that the Highways Committee be authorised to expend a sum not exceeding £824 in reconstructing a length of 240 yards of burr wall and fence wall or erecting post and rail fence along the Wadley, Langsett and Sheffield main road.

FIRES,

RAMSBOTTOM.—Damage estimated at between £30,000 and £40,000 was caused by a fire at Ramsbottom Paper Mill.

Shredded Wheat Factory, Welwyn.

With reference to the article and illustrations appearing on the above factory in our issue for June 26, we are informed by Messrs. Broad & Co., Ltd., of 4, South Wharf, Paddington, W.2, that more than 1,000 tons of their "Blackfriar" Brand of Portland cement was used in this building.

NEW BUILDINGS IN SCOTLAND

Renfrew.—HOUSES.—The T.C. has decided to erect 12 houses in the High-street.

Sanquhar.—HOUSES.—The Board of Health have passed plans for 14 houses to be erected by the T.C., on the piece of ground between the monument in High-street and the Hermitage.

Thornton.—HOUSES.—Arrangements are being made for the erection of 40 houses in Strathore Park. The architect is Mr. Williamson, of Kirkcaldy.

Perth.—HOUSES.—The Town Council have decided to erect 150 houses.

Aberdeen.—HOUSES.—The Housing Committee of the Town Council have been notified that the Board of Health approve of their proposal to erect 300 houses on the Hilton estate, and the Committee have now recommended it for the approval of the Council. The total cost of the scheme will be £120,000.

Longest Concrete Arches.

A reinforced concrete bridge, 3,935 ft. in length, which is about to be built over the River Elorn, in Brittany, will contain the world's longest concrete arches. Three of these will have each a span of 590 ft.

Atmospheric Pollution Report.

The Committee for the Investigation of Atmospheric Pollution, appointed by a conference of delegates of municipal authorities in connection with the Smoke Abatement Exhibition in 1912, has issued a report which covers the year ended March 31, 1924. Following a short introduction, the report is divided into eight sections. Three of these deal with the results obtained by the standard deposit gauge; the automatic filter, which measures hourly the amount of impurity suspended in the air; and the jet dust counter, which allows a microscopic examination of dust particles to be made. The remaining sections deal with experimental aspects of the work and observations in connection with the study of atmospheric pollution.

TENDERS

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

* Denotes accepted. † Denotes provisionally accepted.
‡ Denotes recommended for acceptance.
§ Denotes accepted subject to modifications.

LONDON.—Painting and repairs to the Infirmary, 285, Harrow-road, W.9, for the Paddington B.G. :—

*Arthur Vigor, Ltd., London £867

LOUTH.—Repairs to Taylor's & Thompson's Bridge, for the C.C. :—

*T. Byrne £185

LUTON.—For (a) 24 houses in Selbourne-road, and (b) two in Stratford-road, for the T.C. :—

(a) *Luton Building Co. £12,840

(b) *T. Day & Son 1,096

(Subject to M.H. approval.)

MALDON.—Sixteen houses in Cross-road, for the T.C. Mr. Thos. R. Swales, M.I.C.E.I., architect :—

F. H. Sherling, Maldon £7,796 0

B. T. Annereau, Westcliff-on-Sea .. 7,655 0

*W. A. Claydon & Son, Ulting. 7,500 15

MALDON.—Bungalow in the recreation ground, for the T.C. Mr. Thos. R. Swales, M.I.C.E.I., architect :—

W. A. Claydon & Son, Ulting. £747 13 0

F. H. Sherling, Maldon 636 9 6

*G. H. Taylor, Maldon 550 10 0

MANSEFIELD.—Seven handicraft centres for the E.C. :—

*A. R. Roe £3,219 4 1

MILNROW.—Fifty-two houses on the Holt Estate, for the U.D.C. Mr. A. Travis, architect, Union Bank Chambers, Rochdale; quantities by the architect :—

J. L. Clegg, Milnrow.

J. Smith (Norden), Ltd., Rochdale.

James Fielding, Milnrow.

R. Blincoe, Rochdale.

Dryland & Preston, Littleborough.

Allen & Chadwick, Rochdale.

James Mann, Ltd., Newhey.

W. & E. Cryer, Newhey.

Wm. England, Dearnley.

W. H. Ashworth, Rochdale.

*R. & T. Howarth, Rochdale.

NEW ROSS.—Extensions to the

SOUTH SHIELDS.—Installation of electric light at the Westor Boys' Girls' and Infants' Departments, Domestic Subjects Centre, Chemical Laboratory, and two caretakers' houses, for the T.C. Borough Electrical Engineer :—

‡A. J. Wares, Ltd., South Shields.... £295 10

SOUTH SHIELDS.—Roofing the engine house in connection with the extensions to the electricity works at West Holborn, for the C.B. Mr. S. G. Stanton, Borough Engineer; quantities by Borough Engineer :—

*Ainwick Construction & Engineering Co., Ltd..... £2,750

SOUTH SHIELDS.—356 houses on the Cleadon Park Estate, for the Corporation. Mr. S. G. Stanton, Borough Engineer; quantities by Borough Engineer :—

*J. G. Mark, Grange-avenue, Sunderland..... £164 078

SPENNYMOOR.—Improvements to headmaster's room, staffrooms, and boys' and girls' latrines, at Spennymoor Alderman Wraith Secondary School, for the Durham C.C. Mr. F. Willey, F.R.I.B.A., Architect, 34, Old Elvet, Durham :—

†W. Fairless, Bishop Auckland .. £227 9 3

STAINES.—Painting a portion of the exterior of the institution, for the B.G. :—

*J. Hedges, Ashford..... £287

STANLEY.—Thirty-eight houses in Limepit-lane, for the U.D.C. Mr. J. D. Macleod, architect, 4, Frenchgate, Doncaster :—

*W. J. Kendall & Sons, Wakefield.

STOURBRIDGE.—Twenty-six houses on the Grange Estate, for the T.C. :—

*E. R. R. Tooby, Stourbridge.

TEMPLEMORE.—Town Hall, for the U.D.C. :—

*C. Cahill, Rathdowney..... £1,800

TWICKENHAM.—Adaptation work at York House, for the D.C. Messrs. Knott & Collins, architects :—

Arthur Vigor, Ltd.....	£41,574
W. Lawrence & Co., Sons, Ltd.....	37,726

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXIX.—No. 4,302

JULY 17, 1925

THE SPIRIT OF CO-OPERATION

IN ancient times when any particularly favourable conjunctions of stars and planets occurred, such occasions were held to be notable days, when the influence of the unseen forces of nature might not be lightly disregarded but rather propitiated by sacrifices and offerings to the high gods in whose hands, it was believed, lay the future destiny of the nation, and its good fortune in the arts of war and peace.

So at this time, when in the architectural world the signs and portents are so evidently favourable, it is appropriate that the first session of the Royal Institute of British Architects after the unification of the profession should have as its prelude a conference of British Architects from all parts of the Empire. For the first time these representatives of the central body and its allied societies have met unfettered by internal differences and party politics, now happily relegated to the limbo of past errors. Thus a great opportunity presents itself, and we hope the result will be a clear call to greater things, and for a larger vision—a source of inspiration for the coming session.

Since the last conference at Oxford much has happened and (without going into detail which is here inappropriate and unnecessary), we can say that the chief event has been the unification of the profession and the amalgamation of the various groups of architects into one powerful body, now really a Royal Institute of British Architects. At Oxford this was a probability; at Newcastle it was an accomplished fact, thanks to the skill and ability of the retiring President, Mr. Gotch, the unremitting efforts of Mr. Arthur Keen as Honorary Secretary, and the excellent team work of the whole Council of the R.I.B.A., to whom the profession owes a real debt of gratitude and the Society of Architects.

We cannot of course forecast the course of events during the coming session, but it would at least appear probable that as internal dissensions have now given place to substantial agreement, adequate attention will now be given to the advancement of architecture in all its various ramifications. The programme for the Conference gave little clue to its real importance for, as is always the case at such gatherings, the value of such meetings is to be found not in the formal proceedings, but in the informal exchange of ideas which almost unconsciously influence the views and opinions of those members who have been elected by their fellows to direct the policy and affairs of the Institute for the ensuing year.

Among these subjects we hope that the question of advertisements may be considered, not only the vulgar and badly designed atrocities which permanently disfigure many sober and restrained examples of architectural composition in the main streets of London and the larger provincial cities, but also those equally obnoxious evidences of tasteless publicity which are scattered over the whole countryside on land adjoining our railways and main roads.

Surely with a well directed appeal to public opinion it would be possible to demonstrate that firms or individuals who can spend large sums in a way which imposes a legitimate grievance on many thousands of educated and inoffensive men and women, could (without undue hardship) contribute a certain amount to the National Exchequer for the public good. In other words, such advertising might be subjected to a graduated scale of *ad valorem* taxation, though even then there would appear to be need for some restriction as to the character of such advertisements, and we believe that any action initiated by the R.I.B.A. with regard to the preservation of the reasonable amenities of our streets, country roads and railways would be well supported by public opinion throughout the country.

Another matter which would seem to call for action, in association with such bodies as the Town Planning Institute, is the urgent question of instituting some form of public control over the design of buildings erected in the streets of our towns and along the new arterial roads now coming into existence. Many of these, considered as individual buildings, are satisfactory, but there is abundant evidence that inadequate con-

sideration is given to the effect of such building or rebuilding considered as parts of a whole composition.

We feel confident that the majority of architects would welcome such control if fairly and properly exercised, and not allowed to degenerate into mere captious criticism as it would undoubtedly strengthen their hands in putting this probably unconsidered aspect of building or rebuilding before an unimaginative client or board of directors. "What is required," writes a correspondent, "is a non-official, non-party and reasonably broad-minded advisory committee (such as, in fact, actually exists in the recently constituted Fine Arts Commission), whose advice could be obtained without additional expense to clients, and whose approval of all schemes for building in important streets, squares, and roads should be obligatory. In fact, I would suggest that it might be advisable to insist that the necessary approval of any such proposals by the local authority should only be given after the approval of the scheme by the advisory committee had been obtained. Probably it would also be found desirable that such a committee should not be permanently constituted, but that its members should be elected for a definite period and should comprise an equal number of architects, town planners, representatives of the local authorities, and members representing the ordinary ratepayers. Such an arrangement would have two manifest advantages: Firstly, it would stimulate public interest in the committee itself and thus in its activities, and secondly it would provide a reasonable safeguard against a too academic and detached point of view in the decisions of the committee which is one of the main objections to any such body."

What is lacking is the corporate spirit; we have lost that invaluable architectural advantage of the eighteenth century, the great landlord of taste and discernment. Thus, although we are agreed as to the enormous advantage to the community of such examples of civic and essentially English architecture as the squares and crescents of quiet, refined and dignified appearance which exist in Bath and many parts of London, yet by a curious paradox we have recently seen this orderly conception of civic beauty replaced in at least one notable London street by a series of buildings many of which are not unworthy examples of architectural design, but which fail completely when judged by the higher standard of civic amenity.

It is not sufficiently realised by those chiefly affected—our clients—that there is value in repose and harmony and that a street which has a definite architectural character is more attractive than one which contains a series of discordant architectural masterpieces. In fact, the need for propaganda and education in this direction might, we think, usefully engage the attention of the Institute during the coming session, as it is difficult to conceive of anything which would be of greater benefit to the advancement of civic architecture; until we have a demand for such unity in design it is useless to bewail the disappearance of it.

Another matter which is of importance is the rapidly diminishing number of skilled craftsmen in such essentially English trades as that of wrought metal work, and here, again, an inquiry by the R.I.B.A. might, we feel, give valuable results before it is too late to provide whatever remedy is appropriate. In fact, the whole question of the interdependence of artists and craftsmen is one which requires to be reviewed in the light of modern conditions, but as is the case with all the questions which we have mentioned here the basic or fundamental principle which underlies all of them is the need of co-operation, the desire of each performer in the orchestra of artistic achievement to contribute of his best towards the whole composition.

And as in our opening paragraph we referred to the belief of the ancients that sacrifice and offerings were desirable to propitiate those unseen powers which could bring human efforts to success or failure, we feel that success in our own endeavours of to-day can only be achieved if all are willing to co-operate for the common good, making such sacrifices as may be necessary for the advancement of architecture and the uplifting of national life.

NOTES.

The Manchester Art Gallery Competition. THE widespread approval of our remarks on the Manchester Art Gallery competition result does not influence us in any desire to depart from an impartial view in the matter. We much regret that anything should have arisen to cast any doubt on the wisdom of the assessors, as to the true intent and meaning of conditions, but we do consider that this competition has shown how needful are the safeguards which should be set up to ensure a perfectly clear and fair issue. This is by no means the first occasion on which a competitor has been able to cast doubt on the wisdom of apparently emphatic conditions. Even if the assessors can satisfy everybody that they were fair and right in their judgment, there is still left an object-lesson for future competition committees to take to heart. A correspondent, whose letter we are glad to print in this issue, says he entirely disagrees with our article on the competition, which judged the winning design as the best. We do not misunderstand the purport of his letter, but we hold to the opinion that such competitions as these should be freely and fairly criticised. May we not say, Let justice be done though the heavens fall!

Town Planning and Building Enterprise. In the administration of the Town Planning Act the decisions of the London County Council sometimes operate to the discouragement of building enterprise. Recently, we are informed, a speculating builder, having acquired an

acre of land, divided it into plots whereon he erected good middle-class dwellings, which were sold as soon as built. When he had completed six of these he was informed by the Council that they had resolved not to allow more than six houses to the acre upon that estate. He had some vacant land remaining and was, and still is, in doubt what use to make of it.

The Sizes of Building Plots.

EVERYONE acquainted with the subject knows that a building plot rarely exceeds 100 ft. in depth, so that a limit of six houses to the acre would necessitate plots about 72 ft. wide—an absurdly extravagant width for an ordinary house of about 20 ft. frontage. It is now rumoured that the Council intend imposing a limit of eight houses to the acre. Under this rule a 100 ft. plot would be over 50 ft. wide, and such a sized plot would usually be beyond the resources of a speculating builder.

Spoiling the Country-side.

LIKE almost every beneficial development, the modern growth of transport facilities has its attendant disadvantages. The democratisation of the motor car, for instance, though an excellent thing in many ways, seems likely to end in the spoiling of the country-side. In all parts of the Home Counties, and even beyond, new houses are springing up like mushrooms every day. Some of these houses are of an excellent architectural character, showing a careful regard for scenic environment and the building traditions of the neighbourhood. Others, alas! ignore every consideration

of amenity. In design they follow the worst manner of suburban speculative building; in material, they are entirely unsympathetic; while, as to arrangement in conformity with any sort of layout, such a thing is frankly not attempted, for there is no plan to conform to. The effect upon the general view is disastrous. The countryside is gradually being dotted over with ugly, unrelated cottages, that ought never to have been allowed to come into existence, and unless prompt official action is taken, the spread of the blight will not be arrested until too late. Within ten miles of the Royal Exchange there are still great tracts of beautiful country, virtually unspoiled; yet on every hand, one finds those threatening notice-boards advertising "desirable building sites," or areas "ripe for development."

SURELY some effort should be made to prevent all this!

Regulated Expansion. Regulated expansion should take the place of fortuitous growth, or, before long, rural England will be rural no more. One solution of the general problem is the creation of community centres with, wherever possible, sufficient local industries to keep their populations employed in the home area, and so avoid the great waste of time, energy, and material resources involved in the daily conveyance of great armies of workers to and from their work. The week-end cottage and country home we shall have with us always, no doubt, but there is no reason why well-to-do people should be allowed to spread themselves over the countryside with entire disregard for rural amenities. They should be encouraged to group themselves together, either in relation to existing communities, or in new garden villages, and so preserve the open country for the essential agricultural and other pursuits and for the enjoyment of all.

The National Playing Fields Association. THE inauguration of this new body on July 8, with the Duke of York as its President, registers a distinct step forward. There will from now on be a central body pledged to devote its attention to the provision of playing fields, and the scandal of acres of streets in which the only wicket is a lamp-post and the only football ground a pavement will not be repeated. The town-planning movement has, of course, helped enormously towards the provision of adequate recreation grounds and praiseworthy efforts have been made by many local authorities, but the need for some co-ordinating and advisory body has long been felt, and we wish the new Association every possible success.

ONE of the most serious **Recreation in Cities.** problems is what is to be done about those centres where playgrounds have long since been crowded out. If we take Moorgate Station as a centre, we find that

The Old Assembly Rooms, Newcastle-on-Tyne: Reception Room.

pensive necessities of life. We want to be a little treasure island in the midst of the great ocean called London, where passers-by can freely come in and gaze round, where purchasers will find treasures worth more than good money, where the artist and craftworker is always welcomed." At the Rowley Gallery just now there is also an exhibition of some charming water-colour drawings, in addition to the many examples of wood inlay and other decorative adornments for which the Rowley Gallery is well known.

The R.I.B.A. Conference.

THE conference of the Royal Institute of British Architects which was held last week in Newcastle and Durham was an unqualified success, not only because the weather was all that could be desired, but because a most interesting programme had been arranged by a body of good organisers appointed by the Northern Architectural Association from their ranks, and any visitor unfamiliar with the qualifications of architects, must have realised that their calling includes not only a knowledge of the art and science of building construction, but a very good business capacity as well. To Mr. R. Norman MacKellar, the Hon. Secretary of the Conference Committee, the chief credit for this success undoubtedly belongs, but there were many willing helpers to all of whom the thanks of the visitors are due. The Conference next year will be held in London, we understand, and if so, it will surely be necessary to devote a week to it, unless a very exclusive programme is arranged.

It means a journey of a mile and three-quarters in any direction to find space for a public football ground, and the land in that area, at Hoxton, Islington, and Bethnal Green, is now so expensive that anything adequate is out of the question. We have to snatch at what opportunities we can to palliate the evils of these great oceans of unlovely brick; but let us see that these follies are not repeated in our own day.

The New Waterworks at Purley.

It is seldom that public services produce buildings of architectural character, and it is the more gratifying to notice the new concrete building that has recently been completed by the East Surrey Water Company at Purley. The sure mode of progression favoured by the Southern Railway allows one to examine this building in some detail in passing, and possibly the railway itself and public services generally may begin to realise that it is more profitable to build something architecturally suitable than to continue in the rut of standardised mediocrity that has long ago been worn smooth. A great deal depends upon the vision of the engineer in charge of works of a purely practical nature, for it is always in his power, if he but knows how to use it, to ensure that touch of proportion and character that convert an uninteresting structure into a valuable, if simple, example of architecture.

In Church Street, Kensington. THE reputation of Church-street, Kensington, as a location for quaint and interesting things, is well known, and amongst the best agencies for various artistic objects

is the nicely-treated home of the Merchant Adventurers, Ltd., in which delightful examples of glass and pottery are to be found, with other interesting things. The aim of Madame Boissevan in her little home may well be described in her own words: "Many entering our little green shop want to know all about us. Our aim is to have our share, no matter how humble a one, in bringing beauty into the market place and in encouraging the production of beautiful and inex-

The Old Assembly Rooms, Newcastle-on-Tyne : First-floor Landing.

GENERAL NEWS

Professional Announcements.

Mr. Gerald R. Clayton, A.R.I.B.A., has removed his office to 18, Richmond-terrace, Blackburn.

Mr. R. S. Dixon, B.Arch. (Liverpool), and Mr. N. D. Quick, A.R.I.B.A., have opened an office at 25, High-street, Guildford, where they will practise under the style of Messrs. Dixon & Quick, architects.

Appointment.

The Council of the Incorporated Society of Auctioneers and Landed Property Agents has confirmed the appointment of Captain John Stevenson, barrister-at-law, as general secretary, vice Mr. Methuen A. Fluder, appointed registrar.

Bath's Roman Relics.

The Earl of Crawford and Balcarres has opened to the public the latest Roman discoveries at Bath, which include two bathing pools.

Music Pavilion, Deal.

Designs for a music pavilion on the shore end of the pier, prepared by Mr. T. Brammall Daniel, F.R.I.B.A., of 36, Victoria-street, Westminster, have been adopted by Deal Town Council. The cost is estimated at between £20,000 and £25,000.

City of London School War Memorial Pavilion.

The site of the City of London School war memorial pavilion and athletic ground, at Grove Park, comprises nearly thirty-six acres. Mr. Ralph Knott, F.R.I.B.A., and Mr. E. S. Collins, F.R.I.B.A., old boys of the school, are the hon. architects of the building.

Kelvin Hall, Glasgow.

Glasgow Corporation have instructed the City Engineer to prepare plans and secure estimate for the rebuilding of Kelvin Hall, recently destroyed by fire. It is proposed that the main portion shall be of steel, with asbestos inner walls, and an asbestos and glass roof.

Fate of a City Church.

The site of the church of St. Katherine Coleman, in Fenchurch-street, has been acquired by Lloyd's Register of Shipping. The church, we understand, is to be pulled down. The benefice has been united with that of St. Olave's, Hart-street, which is close by.

Glasgow Architect Honoured.

On the occasion of his retirement from the staff of the Glasgow School of Art, Mr. Alexander McGibbon, A.R.I.B.A., was recently presented with an illuminated address, recording the high esteem and respect in which he has been held by all with whom he has been associated during his long period of service.

Manchester University New Prize.

The Council of the University of Manchester have accepted the offer made by Messrs. John Tiranti & Co. for a prize to be awarded by the Senate. The award will be known as the Tiranti Book Prize, and will consist of the current issue of the works of the Ecole des Beaux Arts.

National Theatre Plans.

The Shakespeare Memorial Committee has again met to discuss the question of a site in London on which to erect a national theatre as a memorial to Shakespeare. So far the Government has not been able to place a site at the disposal of the committee, but hopes are entertained of greater success in the near future.

Waterloo Bridge.

In reply to a question on Waterloo Bridge at a meeting of the L.C.C., Mr. Meinertzhagen said that the Bridges Sub-Committee were giving careful consideration to the report of the Conference of Societies urging the preservation of the bridge. In view of the complexity of the question he thought it unlikely that the committee would be in a position to report before the recess.

"Childish Archaism" of Epstein.

At the annual conference of the Museums Association, held last week at Exeter, Mr. E. Rimbault Dibdin (late director of the Walker Art Gallery, Liverpool), criticised the Hudson Memorial. Those (he said) who were more or less orthodox were left confounded, wondering whether this sort of return to childish archaism was not a symptom of mortal disease preceding the total dissolution of pictorial art.

R.I.B.A.

The following are notes from the Minutes of the last Council meeting:—

Sir George Oatley.—The Secretary was directed to convey the congratulations of the Council to Sir George Oatley (F.) on the occasion of his Knighthood.

Housing in Holland.—A report was received from Mr. T. Alwyn Lloyd, the R.I.B.A. delegate who accompanied the official visit of the National Housing and Town Planning Council to Holland during Easter, 1925, and was ordered to be published in the Journal.

Waterloo Bridge Broadcast Appeal.

Mr. A. R. Powys, Secretary of the Society for the Protection of Ancient Buildings, recently gave a talk from the London station on Waterloo Bridge. After the London County Council decided that Waterloo Bridge was beyond repair, he said, the Society for the Protection of Ancient Buildings addressed a letter to the Council, stating that this was not the case. If the public and the London County Council realised how important a building Waterloo Bridge was, and how much it was admired throughout the world, both from the engineering and architectural point of view, there would never have been any proposal to demolish it.

Obituary.

We regret to record the death of Mr. William Morton Cowdell, F.R.I.B.A., of Messrs. Cowdell & Bryan, architects and surveyors, of Leicester, on Wednesday, July 8, after some weeks' illness, in his seventieth year. Mr. Cowdell was articled to the late W. Jackson, F.R.I.B.A., of Leicester. He held the appointment of architect to the Small Holdings Committee of the Leicestershire County Council, and the Housing Committee of the Blaby Rural District Council. He was a Past-President of the Leicester and Leicestershire Society of Architects, and served for a period on the Council of the R.I.B.A. His principal works include a number which were carried out in conjunction with his partner, Mr. A. F. Bryan, A.R.I.B.A.

Michelangelo's Models.

With regard to the recent discovery of models of statues for the dome of St. Peter's, Rome, attributed to Michelangelo, although eight were made only seven have been found. They are 2 ft. high, but the marble statues would, of course, have been of gigantic size. No doubt appears to have been suggested in Rome as to the authenticity of the models, and it is not perhaps fanciful to see in them strong resemblances to the great figures of the Sistine.

Central School of Arts and Crafts: A Record Lecture Year.

At the twenty-four lectures on Mediæval Architecture, given for the London University Extension Board by Sir Banister Fletcher, F.R.I.B.A., at the Central School of Arts and Crafts, the attendances exceeded all previous records, totalling 5,574 for the session, as against 3,613 the year before, and against 3,261 the last time the same subject was treated (1921-2). This latest total gives an average attendance of 232 per lecture, as compared with not many more than 100 a few years ago. A course by Sir Banister on Renaissance architecture commences next September.

Hendon Housing Estate.

The London County Council's new housing estate at Hendon covers an area of 530 acres, of which 75 acres are situated on the west side of Edgware-road. It is proposed that its development be entrusted to one master contractor,

"with wide experience, adequate powers of organisation, and substantial resources at his command," the contract to provide for the construction of 3,000 houses and other buildings, with the necessary roads and sewers, with provision for the completion of the contract at the Council's option to about 6,000 houses, for which orders may be given within three years.

University of Manchester School of Architecture.

The Sessional Examination results in the above School are as follows:—B.A., 2nd Class Honours: Frank Whiteley; 3rd Year B.A. Degree, Part I B: Ellen B. Alexander, G. A. Goldstraw, W. H. McNicol; 2nd Year B.A. Degree, Part I A: Arch. McLean, L. S. Jacobson; Intermediate R.I.B.A., Exemption: Irene Florey.

Scholarships and Prizes: Institute of Builders' Travelling Scholarship, Ellen B. Alexander, £60; G. A. Goldstraw, £60; W. H. McNicol, £60.

Royal Manchester Institution: Heywood Prize, £10, Arch. McLean.

Miss Elsie Rogers, who graduated in 1924, has been awarded an "American Commonwealth Fund Fellowship." The Fellowship is of the annual value of £600, and is tenable for two years, during which she will pursue her studies in the School of Architecture of the Columbia University. She will also acquire experience in the offices of American architects, and will be required to visit some of the great cities of the States. Holders of the Fellowship must also acquaint themselves with the Industrial, University and home sides of American life, and will be given opportunities of meeting the leaders in financial, commercial, artistic and other circles.

COMPETITION NEWS

Elementary School, Oldbury.

Oldbury U.D.C. propose to invite designs for a new elementary school for 1,000 scholars, to be erected on a site in Bristnall Hall-lane. The Town Clerk is Mr. Arthur Culwick.

Bolton Infirmary Extension.

The Bolton Infirmary Extension Committee are inviting architects in practice in the Bolton Union area, and architects in practice elsewhere but resident in this area, to submit designs for extension buildings adjoining the Bolton Infirmary and Dispensary. Premiums: £200, £100 and £50. The Committee have appointed Mr. Chas. T. Adshead, A.R.I.B.A., of 14, St. Ann's-square, Manchester, assessor. A plan of the site, &c., together with conditions may be obtained by competitors from the secretary of the Extensions Committee at the Infirmary.

Valetta Town Planning.

In the competition for the lay-out of the area immediately outside Valetta, the capital of Malta, the first prize of £1,000 has been won by Mr. James Burford, the former chief lecturer on Architecture at the University of London, and Mr. Rowland Pierce, in association. The second prize of £500 has been awarded to M. René Danger. The assessors were Professor L. P. Abercrombie, Professor of Civic Design, Liverpool University, and Mr. E. P. Warren, of London.

Other Competitions.

Coventry Hospital.*

Sevenoaks U.D.C. Housing.*

Gower R.D.C. Housing.*

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Argentine Institute (Dec. 31; April 24). Copenhagen Bridge (Sept. 1; April 24). Newcastle Fire and Police Station (Oct. 8; June 12). Drammen Bridge (Oct. 1; May 29).

* Competitions when "warned" or vetoed by the R.I.B.A. are Starred.

THE ENTRANCE FRONT.

J. NEWTON, Architect (1776). Restored by MESSRS. CACKETT & BURNS DICK, F.F.R.I.B.A.

CORRESPONDENCE

Manchester Art Gallery Competition.

SIR.—The correspondence on the above subject would lead non-competing architects to conclude that the conditions of competition were impossible of fulfilment consistently with the production of a first-class design. This is not so. Moreover, before we completed our design we deduced solely from the said conditions, the plan, convenient and compact, on which these conditions were—or at any rate, might have been—based. Below is the section from Piccadilly to Parker-street of this preliminary plan.

Note.—MM. are mezzanines for small statuary.

POINTS.

- (1) The Museum is one circulation—always progressive. It is continued all along the Portland-street front.
- (2) But the "through" corridors flanking the Statuary Hall solve the problem (mostly unsolved) of progressive circulation when any particular gallery is closed.
- (3) The Hall of Memory is near the east end, separated from Portland-street by the Museum and flanked by areas roofed in about the level of Museum ceilings.
- (4) Small sculpture or statuary is in a mezzanine surrounding the large Hall of Statuary. It has the defect of being far from the light—a defect common to most of the designs.
- (5) The division of picture galleries (from one progressive circulation) into eight or nine such is provided by corridors flanking the Statuary Hall placed above the mezzanine statuary galleries.
- (6) The administrative offices are on the first floor in the central portion of the garden front.
- (7) Second floor picture galleries are placed over the offices.
- (8) No porte cochère.
- (9) Probably the basement would cover only half the area owing to considerations of cost, the level being 4 ft. below the average of the surrounding streets.
- (10) The goods entrance is in Parker-street.
- (11) The Lecture Theatre is probably at or near the Portland—Parker-street corner.
- (12) The Print Room is on the ground floor.

STOTT & SONS.

(A. Henthorn Stott).

SIR,—For many years I have studied in silence the criticisms of unsuccessful competitors which your journal has had the courtesy to publish. I cannot remember a competition in which one or more of the unsuccessful have not rushed into print with some point which appeared to be most important to themselves, but about which the assessor or assessors possessed an entirely different view-point. I do not object to Mr. Glover writing to say that he approves of your criticism, on which, however, there are many other views than those of your critic; but I think (perhaps incorrectly) that it is hardly the right thing to use your columns for the formation of a society for dissatisfied competitors, more especially as he is a member of the Royal Institute of British Architects, to whom, in my opinion, he should have appealed before dragging this matter into both the technical and lay press. The whole point seems to me to become one of professional etiquette, and does not centre on the reading or mis-reading of an isolated condition quoted without reference to the context, and used in much the same way that a barrister uses an abstruse or minor point when he knows that he has a very weak case. Doubtless some of the unsuccessful competitors are aware that

the game of cricket has been played in England for many generations, and a study of the rules of that noble game might induce them to abide by the umpires' decisions. Even if they are unacquainted with cricket, they may have played football, in which game the teams play to the whistle of the referee, even if he occasionally misses a minor point in the game.

I suggest with all humility that our profession would be more likely to gain the confidence and respect of all public bodies and the general public if all its members really played the game. I would like to add that this is the only letter I have ever written to the press; that I was not a competitor for the Manchester Art Gallery;

and am not intimately acquainted with any of the assessors.

Before writing this letter I have carefully read the conditions and answers to questions of the competition, the assessors' report, the correspondence in your columns, and your critic's review of the designs in your issue of June 26, with which latter I entirely disagree.

WILLIAM T. BENSLYN.

SIR,—Since the war, there seems to be a tendency among architects unplaced in public competitions, to make unsportsmanlike charges as to the fairness of the assessors' awards.

In one case, the competitors making these complaints were compelled by the Institute to make a public apology and to withdraw their unfounded charges.

I venture to think that the same thing would happen if the protests made by a small minority of the Manchester Gallery competitors were similarly investigated.

Meanwhile, as much harm may be caused, both to the successful competitor and to architects generally, by the clamour of these members of the profession if no one troubles to take up the cudgels on the other side, I shall be obliged if you will publish the enclosed copy of a letter written to the Corporation by

ANOTHER COMPETITOR.

July 2, 1925.

[GENTLEMEN,—A disgruntled competitor signing himself "Critic," has chosen to air his imaginary grievances in the technical press. He has so little title to the pseudonym, and is so filled with spleen, as to be unable to recognise the outstanding greatness of the winning design.

In the ordinary course anonymous letters of this description do not call for a reply, but this letter deliberately suggests that:—

- (1) The award is an illegal one;
- (2) The Corporation ought to reconsider the competition;
- (3) The award is so unfair that the Royal Institute ought to be consulted about it.

It therefore appears to be the duty of someone thoroughly acquainted with the competition conditions, replies to questions, and the designs submitted, to express abhorrence of such a letter in the strongest possible terms. As one of the unsuccessful competitors who has carefully examined the whole of the designs I have all these qualifications.

Let such a letter should cause the Corporation to hesitate in seizing the opportunity of erecting a building which gives every promise of being the finest Art Gallery and Museum in the provinces, I write respectfully to congratulate the Corporation on their good fortune in obtaining so splendid a result from this important competition, and trust other competitors will do so.

As in all really great architecture, the plan, at first sight, appears so simple and direct a

solution of the problem that one might wonder that no other competitor thought of it, did a detailed examination reveal the masterly way in which the multifarious requirements have been met, everything being planned to come to its right place.

Although strictly complying with the spirit of the complicated directions of the assessors Mr. Webber has been inspired to produce a greater solution of the problem than even the assessors themselves could have thought of possible, while the manner in which the special requirements of the Manchester climate is provided for shows unusual planning skill.

While the design so aptly meets every practical requirement, its purely architectural beauty bid fair to rival St. George's Hall, Liverpool both for its dignified and monumental exterior and for its nobly designed interior, while the Hall of Memory with its fine enclosing area and its magnificent approach through the great Sculpture Hall, will be judged to be one of the worthiest memorials erected by any empire within the Empire to her fallen sons.

If any enquiry in connection with the competition is needed, I would suggest that "Critic" be asked to disclose his identity and the Institute should then enquire from him why its Council should not publicly reprimand him for unsportsmanlike and unprofessional conduct in raising doubts in the lay mind as to the propriety of carrying out a great design. The offence is aggravated by the fact that the design is the work of a young architect who one had never heard of until he sprang into prominence so brilliantly in this competition.

One can only hope that his work will be translated into splendid architecture without a dreary wait to dim his inspiration.

The Lord Mayor and Corporation, City of Manchester.

[The above letter is signed by the writer, but as his covering letter is anonymous we have deleted his name.—Ed.]

London Master Builders' Association Wage-Default Circulars.

SIR,—With reference to certain wage-default circulars and other communications referring to Bovis, Ltd., recently circulated by the London Master Builders' Association, should esteem it a great favour if you would permit us, as solicitors for Bovis, Ltd., to inform the recipients of such communications through the medium of your paper, that a writ for libel has been issued by us on behalf of Bovis, Ltd., against certain officers and members of the Council of the London Master Builders' Association in respect of the communications above referred to.

BARTLETT & GLUCKSTEIN.

SIR,—We think it may be of interest to your readers to know that we have to-day issued a writ on behalf of our clients, Messrs. Higginson Hill, Ltd., against certain officials and members of the London Master Builders' Association. This writ institutes an action whereby our clients seek to recover damages from the defendants for libel in respect of matter contained in certain circulars, letters and the like, published by or on behalf of the London Master Builders' Association in connection with the question of the payment of standard rate of wages.

BULL & BULL.

[We have called the attention of the London Master Builders' Association to these letters and are informed that the Association intend to defend these actions and has already given instructions to this end.—Ed.]

Mr. T. Raffles Davison's Work.

SIR,—I was very glad to read under the heading of your Notes, June 5, the proposal to publish a selection of Mr. T. Raffles Davison's sketches and drawings, and I should like to see my name amongst the subscribers. As I said in my speech at the annual general meeting of the R.I.B.A. on May 4 last, Mr. Raffles Davison has in drawing perspectives of our building strengthened our weaknesses and given dignity and proportion to the designs of busy architects who had the privilege of his assistance.

WM. WOODWARD.

(Correspondence continued on p. 99.)

PHILIP WEBB AND HIS WORK—VII

By W. R. LETHABY.

THEORY OF ARCHITECTURE

'Beauty lives with kindness.'

—Two Gentlemen of Verona.

Gradation.—At the same time, modern civilised work must be done with careful balancing of considerations. A letter written to Mr. F. A. White (in the 'eighties), following a conversation on the statues of London and the Wellington monument at Hyde Park Corner, puts on record, in regard to a particular case, some of his constant thoughts—the need for *Gradation of Parts*, contrast, and of "shading" different materials together.

"As the statue is necessarily small (comparatively) the thing to be done is to give it scale by contrast. There should be some foil to the size of the main object. Scale might be got in some such way as this: First, to give parts to the pedestal itself and then to give a broad enough base on the ground, and on it to set up the foils. You will probably have noticed that in the statues of horsemen, the pedestal when seen end-on looks very thin, unless made very wide and out of proportion to the horse. To get over this there should be lateral pilasters, as at A A [wide projections in the centre of the sides]. As the bronze of the statue would be darker than the stone, some bronze should be put into the pedestal. The cornice-frieze to the pedestal of Verrocchio's Colleoni at Venice has this frieze of bronze, and I noted the effect. I would make the Cornice C and the panels D [occupying the lateral breaks on the pedestal] of bronze; I would put four shafts at the corners of the plateau [on which the pedestal stands], making the shafts of granite and the capitals and finials of bronze. The finials themselves might represent England, Scotland, Ireland and Wales—symbolising the ashes of the different peoples on which the fame of the great man was built—and to them the national shields might be hung. The arms of Wales are to be found, and the Prince of Wales might like to recognise that valiant people by this sign."

As for *Decoration*, he agreed with Morris: 'Why should we trouble to have a pattern of any sort? I for one am dead against it unless the pattern is really beautiful; it is worthless if it is not. . . . Everyone of them must have a distinct idea; some beautiful piece of nature must have pressed itself on our notice so forcibly that we are quite full of it, and can, by submitting ourselves to the rules of art, express our pleasure to others and give them some of the keen delight that we ourselves have felt.' This principle, of course, applied to the higher forms of decoration, and other than this some simple modifications of surface and colour might be allowed as pleasant. Webb, indeed, got much out of simple modes of workmanship, masonry forms rather than carving, frets, and the like. He would insist that flat ornament should usually be "a pattern which turns the white ground into a mosaic-like pattern effective at a distance"—the spaces as well as the forms must come right. His higher decoration was founded directly on fresh study of nature—flowers, foliage, and living creatures.

For himself, Webb could not take refuge in bareness and baldness. He felt that to do this might be calling attention and might seem affected posing and advertising. A building was not to be noticeable by reason of its bareness nor by its elaboration; it was to be just good. "I never begin to be satisfied until my work looks commonplace." Still, sound building is the first necessity, and restraint is entirely right if it does not pass over into affectation. "Evasionist art" and a "Negationist style" were not final aims, although they might be necessary steps. He would tease me on evasion and negation, and then

add: "After all, it's quite right." In no sense, however, did he mean that any named "style" should be imitated. I have heard him speak of his early time as "my Gothic days," and once, on his having to add a wing to a modern house, he remarked: "I'll take the Renaissance out of it." His mind was set on forming a natural mode of modern building. "Common sense is our only ware." Webb in building, like Browning in poetry and Madox Brown in painting, was first of all a realist; but then he sought for the romantic and the poetic in the real.

Invention.—Where work is sound, competent and natural there will necessarily be a leaven of Invention keeping it sweet. An architect is properly an experimenter, developer, adapter—an inventor in building, not a supplier by rote of tired and stale grandeurs in the styles. "Oh dear me," says Webb, in a letter given further on, "is there any hope for invention?" And in another place I find the word "design" crossed out and *invention* substituted.

Commonplace and Common Sense.—Mr. Jack writes: 'He frequently impressed upon me the value of the Commonplace, and I think this was a keynote of his own development. The first "Clouds" design was very much more individualistic than the second. I remember one design he did for a house that was never built, wonderfully elaborate and interesting. As the days went on I found he had been using his india-rubber very freely, and he made the remark to me: "Whatever you do, cut out, cut out!" When designing patterns or animal subjects he had not the passionate directness of Morris, but he had what reached as high—a sure visual notion of the thing he wanted and untiring patience in finding his way to it. With unrelenting self-criticism he knew well when he had not got it—and so, no matter how plausible the result might be, his india-rubber settled the dispute, and at it again he went—Patience without this quality is a curse to designers. . . . He said that the ability to make picturesque sketches was a fatal gift to an architect. We could sometimes not get him to design the mouldings and things for which he had prepared drawings. We hit on the plan of putting them in ourselves and asking him if they would do—of course they would not do, and he himself immediately set to work. We sometimes ranged bits of rubber along the top! He was particularly fond of designing carpenter's work—so was I—we often had discussions and often got very hot over it—as he said, "like a couple of Clyde gulls." I used to make for this purpose elaborate little sketches of joints and framings, and Webb sometimes giped me for making another "Academy drawing."'

In his retirement he went on thinking of and trying to hope for improvement in the art of building. In a letter to me, dated 13th April, 1911, he says: "I have thought considerably of the prospect of finding a lift to the good in our business, and have had nothing for the sole of my mind to rest on—save Hope, with the roundest of O's. Truth-teller you are about the best work being done by a negative, anti-scrape." That is, we must begin again with zero and sense in doing beneficial work like that of the Society for the Protection of Ancient Buildings which is by far the best modern school of building we have.

To W. R. L., July 3, 1904: "I have no doubt whatever as to there being no prospect for coming architecture save in putting all the brains into simple but excellent building, fitting for the climate and other characteristic qualities of this garden-like country. Direct importation of other than such fittingness would—I truly believe—be but a further hindrance to any possible living architecture from the root up. I hold tenaciously that, at all times in England, when there was any art

worth considering, by its characteristic qualities it acclimatised its gains from other countries and held its own in all reasonable equality. For instance, I know of no scholarly example of the monumental renaissance to equal St. Paul's of Wren—which tells what I mean by insularising any imported motives. To my seeing there came a sea-change almost instantly on landing, to any fresh fashion adopted from elsewhere. I would not have had here the grandeur of French wonders at the expense of our own imaginative simplicity, holding, as I do, that the mixed races which we call English had imagination of a refined quality in all the arts when they *lived* at all. Even in our modern make-believers, Professor Cockerell's gallery building in Oxford expresses what I mean by imagination with graceful simplicity. . . . I say Yes as to a book on 'Modern Building Aims on Universal Principles: Walls, Arches, Vaults, etc.' . . . From what I could see in London, while there the other day, of works just done or in the doing, I was beaten down with its hopelessness in the way of invention."

It must have been mainly for discussion's sake, but it appears that I had raised the question whether our crafts might be improved by our bringing in small groups of workers from India, Persia and China to demonstrate what human workmanship was. He answered: "Greek workmen with Greek fire in their heads set a light to such stuff as burned wonderfully well from the sixth century to the fifteenth century in the Western world. Commerce in Europe has set fire to its stinking bituminous train, which is certainly burning up the arts of the East. . . . My most hopeful feeling would be that at all events no harm could be done by introducing some workmen from the East. . . . Would it not be possible to get two or three young art students to go out, say, for a year, and mix with the native at their crafts in India, Persia and China, meanwhile finding out the promising fellows to import. . . . Certainly from the East. In a curious way Kipling's rubbing shoulders with the East did give a kind of lift to the English in the literary line."

To W. R. L., April 8, 1904: "One may fall back on the half paradox that all styles, at one time in their life, had the Gothic strain in them, and with a 'sort' of truth; but W. M. did not care for paradox, and I don't like it so much as Bernard Shaw! Still, both of us can agree as to the effectiveness, *without* the 'overlay,' of the strong-hearted Bentley's interior of the Westminster church; but can we in these days call for it to be white-washed and left as it is?—which I should rejoice in seeing. . . . The suggestion of going once more to the "East" for inspiration seems to me a perilous thing to set down in a book, *now*. Even Blunt's Arab horses here, which I fondle with pleasure, are fittingly used as a change of strain, but the breed in its purity is only fit for the desert. If we could adopt an eastern strain, as Handel did an English strain of music in his German form, well and good; but he was a genius and thiefed unblushingly. The Flemings imported here began to transform their work to a fitting mixture with English ways, as the Dutch did with their admirable pottery in giving it a Chinese strain. Of course, there was W. M., who used any 'strain' which came through his wide knowledge of many ways and manners; but he, too, was a genius. He nearly burst himself on seeing his work taken to as the right thing for crazy folk."

Webb was a careful student of current contemporary work in the streets (not in illustrations!), watching buildings go up from the ground; being especially interested in the ground itself and the structural problem. The modern building with which he had most sympathy was the Roman Cathedral at Westminster, in which he saw general ideas and constructive power behind the overlay. He went over the building in progress, and Bentley must have known of his sympathy, for some time before he broke down he called

CORRESPONDENCE.

(Continued from page 96.)

Proposed Tudor Street, Kingston-upon-Hull.

SIR,—I have read with much interest the outline scheme of the Lord Mayor for the new street from the station to Beverley-road, printed in the *Hull Evening News*, of Monday, June 22, 1925. I have examined the reproduction of an illustration by C. W. English of the scheme in the *Eastern Morning News* for June 24, 1925.

With various slight mis-statements in the report and the obvious disagreement between the verbal report (June 22) and the illustration (June 24), I do not propose to deal. The scheme is, in my opinion, a desirable one in that it seeks to obtain coherence and uniformity in a new street, and the Lord Mayor should be congratulated upon his foresight. Unfortunately, it is in these very necessary elements of architectural excellence (coherence and uniformity), vitiated by that portion of clause (1), reading, "And the architecture shall be of Tudor style."

I desire to protest against this section of the report for the following reasons:—

(1) The Lord Mayor invites discussion.

(2) The Lord Mayor is not wedded to any particular style. (Other people may be.)

(3) Historical. "Tudor architecture is the style prevalent during the reigns of Henry VII, Henry VIII, Edward VI, and Mary, in which the influence of the Renaissance movement is noticeable, for it is the work of those trained in Gothic art, but probably under the direction of a designer familiar with the new features of the Renaissance, and in some examples the designs for details and mouldings would seem to have been made by a foreign artist." (Prof. Sir Banister Fletcher's "A History of Architecture," p. 356.)

Parker, in his "Introduction to Gothic Architecture," says, "Indeed, at that time, we find Italian features introduced, though sparingly, among the true Gothic."

I will not burden your columns with further neutral evidence, to suggest that the Tudor style represents a period of confused thought. The Tudor manifests the interference with artists by ignorant patrons of anything but art. It represents a germ in the body of healthy art; it is foreign.

The way they wrote in those days was like this: "Edward VI. tercio. Johis Henrison maioris . . . florasmoe as m walter jopson nowe alderman of this towne & late shereff of the same dydde nott in the tyme of his sherwike accordyng to the Kynge maiesties charter & dyvers," &c.

This specimen is taken from "Bench Book," No. 3, at our own Guildhall, Kingston-upon-Hull. Their architecture resembled their writing.

(4) Local tradition. Hull is a brick town, now a city, and has been throughout its history.

It is on a bed of brick clay. If in any doubt, go and inspect the Church of Holy Trinity, the Old Grammar School. Examine the old maps or, more reliably, peruse the "Bench Books" or the accounts of the Brickfields since 1303, which are yet available. Further, the old Guildhall in Trinity Churchyard was entirely (save for the stone windows) of brick. The contract can be read by persons sufficiently interested.

Despite the introduction of stone work recently, the tradition continued as long as tradition lasted. Most of the Trinity House Estate, in Whitefriargate, is evidence of this. I am aware that the "White Hart" and the demolished "King's Head," with some slight further remains in High-street, may be quoted as instances of timber construction.

(5) Practical. The period is full of incongruities. If reproduced with any fidelity (and if not fidelity, why pretend?), it will be found to be inconvenient, dangerous and costly. Moreover, because of the state of mental and civil confusion in which it was born a bastard, nothing about it is rational. Everything was in a state of flux, from the windows, the doors, up to the chimney stacks.

(6) Theoretical. That if the initiators of the suggestion of a Tudor revival will take the trouble to read any of the books on architecture, so liberally provided by the Hull Corporation at the Central Free Library, Albion-street, they are welcome to all the quotations they can find in favour of their proposal.

The writing of Mr. Trystan Edwards ("Good and Bad Manners in Architecture," "Things Which are Seen"), Mr. Manning Robertson ("Everyday Architecture"), Mr. Clough Williams-Ellis ("The Pleasures of Architecture"), Mr. Charles Marriott ("Modern Architecture"), Professor C. H. Reilly ("Some Architectural Problems of To-day," "Some Manchester Streets and Their Buildings"), Mr. Geoffrey Scott ("The Architecture of Humanism"), Professor Lethaby ("Form in Civilisation"), Mr. Frank Rutter ("The Poetry of Architecture"), are books by gentlemen who have devoted their time and pens to the subject during the last few years. They one and all protest against the absurd fallacy—that art is imitation—contained in the proposal. If the professional advisers of the Lord Mayor can produce a single authority who has written in the last twenty years in support of their Tudor revival, I should like to have his address, and I promise them I will read his book.

(7) Psychological. Its realisation is impossible. The mind of man is differently oriented in these days. Never in all history has a suggestion of the character of the Lord Mayor (the revival of a long obsolete manner) been executed—from Pericles to the Prince Regent.

(8) Personal. The function of an architect is as a practical artist; I consider it is an injury to attempt to force me to work in a manner so long dead.

Hull.

DUDLEY HARBON.

JOLDWYNDS, SURREY. By PHILIP WEBB.

on Webb to know if he might recommend him to be his successor "if anything happened," but Webb would not consent.

To E. C. L., January 11, 1902: ". . . An able man's work on a great scale, which work has evidently sapped his strength, and no wonder, more's the pity. My own particular admiration of Bentley's great work rests mainly on the splendid rashness of design in the inter-buttressing of the domes [as seen] looking across the nave; this can hardly be spoiled by the future decorative work; as the coupled arcading which steadies these emphatic piers will always give remarkable quality to the broad area of the nave."

To W. R. L., August 28, 1905: ". . . When coming through London, on the way from Winchester, I looked in for an hour on Bentley's church. It touched me sharply, he being gone, that I could not tell him what came over me while looking at the outcome of this last living force of his life's efforts. Here, to speak as a hod-man in that way, Bentley's doubling of the spaces between his width of domed-bays was a triumph. As they stand—these long shanks under the main semi-circle—they are the making of the inside effect of the church. Even if the finishing work to be done on the surface be too inferior, it can hardly kill the effect of the great skeleton."

By comparing what I have observed of Webb's work with what I suppose was the drift of his teaching, his more technical aims in architecture, beyond the general bases already discussed, might be suggested, if not fully expressed, under such headings as: Order, Idea, Scheme, Structure; Effectiveness, Emphasis, and Contrast of Big and Small, 'Foils'; Change of Line, Diagonals and Curves; Some Variation of Colour; Purpose and Character in Mouldings—in which, as Mr. Jack says, he thought more of the stone than the section; Expression of Energy; Intellect and Intelligibility; Pleasure to the Worker.

It may, of course, be recognised that the modern city practice of an architect, with its complexities, necessarily tends towards the lawyer's model of dealing with documents and legal precedents, but some way of maintaining contact with the basis of building must be found. Whenever, if ever, the art of building becomes real again it will be refounded on delight in structure, knowledge of materials, practice of craftsmanship, and the impulse towards experiment and invention. There are two ways in building—sound work based on craft power or "style design"—the Webb way; or the Win-competition-quick way. If any young student should feel confused at the war of voices, I would say—Learn what is taught in the schools while there are schools and you have to go to them; but, as much as you can outside, learn about building and craftsmanship. The building architect must pound his designing first of all on a practical knowledge of a craft; to this he should add mechanics and planning and sanitation, and he rest; but he must begin with some contact with solid materials and actual work. He should direct his mind to structure rather than to style.

Secondly, he must design work suitable for our modern heartless ways of "execution" where he cannot call in special craftsmen and give them their liberty. Thirdly, so far as possible, he must aim at putting all decorative work into the hands of free artists: 'ornament' which is not the work of free masters what Webb called "slavery."

Mesopotamian Travelling Studentship.

To assist the archaeological work which has been undertaken by Mr. Leonard Woolley at Ur in Mesopotamia, the R.I.B.A. has opened a fund to provide the sum of £400 for an R.I.B.A. Travelling Studentship, to enable a young architect to accompany Mr. Woolley on his excavations. The sum of 40 guineas has already been received by the Institute from Mr. F. Halstead Best, and the secretary will be glad to receive any further contributions.

The British Medical Association Building.

We illustrate this week the new headquarters of the British Medical Association in Tavistock-square, London, recently acquired by the Association as an unfinished building, intended for the Theosophical Society, and designed by Sir Edwin Lutyens, R.A. Built of red brick and Portland stone, the building in its present form surrounds three sides of a quadrangle, or "Court of Honour," measuring 100 ft. by 90 ft., with a 54 ft. circular grass plot, with a stone kerbing, in the middle. This court is separated from the Tavistock-square approach by a wrought-iron screen, with three gates. Over the central gate is the badge of the Association, the twined serpents of Æsculapius, gilded, with below it shields bearing the dedication to medical officers who fell in the war. At present the ends of the two wings of the building are temporarily finished with hanging tiles, but they will ultimately be extended to enclose an outer court, with, probably, an arched entrance from Tavistock-square.

The three elevations fronting the quadrangle have stone basement storeys, each pierced with five round-arched openings, the superstructure being brick, the windows on the first floor having alternately round and triangular pediments. The central portion is broken by a pediment, supported by three-quarter Corinthian columns in four pairs, the line of its architrave being continued round the wings by a shallow stone cornice, binding the composition together, with an attic storey above. From the quad-

rangle there is a vaulted passage, opening right and left into the members' lounge and the library of the Association, to Burton-street.

The principal features of the interior are the Great Hall, 120 ft. by 60 ft., occupying the whole upper part of the central portion, and the Council Room and Hastings Hall—named after the founder of the Association—in the south and north wings respectively. The two ends of the Great Hall are barrel vaulted, over the dais or platform and listening gallery, but the middle portion of five bays has an open timber roof, coloured a dark, atmospheric, blue-green, so that the eye continues the vaulting treatment by resting upon the gilt-steel arches which spring from Corinthian columns of lapis-lazuli blue. On each side of the hall there is a passage gallery with an open balustrade. Under the galleries are hung the banners of the provincial branches of the Association, and in the "nave" are the flags of the Colonies. At the top of the white panelling surrounding the hall there is a line of 69 circular black panels, which will in time bear portraits of eminent members. By means of a crane arrangement the floor of the hall can be quickly cleared of chairs by lifting them into the galleries, thus leaving the space available for dancing.

The Council Room and Hastings Hall, in the wings, are semi-basement rooms; that is to say, half of them lies below the sills of the round-arched windows opening into the quadrangle. The Council Room is lined with wooden panelling adapted from the old building in Agar-street, Strand, as is the woodwork in the library, but the walls of the Hastings Hall—as are most of the walls of the building—are plaster panelled finished in stippled paint of a vellum tint. In the Committee Room, which is above the Council Room, and is entered from the Great Hall, the finish is green, with incised borders to the panels with a white inlay. Outside this wing and overlooked by the Committee Room, there is a garden with a semi-circular terrace and an oval pool, on the site of a house formerly occupied by Charles Dickens, the corresponding space outside the north wing being taken up by garages.

The general contractors were Messrs. Ford & Walton, Ltd., and Messrs. Hampton & Sons. The following were sub-contractors:—Stone work, Nine Elms Stone Co.; electrical, Higgins & Griffiths, Ltd.; hot water and gas, Richard Crittall & Co., Ltd.; memorial gates, Birmingham Guild; sanitary fittings, John Bolding & Sons, Ltd.; slating, Roberts, Adlard & Co.; rubber floors, Leyland and Birmingham Co., Ltd.; parquet floors, Stevens & Adams, Ltd.; copper glazing, G. Barrett; lifts, Waygood-Otis, Ltd.; steelwork, Redpath, Brown & Co., Ltd.; general ironwork, Thomas Elsley, Ltd.; bronze

metal, Morris & Co.; flag staffs, Dyne & Evans; door springs, Jas. Adams & Son, Ltd.; locks, &c., J. Kaye & Sons, Ltd.; bronze handrails, Carter & Aynsley, Ltd.; tar macadam, Constable Hart & Co., Ltd.; collapsible gates, Bostwick Gate and Shutter Co., Ltd.; strong rooms, Chatwood Safe Co., Ltd. Mr. G. E. Staples was general foreman, and Mr. P. J. Patmore clerk of works.

The Henry Jarvis Studentship.

We illustrate this week the successful design for the Henry Jarvis Studentship, 1925, by Mr. C. A. Minoprio, a fifth-year student of Liverpool University. The Rome Scholarship design, by Mr. G. A. Butling, was given last week.

Recent Commercial Architecture in Newcastle.

We publish in connection with our report of last week's Conference of British Architects, an example of recent commercial architecture in Newcastle which was unavoidably held over from our last issue. Messrs. Marshall & Tweedy, F.F.R.I.B.A., are the architects.

Newcastle Development Scheme.

We publish this week the plan of a series of street improvements for Newcastle-upon-Tyne, suggested by Mr. R. Burns Dick, F.R.I.B.A. These improvements relate to the lay-out of the centre of the city and are considered necessary to meet existing and future traffic problems. The plan embodies suggestions by Mr. W. T. Jones, F.S.A., Past President of the Northern Architectural Assoc., Major W. J. Steele, and others, and has been submitted to the members of the Town Improvement Committee as a possible basis for the preparation of a definite and considered plan to which all future development should conform. The plan is of special interest at this moment, in view of the fact that Newcastle City Council on Tuesday last approved the new street marked No. 3 (running from City-road to Barras Bridge).

This road (it is stated in Mr. Burns Dick's report) is considered essential to the efficiency of the Bridge-square. It would run north parallel to Pilgrim-street, would still further relieve Pilgrim-street from part of the traffic from the Quay and City-road, and, above all, from the through traffic that will become a feature on the great North and South-road. By fulfilling this very important function the chief adverse criticism that has been levelled at the adopted position of the bridge would become invalid. It would also obviate the immediate necessity for widening Pilgrim-street, a very costly undertaking. The road would fulfil another highly essential function, inasmuch as it would make possible the proper development of a large area which has long been crying out for treatment because of its natural position for city expansion. The road should be at least eighty feet wide, and should be conceived in the spirit that actuated the great master builder Grainger. It is laid out so as to skirt the west side of the Public Library, where it crosses New Bridge-street and also to the west of the site of the new concert hall and baths. Northumberland-road, emerging into Barras Bridge, so that the vista will be closed by the facade of the Museum. About half-way up that is, between Market-street and New Bridge-street—an increase of width is shown to provide for a centre for the handling of tram or bus traffic in substitution for that at the foot of Northumberland-street. The slight bends at the rising gradient would make possible a street rivaling Grey-street in impressiveness, but with incomparable advantages over Grainger's masterpiece at both its extremities.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS' CONFERENCE AT NEWCASTLE-UPON-TYNE

THE unity of the architectural profession, which has at last been achieved by the amalgamation of the Society of Architects with the Royal Institute of British Architects, has given added importance to the deliberations of British architects, and a sense of the influence which the R.I.B.A. should now exercise upon public opinion no doubt had much to do with the arrangements which were made for the annual Conference which has just been so successfully concluded at Newcastle-upon-Tyne. Never, surely, was a conference better organised, and never were arrangements more efficiently carried out; and with ideal weather and a full programme for the instruction and pleasure of the members, the meeting will be long remembered by those who were fortunate enough to take part in it. This, we believe, would be the unanimous opinion of the members, and the many vocal expressions of thanks to Mr. R. Norman MacKellar, the energetic and courteous Conference Hon. Secretary, Mr. W. T. Jones, Colonel G. Reavell, O.B.E., President of the Northern A.A., Mr. T. R. Milburn, V.P.R.I.B.A., Mr. C. S. Errington, Mr. L. W. Taylor, and a very able committee, afforded some indication of the success of the meeting and the sense of obligation to this enthusiastic body of workers under which the Conference was placed. The fact that the Institute now represents over 10,000 British architects must have had something to do with the generous hospitality and kindness of the civic authorities and, perhaps, the beflagged headquarters at the Old Assembly Rooms in Westgate-road, with the inscribed banner indicating in no uncertain way that a Conference of the Royal Institute of British Architects was being held in the city. And we wonder whether any President of the Institute has ever before been received with such welcome by a provincial gathering as was accorded Mr. Guy Dawber at the smoking concert given by the Northern Architectural Association in the charming rooms at headquarters; and we doubt whether any President could have more worthily upheld the dignity of his position. It is true Mrs. Dawber was by his side—as she was at all the many functions of the Conference—but unusual courage is needed to face the loud hurrahs of a crowded and upstanding gathering who set the seal upon their good will with an enthusiasm which was to be the note all through the Conference. But architects are accustomed by their calling to face all emergencies, as we saw at the banquet on Friday, when Mr. Harvey W. Corbett, of New York, responded to a spontaneous call for an impromptu speech and showed his appreciation of the whole-hearted good will indicated by the incident. This good will was contagious, and for once in a way everyone appeared to be in agreement with everyone else. At all events, no one had any doubt about the wonderful sword dancers at the smoking concert, or the excellence of the local character songs, or the music of Mr. Fenwick's orchestra, and last, but not least, the very pleasing nature of the presentation to Mr. MacAlister, the Secretary of the R.I.B.A., and his appropriate little speech in thanks; and the only regret—and it was surely quite right that there should be this regret—was that some members of the Institute had not known of the presentation and were not associated with it from the beginning.

What may be called the business part of the Conference took place the following morning, when Sir Theodore Morison delivered an address on "Architects and the Public," which raised some important issues, the discussion on which did not end with the sitting. Many opportunities were afforded not only of discussing with friends of long standing and the new friends who are found on these occa-

sions the many questions concerning the profession, but of city problems, such as the proposed new street which it is hoped will be constructed in Newcastle, and it was not difficult to realise that there is a growing civic spirit in the city.

The proceedings of the Conference are reported in the following pages, from which it will be realised how varied was the programme and how many opportunities there were for enjoyment and the acquisition of knowledge. No one who took part in the trip down the river to Tynemouth Priory and Seaton Delaval Hall, to the beautiful grounds at Jesmond Dene, to Durham Cathedral and Castle, to Alnwick Castle, Craggside and Rothbury, and to the Roman Wall and Hexham Abbey, could have failed to find time passing all too quickly and to regret the end of the Conference when it came.

The inaugural proceedings of the 1925 Conference of the British Architects at Newcastle-upon-Tyne took the form of a smoking concert at the Old Assembly Rooms on Wednesday evening, July 8, as a preliminary to the more serious business which brought members from all parts of the country to the famous northern city. It also afforded the members the opportunity of renewing old acquaintanceships and of establishing new friendships.

Thanks to the efforts of the Northern Architectural Association, the welcome accorded the visitors was characteristically hearty, as one might expect in the northern province.

The President of the Northern Architectural Association, Colonel G. Reavell, O.B.E., was there to give the members of the Conference and their ladies the most cordial welcome. With him were the members of the Local Conference Committee, with Mr. R. Norman MacKellar as the ubiquitous and courteous honorary secretary. A concert was then given under the direction of Mr. Lee Dixon, arranged by the Conference Entertainments Committee.

The arrival of the President of the Royal Institute of British Architects, Mr. E. Guy Dawber, F.S.A., and his wife, was greeted with musical honours.

During a pause in the musical programme the opportunity was taken to present to Mr. Ian MacAlister, the Secretary of the Institute, a gold watch, accompanied by a substantial cheque, in recognition of the eminent services he has rendered both to the profession and the Institute as Secretary. In making the presentation, Mr. T. R. Milburn, V.P.R.I.B.A., having referred to the fact that Mr. Buckland had done a great deal of the work in connection with the testimonial, said he had been connected so long with the Royal Institute that he could remember no fewer than three secretaries—Mr. W. H. White, Mr. W. J. Locke, and lastly, Mr. MacAlister. The work of the Royal Institute had increased enormously during the last few years, and no one who was not a member of the London Council could possibly have any conception of the enormous amount of work which fell upon the shoulders of the Secretary. The meetings of the Council were fortnightly, and this involved constant work, and in addition there were the elections, and, above all, the great question which had been agitating their minds for so many years, the question of Registration. All these matters meant a tremendous amount of work for a secretary. Apart altogether from that, there was the question of Mr. MacAlister's geniality. Mr. MacAlister was very popular, and deservedly so; a man might have all the necessary and admirable attributes of a business life, and be what was termed quite a good man—but there was something beyond that, and that was affection. Apart from the work which Mr. MacAlister

had done and was doing, all the members had an affection for him, and it was no exaggeration to say that Mr. MacAlister was loved by all the members of the Royal Institute. In addition to all the work thrown upon him, Mr. MacAlister had, during the past few years, devoted himself to the problem of the unification of the Allied Societies with the Royal Institute. Some years ago, when the Allied Societies went to London, they were not in as strong favour as they were now; the London men now welcomed them and were ever ready to help them in every possible way, and a great deal of that bringing together into closer association had been due to the work of Mr. MacAlister. All these things combined had culminated in the recognition which they were making that night of the services which Mr. MacAlister had so splendidly and unselfishly rendered to the Royal Institute in particular and to the profession in general.

"It is my great pleasure and privilege," concluded Mr. Milburn, "to ask your acceptance, Mr. MacAlister, of this gold watch and accompanying cheque as a mark of the esteem and affection which we all have for you personally, and of our appreciation of the eminent services which you have rendered to the Royal Institute. The cheque does not in any way represent all your worthiness. Ten thousand pounds would not be sufficient to recognise all you have done, but I know that you will regard this testimonial as the heartfelt expression of our affection for you and as a symbol that we are not unmindful of all you have done for us."

The watch bore the following inscription: "To Ian MacAlister, from the Societies allied to the R.I.B.A., in grateful recognition of his unflinching courtesy and devotion to their interests. July, 1925."

Mr. Herbert T. Buckland, as one who had taken a little part, as he described it, in getting together the subscriptions for the testimonial, said the inception of the idea was not his but that of Mr. Thomas, that the services of Mr. MacAlister should be recognised in some tangible form, and when the suggestion was made there was not a man in the room at which the decision was come to who did not feel like kicking himself because he had not been the first to make the suggestion. Mr. Buckland added that the collection of the subscriptions was a matter of the utmost ease; in fact, when the members were written to, cheques literally tumbled in, and that was the best possible evidence they could have of the popularity of the recipient of the testimonial.

Amidst loud applause and the singing of "For he's a jolly good fellow," Mr. Milburn handed the dual testimonial to Mr. MacAlister.

Mr. MacAlister, in reply, said it was exceedingly difficult for him to express adequately his thanks for their most generous present, which was far more than he deserved. He felt that he was but a symbol of a great many other men. The work which Mr. Milburn had described so clearly had been going on for some years, and the credit of it was due to certainly not less than a hundred members, Past Presidents, Vice-Presidents, Honorary Secretaries, and others. It happened to be his fortunate lot to be there on the spot at the psychological moment, but they must realise that the result which had been achieved could not have been obtained without the devoted self-sacrifice and the united efforts of others. The work had required and obtained a great deal of unselfish labour, and for himself he was lucky enough to be there at the fruition of all that labour. He rather thought his friends had taken an exaggerated view of what he had been able to accomplish. All through, it had been an intense pleasure to him to do

that which he had been able to do, more particularly because the result which had been achieved would be of permanent value, and it was a great pleasure to see the matter clinched in the past year. For himself, he might say that as the result of this coming together there was not a town in the country into which he might go without finding friends there. In conclusion, Mr. MacAlister reiterated his heartfelt thanks to all who had so generously recognised any services he had been able to perform.

Mr. E. Guy Dawber said that as President of the Royal Institute of British Architects he would like to add his heartiest congratulations to Mr. MacAlister on the recognition which had been made of his invaluable services. "Every word that has been said about him," proceeded the President, "is true. His geniality and kindness and readiness to help any one of us in difficulty without exception is known to us all, and it is a very great pleasure to those members of the Institute who know him and what he has done to see this generous recognition of his work and ability."

Finally the President voiced the cordial and grateful thanks of the guests of the evening to the President and Members of the Council of the Northern Architectural Association, not only for the most delightful entertainment they had given them, but for their cordial welcome. He could assure them, said Mr. Dawber, that they very greatly appreciated it, and they wanted to thank particularly the Members of the Executive Council for having arranged such a delightful programme. He found, he continued, on looking at their Calendar, that with the exception of Liverpool the Northern Architectural Association was the oldest in the country, and though old in years it was in no way senile, and it had given the profession some of the best men from the provinces who had done most delightful work in all parts of the country. He was glad to see, also, that the Northern Association had lately enlarged its sphere of action and had established branches so as to enable members who lived in distant parts of the county, and were unable thereby to join the parent centre, to keep in touch with them just the same as their Allied Societies were with them, and if they could only establish these branches in various parts of the country it would all help to encourage and foster the position of the profession in those particular districts.

Mr. Herbert T. Buckland formally seconded the vote of thanks.

Colonel Reavell, on behalf of his Association and Council, acknowledged the vote of thanks, pointing out that they had with them visitors from all parts of the country, one from the United States of America, Mr. Corbett, and visitors from Australia and South Africa.

The Inaugural Meeting.

The inaugural meeting of the Conference on Thursday was held in the Old Assembly Rooms. After the President, Mr. E. Guy Dawber, P.R.I.B.A., F.S.A., had officially welcomed the Members of the Conference, Sir Theodore Morison, K.C.S.I., K.C.I.E., C.B.E., M.A., Vice-Chancellor of the University of Durham, delivered an address on "Architects and the Public." They were, he said, in a neighbourhood which has a long architectural history. From Newcastle they might visit the remains of the Great Wall which marked the farthest confines of the Roman Empire; they might inspect the site of the rude cell in which St. Cuthbert kept alight the lamp of Christianity on the Farne Islands, still a sanctuary indeed, but consecrated now to the puffen and the gillmot, and other nesting sea birds. Near to the south was that noble Cathedral which Professor Prentout, who filled the Chair of Norman History at the University of Caen, presented to his pupils as the finest specimen of Norman architecture. By the railway station they had already noticed the historic Keep from which the town took its name, and in their streets and upon the quays they would find here and there other

traces of the Middle Ages: a Friary sadly fallen from its original splendour and houses of the Guilds which once controlled the commerce and industry of the Tyne. But these they would have to hunt for, because the flood of modern industrialism has partially submerged these landmarks of history.

A modern industrial city presented to architects some difficult problems. They must all acknowledge that the cities which they owed to the Industrial Revolution were sadly lacking in beauty. The age which gave man unexampled control over the forces of nature, which supplied architects with an embarrassing wealth of building material and possibilities of construction hitherto unimagined, contributed nothing to the charm of their cities. On the contrary, it has made most of them little better than grimy workshops from which the wealthier inhabitants hastened to get away. Why this lack of charm in modern towns? Was modern industry incompatible with beauty? These were the questions which he thought architects and the public might discuss together with advantage. He was not going to lure them into a discussion on town planning. Let it be agreed that we were suffering in part from remediable evils; that our towns might be laid out much more wisely, that smoke need not pollute our atmosphere; let them assume that a wiser generation than theirs would act instead of grumbling and build clean and spacious towns. Nor was he going to ask them to consider how they could improve the humbler quarters of the town—those "drab, unlovely streets" in which the working classes were doomed to live. He wanted to concentrate attention upon a socially less important problem which concerned architects more nearly. The ugliness of which he complained was that in our principal thoroughfares, in the pretentious quarter of the city which paid high rates, and in which land was bought by the foot. Here should be the buildings which they showed to their visitors with pride as the ornament of the city, yet this was the very quarter in which their failure was most apparent. He spoke as a representative of the public, and would begin by admitting frankly that for the want of beauty in their main thoroughfares the public, their clients, must bear the greater part of the blame. To his mind the main fault of our modern streets was the want of harmonious design; taken separately, many of the buildings were well enough, but each of them, in too many towns, was of a different height and in a different style, and the effect of all together was nothing but discord. The street, not the single house, should be the unit of urban building, and the street should be planned as an architectural whole; each building in it should be in harmony with the general design and should contribute to its realisation. Our streets were a riot of individualism; each owner had indulged his particular taste or fancy; very often his object had apparently been to be as bizarre and unlike his neighbours as possible. In one of the busiest thoroughfares of Newcastle he had counted in one block as many as eight different heights from the pavement to the parapet; it was not a street at all, but a jumble of oddly assorted houses. In the past the prevalence of a great tradition, or possibly the authority of the architect, was strong enough to curb the exuberant fancy of the private owner, and an architectural policy was followed in the construction of our streets. To this we owed the quiet dignity of Bath and the stateliness of the New Town of Edinburgh, and to his mind the merit of the Rue Castiglione and the Place Vendôme, to take only one example from this quarter of Paris, was due more to the design of the street than to the excellence of the individual buildings.

How could we get back to that better tradition? How do we persuade the individual to subordinate his fancy to a general design? To educate the whole public would be a long business, and might well fill one with despair. But their task was not really so serious as that. The people we wanted to influence were

neither very numerous nor very hard to convince. They were the owners of house property in the shopping quarter; in most cases they belonged to that part of the commercial community which was engaged in retail trade. They were keenly alive to the importance of making their property attractive, and they were not likely to be indifferent to argument. For, in brief, what we had to say was this: "The shopping quarter ought to be the most delightful part of the town; it should be so pleasant that people would wander there for the mere pleasure of beholding it even when they did not propose to make purchases. And if you, the shop owners, will adopt our architectural policy we will make it a joy to go shopping." And, indeed, it was not fantastical to say that a beautiful aspect was a necessity for a shopping quarter. It was the incomparable view of Edinburgh Castle which had turned Princes-street into an uninterrupted line of shops; the Rue de Rivoli possessed not only architectural dignity but the view of the Louvre and the Tuilleries Gardens. Shops were beginning to invade the Place Vendôme as well as St. James's-square. He thought we did not need to insist that good architecture paid the shopkeeper; he (the shopkeeper) knew it already. What he failed to grasp, however, was that he could not get full value for his expenditure unless he submitted to a general design. A special effort would, the speaker believed, be needed to bring this point of view before the commercial community; we might assume, he supposed, that they do not read the architectural magazines with any regularity. An occasional article in the R.I.B.A. journal would not, therefore, effect much. He suggested that the proper course was that some distinguished architect, who was filled with zeal for the improvement of his city, should approach one or other of the professional societies into which the commercial community was organised, that they were in the habit of meeting in such societies to discuss their common interests and he did not believe they would be indifferent to a well-considered appeal to adopt a common policy with regard to building.

But if they were prepared to make an appeal to the commercial public, might he venture to suggest that they themselves must be prepared to make some concessions to the necessities of this commercial age? In the modern world advertising was a necessity, and they would not make much impression upon men of business unless they frankly recognised that fact. In the past a too fastidious taste had prevented them from taking account of advertising. They had allowed advertising to fall into other less skilful hands. For their neglect they had paid a heavy penalty, for their noblest buildings had been defaced by monstrous gold letters which outraged the symmetry on which they spent so much thought. He hoped he would not offend the high-browed if he said that in the elevation of a commercial building they must take account of the need for publicity and make the inevitable lettering a part of their design. There was no reason why lettering should not be brought into harmony with architectural form and at the same time arrest the attention of the passer-by. In the East lettering was the most conspicuous and most beautiful decoration at the disposal of the Islamic architect. What could be more decorative than the verses of the Koran sculptured on a mosque? The majestic gateway of the Taj at Agra was covered with noble Arabic characters, and the chief ornament upon the tomb itself was to be found in the sacred texts inlaid in black marble; so highly did the Muhammadans prize this form of ornamentation that famous calligraphists were brought all the way from Shiraz to design the inscription upon the Taj.

He was convinced that lettering could not only be brought into harmony with an architectural design, but could add to its beauty. No doubt they were all painfully familiar with the harm done to noble buildings by the unskilful advertiser. If you were not, a wa-

down one of the chief shopping streets of Newcastle would show how completely his tasteless signs could ruin a good thoroughfare. But this was not the end of the tale of woe. The disfigurement of our streets by day was bad enough, but what invective could adequately stigmatise the advertisements of flashing light which made the night hideous? And for this he ventured to take the architectural profession seriously to task. Was ever so great an opportunity missed! Had architects taken charge of this new method of publicity they might have made even our modern cities beautiful at night. The illumination of a building could very easily produce a charming effect. Of that also he could vouch from Indian experience. In all the world there was no prettier festival than the Diwali, the feast of lamps. As soon as the sun had set little lights began to glow on the parapet and along all the cornices of every Hindu house; every architectural feature was lit up so that the whole building was outlined in light. This fairy decoration, which he never saw without delight, was produced by the crudest means, merely a wick stuck into a rough clay saucer of oil, but the charm of it was beyond description. Why should we not produce the same effect? Our resources were immeasurably greater than those of Indian villagers, and there was a strong economic motive for making a shop, a restaurant, or a cinema palace so beautiful that people would flock to see it. One attempt to make use of light as part of the normal decoration of a building at night he had seen recently in London—in the large Lyons restaurant at the top of the Haymarket. He thought the effect very attractive, but had had no opportunity of examining it closely. He saw enough, however, to convince him that the illumination was part of the architect's design, and to make him hope that other architects would make similar experiments.

The two points that he wished to make were these: we must, firstly, persuade the owners of property in our shopping quarters that harmony of design was essential to the beauty of a street and that they must, therefore, agree, jointly and severally, to pursue one architectural policy. Secondly, the architects who designed the elevations of mercantile buildings must make provision for publicity both by day and by night. If we could have our way on these two points he believed that we could make the opulent quarters of our industrial towns pleasant and beautiful. He was sure that our architects in modern England were capable of designing streets which it would be a pleasure to walk in and a joy to behold. He thought the modern shop contained a great many elements of artistic pleasure which well deserved a noble setting. An unhealthy lite-

rary romanticism had made us believe that modern things were always vulgar and ugly. This was absurdly untrue; if we would only trust the evidence of our senses and not call to mind what we had read about art we should see that a shop window containing, say, a lady's hat and parasol might be a very pretty thing, and that the ties, socks, and fancy shirts of a modern hosiery present a feast of colour quite as rich as the carpets and shawls of an Oriental bazaar.

He believed if we could once show the public how beauty could be achieved in certain streets they would quickly adapt the principle in other areas. How to make the dwellings of working men more cheerful and more healthy was a larger and more serious problem, with which he did not venture to deal; that was not primarily a problem for architects, but for local authorities and the Ministry of Health; to deal with it would require consideration of national finance and economic policy.

MR. HARVEY CORBETT, proposing a vote of thanks, said he felt that if Sir Theodore Morison found the need of such modifications and changes as he had found in Newcastle, he was glad that he (Sir Theodore) had not visited New York. He (the speaker) came to London and to Newcastle with a great feeling of relief because of the uniform height of the buildings. London, for example, which he happened to know better than Newcastle, was like a beautiful rug, in which there are a variety of colours, but which all seemed to blend in a harmonious whole. If they went to New York they would see buildings of from four to forty stories alongside one another; and if Sir Theodore saw that he would feel that they needed his advice over the other side more than we did here.

MR. ARTHUR KEEN, in seconding the motion, said they all had the feeling that if the general public were all like-minded as Sir Theodore their task as architects would be made very easy. The question of control and freedom of any of our acts seemed to him to be extraordinarily interesting. They all recognised that whilst freedom must be exercised with moderation in these days, the control to which they had to agree was rather more than they cared for. That control was not always exercised with that judgment which they might expect, and therefore it was not an unmixed blessing in that respect. They had had an example in London in Kingsway and Aldwych and Regent-street, in which the architects had had to submit to a very considerable amount of control, and one could not conscientiously say that the result had been all that one might have wished. If the control in regard to Regent-street had been exercised as it might have, it would have been a distinguished

success, but now he was very much afraid it was a failure. He felt that our problem was to find out how that control could be exercised in the most useful way, and that was a matter in which those engaged in town planning were particularly interested, and it might be that when the proper control in regard to buildings came to be exercised in a proper manner it would result in the general advantage of the public.

MR. WILLIAM WOODWARD said he was peculiarly struck by the advertisements on the domestic and business premises of Newcastle. He was accustomed to London, and had in his mind one or two streets in London which showed signs of vulgar advertisement; but Newcastle was worse. Not only were the advertisements horizontal and vertical, they were diagonal as well. He agreed with the lecturer when he said that it is within the province of architects so to design their buildings having regard to the fact that their clients must have advertisements, and he was sure that they could so design their buildings that there should be none of the vulgarity to which he referred. With regard to uniformity, Baron Haussmann in the days of the third Napoleon in Paris secured uniformity, and that was because the French designers as a whole, unlike English men and women, had a particular taste for colour. The Strand was by no means an example of architectural uniformity, but it was a pleasure to look at, and he confessed that he preferred the divergence in style in the Strand to that of some of the thoroughfares where a decided uniformity on lines of horizontal cornices obtained. To his mind Newcastle was cleaner than some parts of London even. They could not help Newcastle being black, but if they cleaned it tomorrow it would be black again. All the same, Newcastle was a city worthy of their greatest admiration. The room they were then in and the surrounding rooms formed one of the architectural beauties of the country.

PROFESSOR S. D. ADSHEAD said he must say a few words with regard to a subject which had been touched upon by Sir Theodore, and that was town planning. He had attended two addresses by eminent speakers that week, and they set out to discuss the question relating to architecture, and both of them seemed to have resolved themselves into considering the question of the decoration of a city. It just showed how very important the question of the architecture was becoming, and he thought it would ultimately lead to a solution of some of the greatest difficulties in the sphere of the architect. There was the general question of traffic control, a question which we should not solve to-day, though we should in a few years. We had, of course, great examples of traffic

Group Photograph taken outside the Old Assembly Rooms, Newcastle.

control. Kingsway to his mind was well controlled, and in all cases control by the local authority, elected by the people, should be responsible, and in that way he thought a very helpful result could be achieved. We had yet to work out our own salvation, not by wrestling with impossibilities, but with a new sort of control which would support the local authorities in their efforts to regulate matters in regard to town planning. We had real power to-day; it was, perhaps, not generally known that under the Town Planning Act we had absolute control over the height of the building, and, most important of all, the character of the building, but there was no definition as to what character was. They could have control over the elevation, and if necessary under the Act this matter of elevation could be submitted to the local authority, and it could also be referred to the President of the Royal Institute of British Architects, if necessary. He thought the Royal Institute had been a little remiss in not seeing that certain clauses were incorporated in the Act. This question of control and character should be developed, and their great care should be that it was exercised with the care and responsibility which it involved.

A DELEGATE from India said Sir Theodore Morison had made what they would probably find was a very valuable suggestion with regard to the lettering upon buildings, and he referred especially to the lettering on the Taj in

India. With the greatest possible diffidence he would enter a caveat here, and issue a word of warning in this way; all this lettering on Mohammedan buildings like the Taj, or nearly all of it, was taken from the Koran, or something of that sort, and was put there, he might say, to the glory of God. When they considered the lettering put on buildings to the glory of Mammon by devotees who from time to time offered at that shrine from different points of view, the control of this might be accompanied by difficulties greater than at first appeared. Sir Theodore referred to the illumination of the houses in India at night, and he was speaking now more particularly of Calcutta, where the house architecture was not architecture at all. The houses were merely boxes of square design, and the effectiveness of the illumination was brought out by the square building. The outlines formed by these lights were extremely beautiful, and in that case the illumination hid the architectural defects.

MAJOR HARRY BARNES said there was always before them the controversy between uniformity and variety, and between the imposition by some superior person or body upon their artistic conception of a scheme spread over a very considerable area of land and buildings, and the treatment of all the separate parts by individuals who were designers, and built according to their particular taste. In this country we had always had difficulties in

imposing upon the citizens of this country any sort of a cut and dried plan for building. The failure in Kingsway and Regent-street in London might be laid down to the same cause. As long as we in this country went on selling parcels of land to separate individuals, and as long as we lay upon them the burden of their own buildings, they wanted to have their say in the kind of building put up and the design of it, so as to fit in with their own particular fads. It was an extraordinarily difficult thing to control plans. As long as they had architects at all, he did not know that they would not have this individualism in their buildings. After all, if an architect got a commission, and said, "Here is a piece of land, and I will put up a building on it," he looked upon it as something on which he wanted to express himself and to carry out in it the ideas that were in his mind, and he (the speaker) thought there ought to be a very considerable body of resistance on the part of architects to being controlled to any great extent by a general plan. In London they came across places where streets were designed from end to end by one man, and if it was well done it was quite all right. They might go to some other place and come across a meandering, winding mediæval street, and at every turn they would get a view which they never expected to see, and would say: "How beautiful! Cannot we have more of this?" He was not very hopeful that we were going to see any great advance in the direction of uniformity for a very long time. He was wondering whether it was necessary, because in one case in some old town or village which has not been spoiled by industrialism they would find streets and series of buildings in which the mediæval architects just let themselves go according to their particular fancy, and the whole effect was perfectly delightful and charming. It was chaos, perhaps, but if they took them together they would not alter a single stone of them. With regard to the question of advertising on buildings, the difficulty there was not only as regards new buildings, but as regards old buildings—buildings which had been designed without any thought of advertisement. If one was dealing with a new building one could see that one got a good building with a natural advertising space on it, and it would not be a bad idea if the Institute were to see for some lines of that sort. It would lead to the obliteration of windows perhaps, and of architectural features. One could see that some very artistic results might possibly come out of it. So far as the buildings were concerned, the trouble was not with new buildings going up but with old buildings changing hands—some going into the possession of multiple firms and people who wanted to advertise, and they were going to get their advertisements up regardless of any architectural features at all. They did not care which way it was done as long as they got their ideas before the public. Protection would have to be obtained from the authorities, and perhaps some action of a joint nature might be brought to bear in order to prevent properties being spoiled in this way. If they were to take an efficient control over it, it would require fresh legislation, and now that Parliament was turning its attention to the control of advertisements it would be a good time to bring their attention to the control of buildings in the way of uniformity and otherwise. All must be for all time dependent to a large extent upon the taste of the community.

MR. T. R. MILBURN said with regard to the question of advertising, he thought it was a good suggestion that our new buildings should be designed so as to provide space for advertisements without disfiguring their architectural features.

MR. HARVEY CORBETT said he would like to give one or two experiences or facts in connection with advertising in New York. On Fifth-avenue the local Association of Merchants and Property Owners had agreed among themselves not to deface their buildings by electric signs. It seemed to him that

St. Nicholas' Church, Newcastle.

From a Sketch by PROFESSOR A. E. RICHARDSON.

was a method by which the problem should be solved. On Broadway, however, the merchants had all agreed that they would go the limit in electrical illumination, and in this connection he would call particular attention to a Londoner who had been shown one of these tremendous electrical signs on Broadway covering the whole of the building and, of course, involving a large expenditure of money every minute of its operation. The American was bragging about his signs and pointing out what a wonderful thing it was, how much it cost, how many lights it contained, and finally, when he paused for breath, the Englishman said: "I see, but is it not horribly conspicuous?" A good many of their successful buildings had been made possible because the architect had persuaded the owner that good architecture pays. Something good to look at was the best advertisement in the world, and he believed that if architects would take that point of view a great deal could be done towards improving the standard of our street architecture.

Mr. W. I. McWilliams (South Africa, said he was struck at once by the dreadful monotony of the largest cities of England because of the smuts and the smoke and the terrible blackness. He was told that the Midland people were proud of the blackness of their city; if that was so, he did not see any hope of remedying the things which Sir Theodore complained about. If something could be done to persuade the authorities to electrify the railways and to lay out the cities with the smoky parts at some distance, and to introduce central heating into the larger houses, there might be a possibility of cleaner towns and better health conditions. In the Strand they had in one place a red-brick building, next door to it a terra-cotta building, and then beyond that a white terra-cotta building, and still something else of a different colour; then there was possibly a building erected in stone. In a few years' time the terra-cotta building would retain some of its colour, but a stone building would be jet black. Could not something be done to keep towns and cities a little cleaner? There was one thing which had appalled him in going through the lovely villages of Kent and Surrey and in the North, and that was the character of their shops and their shop windows. He noticed that in some of the villages there seemed to be a fashion created of painting the spaces between the half-timbering with a ghastly sky-blue in some instances, and in other instances a horrible sort of magenta-pink, and if that sort of thing was going to spread he did not know what was to become of the charm of the English villages, and he suggested that something should be done by the Institute to try to stop it.

THE PRESIDENT, in putting the vote of thanks, said he always understood that the Town-Planning Act was not obligatory, and that it was left to localities whether they adopted it or not, and that was one of the main reasons why all over England to-day we saw houses which were not uniform in construction or appearance, but were left to the individual taste of the owners. Going through the country, one of the saddest sights he saw was the vision of a village shop-window dressed in a more or less modern style, displaying a bewildering array of miscellaneous articles instead of showing, as they used to do, just a few. In the olden days one was attracted by the village shop and its modest display, whereas now one abhorred it. With regard to advertisements in our cities, he thought that was a matter on which the Institute might endeavour to do something. It was really deplorable that a nicely designed building should be used simply as a background for advertisement. There was really no need for this class of advertisement at all, and if they all agreed not to have them, just as much business would be done. With regard to the question of the lights at night, could anything possibly be worse than Piccadilly by night? It was the most hideous and vulgar place it was possible to imagine.

The vote of thanks was carried with loud and continued applause.

SIR THEODORE MORISON, in reply, said he was glad to hear Mr. Corbett make that extremely important point, that the success which had been attained in certain parts of America, in Fifth-avenue, New York, was due to the co-operation of the different shop owners there. It was to the common action on the part of owners of property in our shopping quarters that he looked to rather more than to municipal or national control. They all felt that a great opportunity had been given to architects in America by the princely munificence with which various private citizens of America had dispensed their wealth. They were endowing universities, public buildings and libraries, so that the American architects had the opportunity of making experiments in that country which they in England sighed for in vain. American architects were making a really magnificent use of that opportunity.

Civic Reception.

On Thursday evening there was a civic reception by the Lord Mayor and Corporation at the Banqueting Hall, Jesmond Dene. The guests were received by the Lord Mayor and Lady Mayoress of Newcastle (Alderman and Mrs. Walter Lee), with the Sheriff and Mrs. John Grantham. The LORD MAYOR, welcoming the visitors, said they all realised the part that the architectural profession took in beautifying cities, and they looked to them to help those who were responsible for the municipal life of the city to help to provide a city beautiful. They had men with vision in the past, like Dobson and Armstrong. Dobson was the architect for about the only street that they could justly be proud of in Newcastle, which was Grey-street, and it was a great pleasure to remember that in the building of that street a man of vision took the risk himself. It was not a municipal scheme, and now the estate was being adequately rewarded for the enterprise shown. However, municipal bodies had changed now, and some thought that big enterprises of this description should only be undertaken by municipalities.

Mr. E. GUY DAWBER replied.

A Day in Durham.

The greater part of Friday was devoted to a visit to Durham. Members journeyed from Newcastle by special train, and on their arrival immediately proceeded to the Town Hall, in Market-square, where they were received by the Mayor of Durham, Councillor T. W. Holiday, who was accompanied by Alderman Robert McLean and Alderman R. T. Herring.

THE MAYOR, having welcomed the visitors, Mr. E. GUY DAWBER, President of the R.I.B.A., returned thanks, and said that though it was true that he had never previously visited the city—a fact of which he was truly ashamed—he had seen it several times in passing through the railway station, from which point one got a most beautiful view of the city, a view which he had never seen equalled in England or in Europe. He would like to take that opportunity of congratulating the Mayor on the very beautiful Hall in which they were then sitting. He understood that it was built fifty or sixty years ago, and it was a delightful and most dignified room; the use they had made of heraldry in its scheme of decoration added to its dignity and interest.

Members of the Conference then made their way to the Palace Green, where they were taken charge of by various guides for the purpose of viewing the Cathedral, a lecture on which was given by Professor Hamilton Thompson.

Subsequently a luncheon was provided for the visitors who were the guests of the President and Council of the Durham Colleges, in the Lecture Hall, Palace Green. The President, Canon Ellershaw, was in the chair, and he was immediately supported by the President of the Royal Institute of British Architects, the High Sheriff of the County of

Durham (Colonel Stobart), and other members of the Institute.

Before separating for the purpose of visiting the Castle, Mr. E. GUY DAWBER returned thanks to the President of the Durham Colleges for their most generous hospitality.

COLONEL G. REAVELL seconded the vote of thanks.

CANON ELLERSHAW, replying, said that in a moment or two they would be seeing the Castle Hall, which, though not the largest by any means, was one of the most impressive buildings which exist in this country. It always pleased him to reflect that when Chaucer was going on his Canterbury pilgrimage the Hall of Durham Castle was there, not quite as it existed now to the outward view, but at all events for the same purpose, and that one building took them back to about the year 1320; the building had been used for its original purpose from that day to this.

After the luncheon, the visitors were photographed in the courtyard of the Castle, after which they made a thorough tour of inspection of the Castle under the expert conductorship of Mr. W. T. Jones, F.S.A., who gave an interesting account of the building and referred to the work of repair now taking place. Later in the afternoon tea was provided, and afterwards members returned to Newcastle.

The Dinner Card of the Conference Banquet.

The Conference Banquet.

The Conference banquet took place at the Old Assembly Rooms, Newcastle-on-Tyne, on Friday evening, under the Presidency of Mr. E. Guy Dawber.

The following is a list of some of those present:—

Prof. and Mrs. S. D. and Miss Adshead, Mr. T. C. Agutter, Mr. and Mrs. Rodney H. Alsop, Mr. James A. Arnott, Mr. Sidney Ash, Mr. F. G. Baker, Mr. C. Barman, Mr. J. A. Bean, Mr. S. F. Bestow, Mr. J. J. Blackett, Mr. R. C. Bosanquet, Mr. and Mrs. John W. Boyd, Mr. and Mrs. Stanley Brinton, Mr. Percy L. Browne, Mr. T. Lindsay Browne, Mr. Geo. T. Brown, Mr. C. F. Burton, Mr. W. S. Burton, Mr. and Mrs. James T. Cackett, Mr. James F. H. Checkley, Mr. and Mrs. F. Austin Child, Mr. Joshua Clayton, Mr. and Mrs. F. E. Coates, Mr. Cecil A. Cochrane, Mr. and Mrs. Harvey W. Corbett, Dr. Percy Corder, Mr. J. W. Corking, Mr. Gibson Cowe, Mr. Philip H. Cundall, Mr. and Mrs. E. Guy Dawber, Mr. and Mrs. R. Burns Dick, Mr. D. Ditchburn, Mr. R. F. Dodd, Captain F. E. Dotchin, Mr. W. Leonard Dowton, Mr. and Mrs. F. M. and Miss Dryden, Mr. Stephen Easton, Mr. T. E. Eccles, Canon H. Ellershaw, Mr. and Mrs. Charles S. Errington, Mr. Percy J. Fay, Mr. W. Ellison Fenwick, Mr. Henry M. Fletcher, Mayor of Gateshead, Mr. H. B. S. Gibbs,

Mr. M. K. Glass, Mr. Kenneth Glover, Mr. J. T. Graham, Mr. and Mrs. John P. Grant, Mr. and Mrs. Geo. H. Gray, Mr. C. Hastwell Grayson, Mr. and Mrs. C. W. Hall, Mr. E. Stanley Hall, Mr. Wilfred Hall, Mr. F. Hammond, Mr. R. G. Hammond, Mr. C. A. Harding, Mr. Arthur Harrison, Mr. and Mrs. Thomas Harrison, Mr. and Mrs. J. Wilson Hays, Mr. A. G. Henderson, Miss G. M. Hindley, Councillor T. W. Holiday, Mr. Herbert L. Honeyman, Mr. S. W. B. Jack, Mayor of Jarrow, Mr. A. M. Jenkins, Mr. A. W. Johnston, Mr. and Mrs. Ivor P. Jones, Mr. P. L. Jones, Mr. and Mrs. W. T. Jones, Miss V. T. Jones, Mr. H. W. Kaye, Mr. and Mrs. Arthur Keen, Mr. John Keppie, Mr. H. J. Kerr, Dr. Harold Kerr, Mr. Edwin M. Lawson, Mr. P. H. Lawson, Mr. Alderman Walter Lee, Mr. T. Alwyn Lloyd, Mr. A. E. Loithouse, Mr. J. A. E. Loithouse, Mr. T. Ashton Loithouse, Mr. and Mrs. Ian MacAlister, Mr. and Mrs. R. Norman MacKellar, Mr. C. Stanbury Madeley, Mr. W. J. McWilliams, Mr. and Mrs. A. Marshall, Mr. and Mrs. Chas. T. Marshall, Mr. and Mrs. R. Mauchlen, Mr. and Mrs. J. C. Maxwell, Mr. and Mrs. A. Milburn, Dr. K. V. Milburn, Mr. and Mrs. S. W. Milburn, Mr. and Mrs. Thomas R. and Miss Milburn, Mr. William Milburn, Mr. W. Milburn, Junr., Lt.-Col. Douglas Mitchell, Mr. T. Morison, Mr. and Mrs. J. Inch Morrison, Mr. H. S. Mundahl, Mr. E. R. Newbigin, The Lord Mayor and Lady Mayoress of Newcastle, Mr. C. F. Newcombe, Mr. P. Clive Newcombe, Mr. and Mrs. J. Landell Nicholson, Mr. E. Nixon, Sir Wm. J. Noble, Mr. G. Dale Oliver, Mr. W. T. Plume, Mr. A. N. Prentice, Mr. and Mrs. R. G. Purdy, Mr. Walter Raine, Mr. Norman Ramsay, Lt.-Col. Geo. Reavell, Professor C. H. Reilly, Sir George Renwick, Professor and Mrs. A. E. Richardson, Mr. T. W. T. Richardson, Professor A. Robinson, Mr. and Mrs. Ernest Robson, Mr. Harold S. Rogers, Mr. John Sanderson, Mr. G. V. Scott, Mr. Jas. Scott, Mr. and Mrs. James and Miss Shaw, Mr. and Mrs. A. Dunbar Smith, Mr. Joseph Spain, Mr. J. Stafford, Mr. W. J. Steele, Mr. and Mrs. P. J. Stienlet, Mr. E. Hardy Syms, Mr. and Mrs. Thos. S. Tait, Mr. A. K. Tasker, Mr. Laurence W. Taylor, Mr. and Mrs. Harry and Miss Teather, Mr. R. Temperley, Mr. Percy Thomas, Mr. O. M. Thorp, Mr. and Mrs. Chas. F. Ward, Mr. F. N. Weightman, Mr. A. E. Wigfield, Mr. J. A. Williamson, Miss Jean Williamson, Mr. and Mrs. H. W. Wills, Mr. Wm. Woodward, Mr. John Woollett, Mr. Thomas C. Yates.

At the conclusion of the banquet, the loyal and patriotic toasts having been honoured, the LORD MAYOR OF NEWCASTLE-UPON-TYNE (Mr. Walter Lee, J.P.) proposed the toast of "The Royal Institute of British Architects and its Allied Societies." Having referred briefly to the history of the Institute, he observed that it was the representative body of architects in this country and the parent body of the architectural societies of the whole Empire. The societies affiliated to the Institute in these islands numbered, with their several branches, not less than thirty-seven; whilst the Allied Societies overseas, in Africa, Australasia, Canada, India, and elsewhere, numbered twenty-two. This great confederation of architectural societies embraced more than 10,000 professional men, and exercised a powerful influence on the development of architecture throughout the whole Empire. It controlled or guided the whole system of architectural education, and its services in an advisory capacity were at the disposal of the Government, the great municipal authorities and the public generally, in all matters concerning the art of architecture.

One of the oldest, strongest and most energetic of the Allied Societies was the Northern Architectural Association, which so kindly undertook the organisation of the British Architects' Conference this year. The Northern Architectural Association was founded in the year 1858 and became an Allied Society of the Royal Institute of British Architects in the year 1889. It contained about 250 members, divided into Tyneside, Tees-side and Cumberland branches. It was playing an ever-increasingly important part in the work of the R.I.B.A. Among local gentlemen who had held the position of President of the Northern Architectural Association were Colonel Reavell, of Alnwick; Mr. W. T. Jones, of Durham; Mr. T. R. Milburn, of Sunderland; Mr. R. Burns Dick, of Newcastle; Mr. C. S. Errington, and Mr. J. T. Cackett, who had also for many years filled the office of Honorary Treasurer. Mr. T. R. Milburn had just been elected a Vice-President of the Royal Institute of British Architects, after years of valuable services on its Council. He might be permitted to make a passing reference to the Newcastle-upon-Tyne Society, which was a body of energetic and enterprising local gentlemen who, as a labour of love, were making a close study of a possible Newcastle beautiful, and in this connection he would say

that they, as a City Council, were always prepared to receive their friendly criticism and suggestions. There were big schemes for street improvements under the consideration of the City Council, and it was just possible that such opportunities might shortly be forthcoming for the display of architectural genius; that there would yet arise another Dobson and another Grainger who would add lustre to the history of the architectural profession of that city.

THE PRESIDENT (Mr. E. Guy Dawber), replying, said the Conference had been one of the most successful they had had. It gave them an opportunity of meeting old friends and making new ones; of visiting, under the most favourable auspices, buildings of the deepest historical interest, and also of talking over with their fellow-architects the problems that they had to deal with every day. Though the Lord Mayor had told them a lot about the Institute, there were one or two things he had not mentioned. One was that during the last twenty-five or thirty years they had established and co-ordinated a system of education such as in his young days was absolutely unheard of. All through the country now they had a series of schools of architecture. They were training their young men in design, in construction, and in the practice of architecture. It was a record to be proud of, and it had been through the help and enthusiasm of the Allied Societies that the parent body had been able to help with these schemes of education of architects throughout the country. When he first came to London thirty or forty years ago, the Royal Institute of British Architects consisted entirely of London men, allied with some country members, but in those days they had little voice in the control and management of the affairs of the Institute. How different it was to-day! They had nearly sixty Allied Societies connected with the Institute. They were one great federation of architects all over the Kingdom, and wherever the British flag flew; and their one object was, in the words of their Charter, "the encouragement of Civic Architecture." The Lord Mayor had a very great responsibility put upon his shoulders. To control the amenities of a great city like Newcastle-upon-Tyne was no light matter, with his many other spheres of work, but it was to him and the other heads of the great Corporations all over this country that architects looked to help with the future planning, laying-out wide spaces and beautifying of streets, which they hoped was going to make an entire alteration in the future of our towns and cities throughout the country.

MR. JOHN KEPPIE, replying for the Incorporation of Architects of Scotland, said he did not know that there were many towns in Britain that had such a fine record, principally on account of the distinction of the men, and the women, as Newcastle. He found that they had among the citizens, and those who were born in the immediate neighbourhood, Lord Eldon, the great politician, and Lord Collingwood, one of the most distinguished naval officers that ever entered the Navy. Then they had Mark Akenside, the poet. They had two Stephensons, and both of them were very distinguished; first of all, Stephenson who invented the engine, and who made railways. He has brought great distinction to Britain and great advantage to the world. Then they had his son, who was a great bridge builder and, he thought, a great architect. There was not a finer architectural erection in Britain than the Border Bridge. Then they had scientific people. There was that great naturalist, Thomas Belt. Then there was Grace Darling, Bewicke the engraver, and Joseph Crawhall. Crawhall's father was an engraver. He was one of the men who supplied King, of *Punch*, with the engravings of his best jokes. But the greatest production of Crawhall was his son, Joseph, and he was perhaps one of the best artists they ever had in this country. He was getting very nearly to the end of his list, but there was one further name to mention, that of Mr.

Percy Thomas, an architect very distinguished in Cardiff. The other day, when they were going round Tyneside, he was greatly amazed when, in a burst of confidence, Thomas said: "Well, you know, I was born in South Shields, and I am a Tynesider." The only other man he would like to mention was Mr. Norman MacKellar. He was proud to mention him, because he was a Glasgow boy, and he was an organiser. He was now a partner with one of the best firms in Newcastle. They all greatly appreciated his work in connection with that Conference.

LIEUT.-COLONEL G. T. REAVELL, replying for the Northern Architectural Association, said it would be invidious to mention any names where all had done so splendidly, but he must say that they all owed a very great debt of gratitude to Mr. MacKellar. Architects, he continued, practised an art which had great responsibilities and great anxieties, but at the same time great opportunities which brought great rewards. Times had changed since the days when men like Da Vinci could be architect, builder, sculptor, engineer and painter all in one, and buildings had become so complex that their versatility must in another way be as diverse as ever, and they did well if by skilful handling of a team they accomplished what the great masters achieved single-handed. No art can flourish except in a genial air, and they hoped for the day in this democratic country when every citizen would take the same interest in the Mistress Art as did the noblemen of the seventeenth and eighteenth centuries. The Institute had found, he continued, as the British race found, that freely yet firmly knit by the bonds of love rather than by those of red tape the genius of our people best worked out its destinies, and not only from Land's End to Cape Wrath but through the colonies and dependencies of the British Crown the daughters and the parent Institute exchanged counsel and help. Newcastle had been the first, following the example of their American friends, to invite architects to co-operate in the improvement of their great city. Resulting from this co-operation a scheme was evolved which provided a new thoroughfare, obviating in the most economical way the congestion which was certain otherwise to ensue, and it would eventually add to the material resources and the aesthetic value of the city in a striking and far-sighted manner. Although that scheme had suffered a check, it was a check arising not from a divided opinion on its merits, but from an honest difference of opinion on a matter of policy, and he felt confident that it would be carried to a worthy conclusion.

MR. T. R. MILBURN proposed the toast of "Our Guests" in felicitous terms, and said that Mr. John Keppie had mentioned some well-known names, but he could not excuse him from leaving out the names of Dobson and Grainger in connection with architecture, and the moderns, such as Parsons and Armstrong. He coupled with the toast the names of Major Temperley and of Mr. Bosanquet.

MAJOR ROBERT TEMPERLEY, replying, thanked the local architects, on behalf of the Newcastle Society, for the cordial welcome they had given them and for the help they had shown them. The Society started with the object of trying to foster wider interests in that locality. They were concerned for the beauty of the place, for its historical interests, its general amenities and architecture, and its sound investments. It was rather a big programme, and it might have been regarded perhaps by architects with suspicion and by the Lord Mayor and Corporation with some misgiving. From the architects they had a most cordial welcome, and he thought the Lord Mayor really hit on the best reason of all when he referred to the spirit in which they had embarked on their task as being a spirit not of fussy interference and the driving of a fad to extremes, but by suggestions which would be helpful. Two or three of the Northern Architectural Association's members had given

very excellent help. He understood there was a scheme for a great street in Newcastle which would tend to the further development of the city, and though that scheme was checked for the moment, he did not believe for one moment that this present check was anything more than a temporary one. On behalf of the Newcastle Society he expressed the hope and belief that that scheme would eventually be carried through.

Mr. R. C. BOSANQUET said they were grateful to the men of architectural calling for all they had done for the human race since it began to seek a better shelter than a cave in the face of this somewhat uncomfortable earth. He was lately in Oxford, and his host at luncheon was also entertaining an American architect; and it so happened that they drew from this architect that, interesting as were the colleges of Oxford, what he would like to see was the small English house. He said: "My work is domestic work." They visited one of those old-world villages, and their American friend was filled with delight and admiration at its exceeding charm and beauty, and he said to one old inhabitant who was tottering down the village street: "What a beautiful place this is you have to live in." It was Sunday, and he (the speaker) did not know whether the old man thought that a place should not look beautiful on a Sunday, but he looked shocked and said: "Beautiful? I do not know about beautiful, but it is very old." That remark gave some indication of the lingering British prejudice which regarded beauty as something immoral. Antiquity was quite all right, and that was why the archaeologist, in spite of all his sins, moved about the country in comparative safety; but the lot of the man who denounced the ugliness or vulgarity of modern aberrations trod a dangerous and thorny path. He rejoiced very much that they had spoken so warmly of the provincial schools of architecture. They knew there were great and flourishing schools of architecture in London; he had the good fortune for some years to see the work which Professor Reilly and Professor Adshead and Professor Abercrombie were doing in Liverpool, and similar work was being done in many other great cities. Newcastle, with its University School of Art, was working on similar lines.

Responding to persistent calls from all parts of the hall for a speech, Mr. HARVEY CORBETT said it was a tremendous pleasure to him to be there. He had been greatly interested in the discussions which they had listened to at that Conference. The general questions which were interesting them so much were town planning and the general improvement of their cities. He would like to point out one or two developments which had occurred in the United States. The first thing that suggested itself to him was that the working architect was more recognised as a professional man than he used to be. In the United States the architect was rapidly becoming a professional man of exactly the same legal standing as a doctor or a lawyer. In New York State it was required that each man should qualify by means of a very rigid examination before he was permitted to use the word "architect." The result was that the profession had advanced to a remarkable degree. Then they had recently created in many of their cities and in some of their States a Fine Arts Commission which had certain powers and jurisdiction over everything on which a State or city spent money. That meant that they did not reate from State or city funds some of the nonumtural monstrosities that they had created in the past, because the Commission had the power of a veto and thus helped the designer to do better things. He was pointing out these things simply to show that there was a spirit of quite hearty co-operation between the profession and the public at large, and a growing interest on the part of the public in architectural matters and in the beautification of their cities.

This concluded the toast list, and the banquet ended with the singing of "Auld Lang Syne" and the "National Anthem."

The large panoramic Conference group was taken at Durham by Messrs. Philipson & Son, Ltd., 20, Oxford-street, Newcastle-on-Tyne, who will supply prints, price 6s. 6d. each

LIVERPOOL SCHOOL OF ARCHITECTURE: ANNUAL EXHIBITION OF STUDENTS' WORK

By HAROLD A. DOD, M.A., A.R.I.B.A.

As reported in the last issue, the annual exhibition of the work of the students of the Liverpool University School of Architecture was formally opened by Mr. Ramsay MacDonald, the ex-Prime Minister, at the Walker Art Gallery. This year the large gallery set apart for the exhibition is well filled with representative examples of the work of each year of the school's curriculum. One would say, at the outset, that the drawings have been particularly well hung, a feature which naturally adds a great deal to their attractiveness. As the exhibition is open to the public this question of attraction is important, the exhibition being primarily designed to interest and instruct, amongst others, that "section of democracy which hungers and thirsts after spiritual peace and beauty," which Mr. MacDonald claimed, in his opening address, to represent. In this connection it is gratifying to record that there were more visitors this year in the gallery than on previous occasions.

In view of past successes, it is natural to look for a high standard of work from the Liverpool School, but it is obvious that the students have experienced little difficulty in rivaling, and in some cases surpassing, their predecessors. In this exhibition there is a large percentage of first-year work on view, from a study of which it is clear that the system of training adopted in the early stages goes a long way to give the student a thorough grasp of the essential elements of his art. At the same time, let us add, there is no evidence of any attempt to force the individual into a common mould; on the contrary, an independence of outlook is fostered in the belief that in this manner, with careful training, the best results are obtainable. It is held that individuals working along more or less parallel lines will make the finest school of architecture. It would indeed be regrettable if there appeared any trace of the mechanical in the students' work. The fact is, however, that all through the course up to the final year one finds the most divergent views are taken of the same problem, surely a most refreshing result and an ample reply to those who still claim that a school is not a proper place in which to train the individual to become an architect.

Prominent amongst the First-Year work is a composition by Mr. H. G. Ellis, carefully rendered in sepia, and many of the other drawings of Renaissance subjects also display considerable skill in the application of flat washes of colour. Judging by the work submitted, the Second Year contains many good students. Mr. G. A. V. Hall is distinguished by a delicately drawn design for a Golf Club House. His scheme is suggestive of a Chinese pagoda, modified, of course, to suit western requirements, but the spirit has been well caught with red lacquered columns and green tiled roof. A second design in the Georgian manner for the same subject, by Mr. T. C. Haynes, is set forth in a series of very pleasantly coloured drawings.

In setting a programme for a small aquarium, it seems clear that a rather baroque type of building was called for, a subject which would have delighted French architects of the Louis XV. period. The actual schemes submitted, however, are somewhat disappointing, although in one interior an attempt is made to give one the impression of being in a rock

cavern under water—surely the proper setting in which to view fish and other aquatic animals.

Amongst the Third-Year work appears the successful design for the Lever Prize, the subject being an entrance to the Mersey Tunnel. Here again, one must confess to a certain feeling of disappointment, though perhaps the programme and not the student is to blame. It would seem to us that the entrance to a tunnel 40ft. in diameter, designed to take four lines of traffic is of sufficient importance to be treated as a subject in itself. Here, however, we find two blocks of office buildings tacked on, with the inevitable result that, owing to difference in scale of the parts, one or the other inevitably suffers. In the winning design, the tunnel entrance has the unfortunate appearance of being sunk into the ground, overwhelmed by the annexed buildings.

The project, a Summer School for a Political Party, has produced some good work in the fourth and fifth years. Miss Thelma Silcock has designed a charming group, the influence of which would surely be for the good of any political party so fortunate as to occupy the delightful buildings. Mr. F. N. Astbury presents a more robust conception of the requirements of politicians, and his perspective drawing of the group, with a panoramic background of rugged Scottish mountain scenery, was, we trust, not wholly lost upon Mr. Ramsay MacDonald as he made his tour of inspection. Mr. F. H. Crossley and Mr. A. W. R. Cowley have submitted good designs for a Church and Parish Hall, though the latter's church tower is, we venture to think, too heavy.

It is most interesting to observe that many of the students who excel in design and rendering prove themselves most capable in the production of working drawings. Mr. H. Thearle and Miss Thelma Silcock respectively carried off the first and second prizes offered by Messrs. Holland, Hannen & Cubitt for practical work. The Archibald Dawney Scholarship was awarded to Mr. A. C. Todd for an excellent piece of work, and Mr. C. C. Shaw submits a competent set of working drawings for a General Post Office. It should be pointed out here that these working drawings are decidedly of a practical order, the students by this time (fourth and fifth years) having spent considerable periods in architects' offices engaged on actual work.

The preliminary drawings submitted for the Rome prize are always an interesting feature of the exhibition, and this year is no exception. The subject set, a Gateway to a Town, was capable of many different interpretations. The schemes submitted embrace many divergent points of view, from a simple pile of Gothic outline to a solid San Michele gateway, and all display that strong individual character which, as we stated above, we must regard as clear evidence that the school is conducted on wise lines throughout.

It is to be regretted that the exhibition does not contain the winning schemes for this year's Rome prize and Jarvis Studentship won by Mr. G. A. Butling and Mr. C. A. Minoprio respectively, as these would have formed a fine culminating point to a review of the five years of work.

In the fifth year, perhaps, the most interesting work is the design for a convict prison, in the report of which we observe that the student visited three of H.M. prisons. Judging by the set of drawings produced, the impressions received on these visits must have been most pleasant. Mr. Theo. Will's design for a Cathedral of Humanity is a finely conceived pile in brick and concrete. Mr. F. H. Crossley's design of a Railway Terminal displays a great deal of careful thought and good draughtsmanship.

The School of Town Planning has achieved much good, solid work, but it is impossible without a very great deal of close study of the programmes to attempt any detailed criticism. In conclusion, we feel that Professor Reilly and the staff of the school, as well as the students, are again to be congratulated on a thoroughly successful year's work.

THE BUILDING TRADE.

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—XI

IN our last article we cited certain dicta of Lords Macnaghten and Lindley in *Colls v. Home and Colonial Stores* (1904 A.C. 179), as to the principles on which the courts should act in granting injunctions or giving damages where the right to light has been infringed. "It must be remembered that, as Lord Macnaghten said, it is a matter for judicial discretion, and therefore no hard and fast rules can be laid down, but such a discretion is exercised on definite lines and thus previous decisions are material."

As we have shown, Lord Macnaghten expressed the opinion that if there really was a question as to whether the obstruction was legal or not, and if the defendant had acted reasonably and fairly, only damages should be awarded; and Lord Lindley took the view that, even if the plaintiffs in that case (*Colls' case*) could show any cause of action, the damages would be small and certainly a mandatory injunction should not be granted; but in addition to the above opinions, we propose to mention one or two cases in which the circumstances have been such as to incline the Court to withhold an injunction and only to award damages.

In *National Provincial Plate Glass Insurance Company v. The Prudential Assurance Co.* (1877, 6 Ch. Div. 757), a case referred to by Lord Lindley, the obstruction complained of was a parapet, and the damage was assessed at £100 to £200, but the injury was caused in connection with an important building scheme, and the alteration in the building gave the plaintiffs in other places more light than they had previously enjoyed. An injunction was refused and the Court awarded £200 damages, but allowed no costs, on the ground that the litigation might have been avoided had the plaintiffs been more reasonable in their demands. This is one of the cases in which, since the decision in *Colls' case*, it is doubtful whether the plaintiffs could have shown any actionable interference with their right to light, and on this point, *Davis v. Marrable* (1913, 2 Ch. 421), seems to confirm such doubts, as in that case, where the offending building caused some obstruction, but in other places increased the former access of light, the light as a whole was regarded, and the plaintiffs failed in their action, but, as regards the decision as to the injunction, this point does not affect the decision given in *National Provincial Plate Glass Co.*

In *Shelfer v. City of London Electric Lighting Company* (1895, 1 Ch. 287), a case also referred to by Lord Lindley in *Colls' case*, the Court of Appeal laid it down that, in the case of a continuing actionable nuisance, the jurisdiction of the Court to award damages instead of an injunction ought to be exercised only under very exceptional circumstances, and Lord Justice A. L. Smith said that damages instead of an injunction may be given when all the following requirements are found in conjunction, that is, where the injury to the plaintiffs' rights are (1) small; (2) capable of being estimated in money; (3) capable of being adequately compensated in a small sum; and (4) where an injunction would be oppressive. In addition to these requirements, as we have shown above, and as was again asserted in this case, there is the conduct of the parties to be considered—if, for instance, the defendant has hurried on his building operations, or acted unreasonably, he may have disentitled himself from asking that damages shall be substituted for an injunction.

We now come to a point which has only very recently been decided as to the jurisdiction of the Courts to award damages where the obstruction is only threatened, the building not having yet reached a height where it obscures the light. Such actions are known as *quia timet* actions.

In *Litchfield-Speer v. Queen Anne's Gate Syndicate, No. 2, Ltd.* (1919, 1 Ch. 407; *The Builder*, February 28, 1919), it was held that the decision in *Colls v. Home and Colonial Stores* (1904, A.C. 179) had not abrogated the jurisdiction of the Courts to grant an injunction in such cases if the evidence shows that the new building will create a nuisance when completed, or the Court may make an order declaratory of the plaintiff's right, with liberty to apply for an injunction should it become necessary; but doubts were expressed whether in such cases the Court had power to award damages, even where it appeared that the threatened injury could be adequately compensated by a small money payment.

In *Slack v. Leeds Industrial Co-operative Society* (1923, 1 Ch. 431; *The Builder*, May 25, 1923), the Court of first instance found that the circumstances were such that applying the principles suggested by Lord Justice A. L. Smith in *Shelfer v. City of London Electric Lighting Company* (*ubi sup.*), the injury could adequately be compensated by damages, but that such a course was not open to the Court by reason of the decision in *Dreyfus v. Peruvian Guano Company* (43 Ch. Div. 316). The Court of Appeal also felt bound by *Dreyfus's case* (that being a decision of the Court of Appeal), and affirmed the decision of the Court below, but the point has now been definitely decided to the contrary by the House of Lords in the same case *sub nomine*, *Leeds Industrial Co-operative Society v. Slack* (1924, A.C. 851; *The Builder*, January 2, 1925). The case really turned upon 21 & 22 Vic. C. 27, section 2, Lord Cairns Act, 1858, which we referred to in our tenth article. In the first place, there has been much doubt whether that Act is still operative, as it was repealed by the Statute Law Revision Act, 1883, with, however, a saving clause in section 5 that the repeal should not affect any jurisdiction, or principle, or rule of law, or equity, established or confirmed by any enactment so repealed. The Statute Law Revision Act, 1898, in its turn, repealed parts of the Act of 1883, including section 5, but section 1 contained a proviso that the Act should not affect any principle or rule of law or established jurisdiction, notwithstanding that the same might have been affirmed by, or derived from, any of the repealed enactments. The House of Lords has now, by a majority, authoritatively held that, notwithstanding the repeal of section 2 of Lord Cairns' Act, the effect of section 16 of the Judicature Act, 1873, and section 1 of the Statute Law Revision Act, 1898, is to maintain in force the jurisdiction which it conferred.

We set out the material parts of section 2 in our tenth article, but for convenience we do so again here. Section 2 provides: "In all cases in which the Court of Chancery has jurisdiction to entertain an application for an injunction against . . . the commission or continuance of any wrongful act . . . it shall be lawful for the same Court, if it shall think fit, to award damages to the party injured either in addition to, or in substitution for, an injunction." The Courts below had held, following *Dreyfus v. Peruvian Guano Company* (*ubi sup.*) that the section only applied where the damages had already been occasioned, and that it did not apply where the damage was only threatened, but the House of Lords have now held by a majority that it applies also where the damage is threatened and in a *quia timet* action such as was the case before them. The following passage from the judgment of Lord Finlay seems to explain the position: "The power is given to award damages to the party injured either in addition to or in substitution for an injunction. If the

damages are given in addition to the injunction they are to compensate for the injury which has been done, and the injunction will prevent its continuance or repetition. But if damages are given in substitution for an injunction they must necessarily cover not only injury already sustained, but also injury which would be inflicted in the future by the commission of the act threatened. If no injury has yet been sustained, the damages will be solely in respect of the damage to be sustained in the future by injuries which the injunction if granted would have prevented."

And again: "In the present case the building has not proceeded far enough to constitute an actionable wrong in respect of the plaintiff's lights, and an injunction would prevent the commission of that wrong in the future. On what principle can it be said that until there has been some interference with the plaintiff's windows, the Court cannot give damages in lieu of an injunction against obstruction? Such a construction would impose a purely arbitrary and meaningless restriction on the relief to be given under the Act."

This decision has set aside doubts that have been experienced for some time past (as in *Martin v. Price*, 1894, 1 Ch. 276), and adopts a course pursued in *Holland v. Worley* (1881, L.R. 26 Ch. Div. 578), but the House of Lords pointed out that the jurisdiction must not be so exercised as in any sense to legalise the commission of torts by any defendant who was able and willing to pay damages, and two passages were quoted from judgments delivered in *Shelfer v. City of London Electric Company* (1895, 1 Ch. 287) and *Cowper v. Laidler* (1902 Ch. 337).

In the first of the above cases Lord Justice Lindley (as he then was) said: "The jurisdiction to give damages instead of an injunction is in words given in all cases; but the use of the word 'damages' has led to a doubt whether the Act applies to cases where no injury at all has yet been inflicted but where injury is threatened only. Subject, however, to that doubt there appears to be no limit to the jurisdiction, but in exercising the jurisdiction thus given, attention ought to be paid to well settled principles; and ever since Lord Cairns' Act was passed, the Court of Chancery has repudiated the notion that the Legislature intended to turn that Court into a tribunal for legalising wrongful acts; or, in other words, the Court has always protested against the notion that it ought to allow a wrong to continue simply because the wrongdoer is able and willing to pay for the injury he may inflict. The doubt then expressed has now been set at rest by the decision in *Stocks case*. The passage quoted from *Cowper v. Laidler* was from the judgment of then Mr. Justice Buckley: "The Court has affirmed over and over again that the jurisdiction to give damages where it exists is not to be used as in fact to enable the defendant to purchase from the plaintiff against his will his legal right to the easement."

Lords Sumner and Carson dissented from the judgment delivered by the majority of the House of Lords in *Slack's case*.

It may be useful to give the form of the order made in this case. "Order of the Court of Appeal reversed and cause remitted back to the Court of Appeal with a direction that there is jurisdiction to award damages and a direction to do therein as shall be just and consistent with this judgment. The respondents to pay the costs of the Court of Appeal and also the costs of the appeal to this House."

Contractors' New Office.

Messrs. William Shepherd & Sons, Ltd., road, contractors and asphaltic slag manufacturers, Milkstone, Rochdale, have opened a Birmingham office at 104, Colmore-row, Telephone, Central 194.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Pre-Cast Concrete.

[REPLY TO "ACCELERATE," JULY 3.]

SIR,—Your correspondent will find that the work described can be considerably speeded up if the blocks are cast on a levelled floor and the boxes made to consist simply of four sides without a bottom. When the concrete has been in a day the sides can be lifted off leaving the block to mature undisturbed, and the box can then be placed in a new position and a fresh block cast at once. In the other method the blocks have to be mature before they can stand being tipped out, and greater delay follows.

"PRACTICE."

Cracking Asphalt.

[REPLY TO "PUZZLED," JULY 3.]

SIR,—One good $\frac{3}{4}$ in. coat of asphalt is better than two $\frac{1}{2}$ in. coats if it is to be laid on boarding. Such a coat being homogeneous and elastic will suffer the inevitable slight movement of the timber substructure, where the heavier coat would crack under the strain. Your correspondent will do well in future to specify similar work as above, and will further find first cost considerably lower and results far better.

"SPECIFIC."

SIR,—This should have been laid on boarding felted and then covered with expanded metal. I have laid a number in the last fifteen years, and not one has given. But with board and felt only one must expect a bad result.

E. B.

Blistered Paint.

[REPLY TO "AMATEUR," JULY 3.]

SIR,—For a thoroughly sound job, paint that is badly blistered should be removed either by burning off right to the bare wood, or by the use of a paint remover, and the work entirely re-primed and repainted. The next best thing is to cut out the blisters and coat them over with a priming of water paint, and then rub down the whole before painting.

"DECORATOR."

SIR,—Burn off all blistered paint. In the treatment following use turpentine only as thinners, when the pigment happens to be ground in raw oil.

JOHN M. FIFE.

SIR,—The best cure for blistered paint that I know is to burn off the old paint or strip it with a spirituous paint-remover, and then prime the work with one coat of a good water-paint or washable distemper. Proceed to paint in the usual manner, but take care to mix the oil paint "sharp," i.e., use little oil, and sufficient turpentine with a little gold size for a binder. Finish with a good outside copal varnish. X.

Removing Old Varnished Paper.

[REPLY TO "REPAIRS," JULY 3.]

SIR,—Varnished paper can best be removed by mixing 2 oz. of borax with one pint of hot water, and applied to the surface, brushing same down with a stiff wire brush, the surface being kept damp during the process to prevent dust which would be harmful to the workman engaged.

"P. C."

SIR,—Old varnished paper may be removed by one of the many paint solvents. Such surfaces, however, if in good condition, form an excellent ground for any after treatment, if properly cleaned and prepared, and need not necessarily be otherwise interfered with.

JOHN M. FIFE.

SIR,—If stiff wire brushes are used, the old varnish can be removed sufficiently to permit

of the paper being scored down, and then a thorough soaking with hot water will soften the paper sufficiently to permit of its removal. Paint and varnish solvent is sometimes used to remove the varnish, but this of course is a more expensive method. Still another and quicker way is to remove the varnish by means of a hard wire brush, but in this case it is necessary for the operative to protect his mouth and nostrils so as not to inhale the dry varnish as it comes off.

ARTHUR S. JENKINGS.

Rolling Margin.

[REPLY TO "STUDENT," JULY 3.]

SIR,—The rolling margin on plates, sections, and bars is $2\frac{1}{2}$ per cent. over or under the specified weights. Where a minimum weight of section steel is specified the margin is 5 per cent. or under. Where exact, or "dead" lengths are specified the margin is $\frac{1}{8}$ in. over or under.

"TRADE."

SIR,—The "Rolling Margin" in structural steel is $2\frac{1}{2}$ per cent. under or over the calculated weights, as given in the British Standard Specification, and the maximum variation allowed in cutting so-called "dead" lengths is $\frac{1}{8}$ in. under or over.

See B.S.S., No. 15, 1912.

W. G. W.

Subsidy House.

[REPLY TO MR. R. J. SLATER, JULY 3.]

SIR,—No building can be undertaken without the consent of the local authority, and as this is withheld there is no redress in the matter. The vendor should have enumerated the restrictions under which the property suffered in the conveyance of same, and there may be a case for an action for damages against him for misrepresentation of the property sold, and

your correspondent should obtain legal advice upon the matter.

"SUBSIDY."

SIR,—I had an experience exactly similar to that described by Mr. Reginald J. Slater in your issue for July 3, viz., the building of a garage in an open space between two gables, one house being a subsidy house. The clause ruling the point states: "Contributions will not be payable in respect of any house which contains (among other things) a garage." In my case, the garage was built after the subsidy, and my contention is that the clause refers to a house which contains a garage for business purposes, similar to that of an undertaker or for hiring. There is nothing to prevent a sale of the land and the purchaser building on it subject to by-laws, and I think that the authority would find some difficulty in getting a verdict in their favour if the work were proceeded with.

WM. UNSWORTH.

Rights of Light.

SIR,—A lean-to slate roof over a 6 ft. 6 in. by 3 ft. 6 in. wash-up-pantry, has in it two skylights, one above the other, the pitch of the roof being about 30 degrees. The pantry is a projection from the main building at first-floor level, and the roof does not lean from the main wall, but parallel to it. It is proposed to build up to the existing building, leaving the pantry with an area about 6 ft. 9 in. square at its eaves, and carried up another 24 ft. What angle from the sill of either skylight should be left clear of obstruction to ensure them their right of light?

"CROWN GLASS."

Veneers.

SIR,—Would you kindly inform me where I could obtain selected veneers of different woods for graining copies, or coloured plates of graining and marbling?

J. EVETTS.

NEW BUILDINGS IN LONDON.

Battersea.—The Gaslight & Coke Co., Ltd., propose to build important extensions at the gasworks. Plans are being prepared under the direction of Mr. T. Hardie, M.I.C.E., chief engineer to the company.

Carlton House-terrace.—Extensions are to be made to the German Embassy at No. 9, Carlton House-terrace. No. 8 of the terrace has been purchased, and is to be incorporated. Plans are being prepared by an architect on the staff of the Legation.

Chelsea.—Work is shortly to be put in hand on the large extensions at the St. Mark's Training College at King's-road, S.W.3. Messrs. Rice & Son, 15, Stockwell-road, S.W.7, builders. Messrs. Beazley & Burrows, 17, Victoria-street, S.W.1, architects.

Croydon.—It is proposed to build a new Palais de Danse to plans prepared by Mr. H. Victor Kerr, 22, Old-square, Lincoln's Inn, W.C.2.

Deptford.—No. 20, High-street, S.E., is to be rebuilt for Messrs. Mitchell & Son, of High-street, Deptford. The contractors are Messrs. W. Figg, George-row, S.E.6. The architects are Messrs. Purvis & Purvis, New Cross-road, S.E.14.

Edgware.—The Bridge Farm Estate is being developed for housing purposes. Mr. William Pitt, 11, Bolton-street, W.1, architect.

Edmonton.—Messrs. Waite & Waite, auctioneers and estate agents, of 15, Great Castle-street, W.1, has sold the freehold site occupied by Nos. 157, 159, & 161, Fore-street, N., on which a block of shops and flats is to be erected.

Great Ormond-street.—The Great Ormond-street Hospital for Sick Children, W.C.1, is to be extended at a cost of £40,000. Mr. Charles E. Barry, A.R.I.B.A., Parliament-mansions, Victoria-street, S.W.1, architect.

Greenwich.—A men's receiving ward, offices, board-room, etc., are to be erected and sundry alterations executed at the Greenwich Union Infirmary, S.E.10, to the plans of Messrs. William A. Pite, Son & Fairweather, 12, Carteret-street, Queen Anne's Gate, S.W.1. Mr. Louis Jacob, F.S.I., 39, Bloomsbury-square, W.C.1, quantity surveyor.

Hanwell.—The Great Western Land Co., Ltd., has placed a contract for the erection of 90 houses in Studland-road, W.7, with Mr. P. Brown, 36, Magnolia-road, Chiswick, W. The architect is Mr. R. A. C. Churchward, 92, Victoria-street, S.W.1.

Kensington.—Plans for a new bank for the Midland Bank, Ltd., at 15-16, Leonard's-place, Kensington, W.8, have been prepared by Messrs. Whinney, Son & Austen Hall, 8, Old Jewry, E.C.2.

Leadenhall-street.—It is proposed next year to commence the rebuilding of the office premises at No. 147, Leadenhall-street, E.C.3. Mr. James O'Connor, architect, New York City.

Leighton-road.—Messrs. Watney, Combe, Reid & Co., Ltd., brewers, have decided to rebuild the "Gloucester Arms" public-house at 61, Leighton-road, N.W., at a cost of about £10,000. Plans by the company's chief architect, Mr. Malcolm T. Saunders.

Maidstone-street.—The "Britannia" public house at Britannia-street, E.1, owned by Messrs. West's Brewery Co., Ltd., Hackney-road, E.2, is to be pulled down and reconstructed. Mr. Samuel A. S. Yeo, A.R.I.B.A., Bank Chambers, St. John-street, E.C.1, architect.

Marylebone-road.—It is proposed to rebuild the Queen Charlotte Hospital at Marylebone-road, N.W.1. Messrs. Jarvis & Richards, 60, Tufton-street, S.W.1, architects.

New Cross.—The site of 32, New Cross-road, S.E., has been taken over for a billiard hall for 16 tables. The contract has been placed with Messrs. Telling Bros., Ltd., Eastcote Station, Esher. Plans by Mr. Charles Caney, surveyor, 8, Camberwell Green, S.E.5.

Norfolk-street.—The Howard Hotel, in Norfolk-street, Strand, W.C.2, is to be completed, modernised and extended. Messrs. William & Edward Hunt, F.R.I.B.A., 30, Norfolk-street, W.C.2, architects.

Pall Mall.—Extensions to the premises of the Army and Navy Club in Pall Mall, S.W.1, are to be carried out. The contractors are Messrs. Higgs & Hill, Ltd., Crown Works, South Lambeth-road, S.W.8. Mr. Claude W. Ferrier, F.R.I.B.A., 11, Waterloo-place, S.W.1, architect.

Peckham.—A new billiard hall and a block of six shops are to be built at the corner of Peckham Rye and Nunhead-crescent, S.E.15. Messrs. Dowton & Co., architects, 165, Ryelane, Peckham, S.E.

Piccadilly.—The site has now been cleared for the important block of shops and flats which are to be erected at No. 81, Piccadilly, W.1, for Messrs. R. M. Phillips, Ltd., of Conduit-street, W.1. The contractors are Messrs. Griggs & Sons, 100, Victoria-street, S.W.1. Messrs. Trehearne & Norman, of Windsor House, Kingsway, W.C., architects.

Plaistow.—The rebuilding of the old portion of the out-patients' department, including the casualty department, etc., to the plans of Messrs. A. Saxon Snell & Phillips, 9, Bentinck-street, Manchester-square, W.1, is projected by the Board of Governors of the St. Mary's Hospital for Women and Children.

Regent-street.—The rebuilding of the block of premises at Nos. 60 and 62, Regent-street, W.1, including the well-known Imperial Restaurant of M. Oddenino, is to be put in hand towards the end of this year. Mr. T. H. Smith, of 17, Basinghall-street, E.C.2, architect.

Rotherhithe.—New office premises are to be built on the site of Nos. 464-470, Rotherhithe-street, S.E.16, for Messrs. H. J. Enthoven & Sons, Ltd., 54, New Broad-street, E.C.2. The contract has been placed with Messrs. Galbraith Bros., 63, Waterloo-street, S.E.6. The architects are Messrs. J. Moir, Kennard & Sons, 13, Railway Approach, London Bridge, S.E.1.

Shoreditch.—Messrs. R. & J. Hill, Ltd., of 178, Shoreditch High-street, E.1, propose to build an extension to their factory and warehouse. Mr. William Pitt, 11, Bolton-street, W., architect.

Southfields.—A new mosque for the Ahmadiya Movement in Islam is to be built in Melrose-road, S.W.18. Mr. Chas. H. Rosher, 17, Dane-street, Holborn, W.C., architect.

Streatham.—A permanent vicarage is to be erected at St. Margaret's Church S.W.16, for the Rev. A. P. Gritch. Plans by Mr. W. H. Forsyth (Messrs. Forsyth & Maule), 12, Stratford-place, W.1.

Surbiton.—The Regent House estate at Surbiton, extending over 75 acres, has been bought by Messrs. H. C. Jones & Co., builders, 496, Streatham High-road, S.W.16. It is intended to construct several miles of roads and sewers and to build about 500 houses.

Sydenham.—A new parish hall for All Saints' Church, Sydenham, S.E., is to be built, at a cost of £5,000. Mr. Herbert Passmore (Messrs. Caröe & Passmore), 3, Great College-street, S.W.1, is the architect.

Tooting.—The erection of a new church, dedicated to St. Augustine, on a site in Garrett-

lane, S.W.17, is proposed. Mr. H. Burk Downing, F.R.I.B.A., 12, Little College-street, S.W.1, architect.

Vincent-square.—New quarters for the nursing staff at the Grosvenor Hospital for Women at Vincent-square, S.W.1, are to be erected. Messrs. Fox, Jones & Penfold, 11, John-street, Bedford-row, W.C., architects.

Woolwich.—It is expected that the cinema at Beresford-square, S.E., will be closed shortly in order that a complete reconstruction scheme may be carried out. Mr. Bertie Crew, 75, Shaftesbury-avenue, W.1, architect.

Woolwich.—It is proposed to complete the administrative quarters of the British Hospital for Mothers and Babies, at Woolwich, S.E., at a cost of £40,000. Plans have been prepared by Messrs. Young & Hall, 17, Southampton-street, W.C.1.

SHOPKEEPER'S LIABILITY

£25 Damages for a Shop Blind that Fell from Unknown Cause.

A jury gave a verdict for £25 damages, in a most unusual claim, which exemplifies the risk run by shopkeepers, in the Shoreditch County Court before Judge Cluer recently. The plaintiff in the action was Ellen Amy Williams, of 11, Somerford-grove, Stoke Newington, and she sued Mrs. Bacon, a stationery and toy dealer, of 113, Evering-road, Stoke Newington, to recover £50 for personal injuries. It was alleged that, owing to the carelessness or negligence of the defendant or of her servant, a shop blind fell on the plaintiff whilst she was passing under it. She was severely injured, besides suffering great shock to the system. The defence was that it was no fault of the defendant, whose blind was in a perfect condition, and that the cause of it falling was a tremendous gale of wind which they had had during the night, which might have weakened it, and therefore it was an Act of God.

Mr. O'Connor appeared as counsel for the plaintiff; and Mr. Cluer, son of the judge, for the respondent.

The plaintiff gave evidence as to the blind falling completely upon her, the blind and the roller box as well. No evidence was called to show that the blind was in a bad condition, so Judge Cluer ruled out negligence, and plaintiff's counsel said it should really have been nuisance, it being the duty of shopkeepers to have a blind which was in perfect condition.

For the defence it was argued that nothing had been found wrong with this blind, not a single screw loose, nor anything the matter with it, and that, therefore, it was clear that the violent gale during the night had caused the damage by weakening it, and that could be ascribed as an Act of God.

Judge Cluer, in summing up, said that a blind over a public highway outside a shop had to be kept safe, and there was an imperative duty upon the shopkeeper to see that this was done. It was for the jury to decide whether they considered the plaintiff was at fault, or whether it was an Act of God, owing to the gale.

The jury retired, and on returning into Court gave a verdict for the plaintiff for £25 damages and costs.

Obituary.

The death has occurred, at his residence, 116, Tosson-terrace, Heaton, Newcastle, of Mr. Thos. White, aged 74, formerly a prominent Tyneside builder and contractor.

The death has occurred, at Streatham, of Mr. Wm. Raine, aged 66, of the firm of Messrs. W. Raine & Son, plumbers, of Coniscliffe-road, Darlington.

The death has occurred, at his residence, Charlton House, Mannamead, Plymouth, of Mr. Sydenham James Heal, a well-known building contractor.

BOOK REVIEWS

RATES OF WAGES IN THE BUILDING TRADE

Building Practice. By L. ALLEN GERRARD, F.I.O.B. (London: Blackie & Son, Ltd., 50, Old Bailey.) Price 3s. 6d. net.

This book has been prepared for the guidance of the senior student who wishes to study the question of actual building management, and for the foreman desiring more knowledge of the methods at headquarters; while the builder in practice may be able to learn something about modern ideas which are in general use among large firms. The whole of the contents are devoted to the clerical sections and the question of organisation on the site of operations has not been included, as this was considered outside the scope of this elementary book.

The author has commenced at the very beginning of the subject, and he wisely deals with the most simple items at the outset, in order to enable the reader to grasp readily the principles of the office system. The subjects covered by the book include contracts, finance, accounts, progress records, costing, and other items, which are essential in the contracting business, and each chapter is presented in an interesting manner with due regard to the class of reader catered for.

The most valuable asset in the building trade is undoubtedly that of experience, but that can only be obtained by the devotion of many years of hard work to the industry itself, and in order to profit from the experience gained in the early days it is essential to study every aspect of the work from well-written books which present the results and the experience of other persons. We consider this little volume an excellent one, which will give the reader a real groundwork in office organisation as applied in the successful contractor's business.

Building Construction Plates. Parts I & II. By A. BUCHANAN and W. H. HUDSON. (London: B. T. Batsford, Ltd., 94, High Holborn.) Part I, price 5s.; Part II, price 5s. 6d.

These plates are primarily intended for use in classes, and the two volumes cover one hundred and twelve plates—the first section dealing with the elementary course, and the second being devoted to more advanced subjects. The drawings generally are well presented, and a blank page is provided opposite each plate for the student's class notes, which should prove very useful. It would have been helpful in many cases if more dimensions had been given, although this would probably have necessitated additional space for some subjects, as the diagrams are too crowded on many plates to permit of other figures or particulars. The absence of detailed descriptive notes for the guidance of the student will prevent the extensive use of these plates outside the class-rooms, and the value of the volumes would have been considerably increased if the blank pages had been devoted to explanatory notes on each subject, with sufficient sizes and general information to allow the student to work intelligently at home, while these notes would also have been very useful for reference.

(For rates of wages in the Building Trade in Scotland, see page 124.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

Competitions.

(See Competition News, page 94.)

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; R.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ABERDARE.—A new national school is to be erected for the parish, at an estimated cost of £5,000.

ALFRETON.—The U.D.C. propose to erect eight houses at Alfreton four at Swanwick, and sixteen at Somercotes.

ASHTON-UNDER-LYNE.—The Housing Committee of the T.C. propose to acquire the remainder of the land comprising the Heys estate.

BANGOR (IRELAND).—The Council has received formal sanction to the borrowing of £32,000 for the building of 64 houses on the Claudeboye-road site.

BATH.—The City Engineer reported that in connection with the road works it was found necessary to lay a new foundation at an estimated cost of £500, which the sub-committee recommended, at the Lower Borough Walls.—Plans passed: Amended plan, 17 houses, Second-avenue and Canterbury-road; 10 houses, Chaucer-road.

BECONTREE.—The L.C.C. recommend that the supplemental estimate of expenditure on capital account of £450,000, submitted by the Finance Committee in respect of the development of a section of Becontree, near Gale-street, to cover the cost of the erection of about 725 additional houses, including the construction of the necessary roads and sewers, be approved.

BEDFORD.—The Elstow-road school site is to be fenced at a cost of £730. East Lodge is to be purchased for £2,250 and converted, at a cost of £500, into a special school for defectives.

BIRKENHEAD.—The Corporation propose the erection of 33 houses on the Derby Park estate, at a cost of £16,343. The Corporation have now allocated a site forming part of the old water-works at the junction of Balls-road and Slaty-road for the erection of the proposed art gallery. The Borough Surveyor has prepared plans for a fire station to be erected. A committee are considering the provision of alternative accommodation for people who will be displaced by clearances. The M.H. have sanctioned further housing developments on the Dell estate. A scheme for the provision of a model yacht lake to cost £4,220, has been prepared as a relief work. The provision of a garage at the central depot is recommended at a cost of £11,500.

BIRMINGHAM.—An operating room block is to be provided at the Rubery Hospital, at a cost of £3,000. The Corporation has now completed the purchase of the Colleshall Hall estate of 180 acres and tenders are to be invited for adapting the hall to accommodate 80 patients and erecting villas to accommodate 210 patients. The Ministry of Health has sanctioned a loan of £100,000 for housing schemes.

BLYTH.—The Borough Engineer submitted a report, with details, plans and estimates, for the construction of a bathing pool, at an estimated cost of £7,000, on the site west of the new promenade, which the T.C. approved. The Town Clerk is to apply to the M.H. for approval of the scheme and for sanction to borrow the necessary monies.—The Council recommend that application be made for £7,500 for housing grants.—The Borough Engineer submitted plans lay-out and report in connection with the erection of 50 houses on the housing estate, and estimated the cost including cost of land, road-making, sewerage, drainage, paths and fences to be £25,000, which was approved. The C.B. recommend that 30 of the houses be erected by direct labour and that tenders be invited for the erection of the balance.—The Town Clerk is to apply to the M.H. for sanctions to borrow the monies for the several purposes referred to in the estimate of the Borough Engineer.—Application is to be made to the M.H. for subsidy in respect of the 50 houses.—The Borough Engineer reported that of the land acquired by the Council, 3.32 acres would be required for the erection of the 50 houses. The C.B. recommend that the site comprising the Albion Brick Yard and other land of an area of approximately 4.95 acres, be purchased at a cost of not exceeding £1,000 per acre for the purposes of a town depot and destructor.

BLACKPOOL.—The C.B. instructed the Borough Surveyor to prepare a scheme for a tram shelter, with clock tower, proposed to be constructed at the Gynn-square.—Plans passed: School, Marlborough-avenue, for the Governors of Baines' Charity; 12 houses, Kenwood-avenue and Langfield-avenue, for Abson Bros.; 10 houses, Fairfield-road, for J. R. Fielding; 33 houses, off Granby-avenue, for J. Fielding & Son; eight houses, Bedford-avenue, and seven houses, Holmfied-road, for T. Bannister & Sons.

Good; 21 lock-up garages, rear 157, Markhouse-road, Presland's Stores.—The Essex E.C. recommend the spending of £230 for repairs to the Commercial Secondary School.

WANDSWORTH.—The Council recommend that tenders be invited for the erection of 14 self-contained flats on Blackshaw housing site in accordance with the approved plans and specification.—The Council have considered the report of the Borough Engineer with regard to the proposed reconstruction and extension of the Town Hall, and have given instructions for tenders to be invited for carrying out the work.—The B.C. has received sanction from the L.C.C. for the borrowing of the loan of £49,500 for the erection of 80 houses on the Southfields and Furzedown Housing Estates.—Plans passed: Chapple & Utting, 18 houses, Gracefields-gardens, Streatham; Waters, Ltd., 14 houses, Sherwood Park-road, 18 in Helmsdale-road, 24 in Bridgewood-road, 25 in Grayscroft-road, 17 in Streatham Vale-road, and 110 in Glenister Park-road, Streatham; Chapple & Fulford, four houses, Abercain-road, Streatham, eight in Bencroft-road, 26 in Cranmore-gardens, 46 in Donnybrook-road, and 22 in Streatham-vale; J. Jarvis & Sons, Ltd., electric sub-station, shops, &c., at 214 to 216, Balham High-road; A. Watson, tennis pavilion, path leading from Kingsmead-road to Hillside-road, Streatham; Holloway Bros. (London), Ltd., 10 houses, Ellerton-road, Springfield; G. S. Cook, 20 houses, Crowborough-road, Streatham; 18 houses, Greyhound-lane, Streatham; 49 houses and 15 houses, Walrond-street and Ribblesdale-road, respectively.

WESTCLIFF-ON-SEA.—A new church and school is to be erected in Westborough-road, to seat 400 persons. Plans have been prepared by Mr. H. Kelsall Armitage, Haverstock-hill, Belsize-park, N.W.3. The quantity surveyor is Mr. T. Sumner Smith, F.S.I., 25, Cross-street, Manchester.

WEST HARTLEPOOL.—The T.C. has decided to proceed with a scheme for the erection of a shelter at the south end of Seaton Carew, at a cost of £2,500.

WEYMOUTH.—The Corporation have decided to consider a scheme for the provision of public baths.

WHITEHAVEN.—Steps are to be taken to acquire the old Infirmary, Howgill-street, for conversion into a central school. Plans are to be prepared for converting the part of the basement of the baths, formerly used as Turkish baths, into a public convenience. Alterations are proposed at the Christ Church parish rooms.

WHITWOOD (YORKS.).—The Architects to the U.D.C. have been instructed to prepare plans and estimates for the erection of an ejector chamber and pump house at Cutsyke.

WILKLEY (YORKSHIRE).—The trustees are to enlarge the Whitley parish school at a cost of £500.

WIMBLEDON.—Mr. G. E. Scutt has prepared plans for a mission hall in Russell-street.—The Surrey C.C. are being asked to provide further facilities for secondary education in the district.—It is suggested that part of the Haydon's Recreation Ground should be allocated for the erection of a day nursery.—The Borough Engineer has prepared plans for the extension of the motor ambulance garage at the central fire station.—Mr. H. I. Merriman, F.R.I.B.A., has prepared revised plans for a building to be erected at the junction of the Ridgway and the Downs.

WORKSOP.—The U.D.C. decided to build 76 more houses at Manton, and to build any further houses nearer the centre of the town.

WORTHING.—The C.B. passed plans: Sixty-two houses, Reigate-road, for E. H. Barton; 11 houses, Pavilion-road, for J. Sandell & Sons.

YORK.—The question is under consideration of proceeding with the proposed roadway from Ousegate to Fossegate, and meanwhile the City Engineer is to prepare estimates as to the cost of the scheme. The Markets Committee has a scheme for covering in a portion of vacant land in Coppergate for use as a Corn Market.—The T.C. passed plans: Rowntree & Co., Ltd., tennis pavilion, Wigington-road; J. Terry & Sons, transformer house, Bishopthorpe-road; The Corporation, public library, Museum-street.

Fires.

HALIFAX.—Damage estimated at about £30,000 was caused by fire at Prospect Mills, Ovenden, Halifax. Messrs. The Prospect Mills Co. (Ovenden), Ltd., worsted spinners, were the owners.

Transport House, Smith-square, Westminster.

With regard to this new building, to which we referred in a recent issue, Messrs. Culpin & Bowers write to point out that the first contract (excavation) has been carried out by Messrs. W. F. Blay, Ltd.; the second contract (reinforced concrete piling and foundations) is in the hands of Mr. A. E. Frost; the third contract (steel frame) has been let to Messrs. David Colville, Ltd., and that for the super-structure has not yet been settled.

COMPETITIONS

THE criticism in our issue for June 26 of the designs submitted in the Manchester Art Gallery opens with a statement that the winning design has violated the conditions laid down by the assessors. This is an old complaint, and a complaint expected (but not answered) by those who attribute many things to tribal malevolence. The unsuccessful competitor always lays himself out to Lord Balfour's comment upon his critics during the war. "Possibly," he said, "we might have foreseen, had we been endowed with that wisdom after the event with which all honourable gentlemen have been in such large measure blessed by providence."

The architectural competition system seems to have rumbled through various stages with the slow certainty of a Juggernaut, but it still remains in much the same position, and it is not certain whether the end alone matters or whether the means signify as much as is pretended. There must be disappointments, and perhaps a tendency to expend too much inquisitorial subtlety detecting imaginary or trivial liberties with competition conditions. Allowances must, therefore, be made. There is a danger in taking too narrow a view of the duty of an assessor, in defining his attitude on a main issue. In a small competition, the result may hinge upon the positions of a staircase, or sanitary accommodation; but in the larger field there are, and must be, certain dominating factors which must be regarded and accepted in good faith both by the competitors and the assessors.

It is the plain duty of the critic to state his opinion, and if it coincides with the feeling of the majority of the competitors, every competitor, in fact, it is clearly worth further examination. It is obvious that, where awards are promised upon certain conditions, it is essential to evolve a definite form of procedure to be adopted where a competitor has broken the conditions, and broken them so handsomely that he has evolved the best solution—in fact, the "right" solution. This assumption may, or may not, apply in so definite a form to the Manchester Art Gallery competition; from the particular, the argument extends to the general. Our criticism admits that the winning design is a fine conception, and as this seems to be the general opinion, we may take it that "the disqualification of this brilliant design would have constituted a tragedy." So far as the end is concerned, if the work is proceeded with, the city of Manchester appears to be certain of a fine building, and it is only a domestic question for architects to work out amongst themselves whether the means signify only so far as they are effective.

From the assessors' point of view, there can only be two conclusions: (1) that the conditions have not been broken, and they have selected the best design; and (2) that they have broken, but they have selected the best design. If the assessors do not consider that important conditions have been broken, it is surely a simple matter to prove. The proof is a question of fact, and rests upon a true interpretation of the design's English. This is the general opinion amongst laymen, many of whom believe that architects are notoriously unbusinesslike, and that, when they have the chance of formulating conditions to produce the best architectural results, they fail to give satisfaction amongst themselves. If a practical question is allowed to remain as a matter of opinion, it leaves an ugly impression amongst laymen when the fact remains that a majority of competitors can interpret or misinterpret certain conditions.

After a number of inquiries on the subject, it appears that the impression conveyed to the layman is something like this: "I imagine that the requirements, areas, and so forth, have been drafted by the promoters and assessors. The solution may be somewhat in the nature of a puzzle, but obviously the solution cannot be impossible since the assessors must have worked out the requirements, and, if it is a puzzle, they hold the key. This is the nature of riddles that there should be a perfect answer to them if one had the wit to find it." The layman immediately comes to the conclusion that the assessors are the only ones who know what the promoters have in mind, and by giving

the award to a design which appears to break the conditions, they admit, it is thought, that their original ideas were faulty. There is something to be said for this rough generalisation. When and if conditions are flagrantly broken by a winning design, it proves this—if it proves anything—that the conditions imposed upon the competitors were ambiguous or unsound, and that the winner knew what the promoters and assessors wanted better than they did themselves. Unfortunately, a result of this nature does not prove that other competitors would not have produced even a better design than the winner had they broken the conditions too.

From the point of view of justice to the competitors, it is easy to say: "If I were the assessor I would without hesitation disqualify any design which violated the conditions," but it requires some courage to recommend a brilliant design which does not conform to conditions which you have helped to draft. It requires even greater courage to admit an error, if one has been made, and state the reasons why the end justifies the means. The solution which appears to many observers to be the fairest is for the assessor to award the premium to the designs which have produced the best results on the conditions laid down. "He should," a correspondent suggests, "inform the promoters that one of the competitors has submitted a design contrary to his (the assessor's) and the general interpretation of the conditions. He should state frankly that the general excellence of this design, whilst precluding it from securing a premium, clearly indicates that the ideal solution was not to be found in a literal interpretation of the conditions supplied to competitors. So far as the competition was concerned the breach could not be overlooked, but from the ultimate point of view neither could the architectural qualities of this particular design be overlooked. The procedure recommended would be to award the three premiums and invite the authors to compete again on amended conditions eliminating the restrictions which had been evaded by the one competitor who had produced the successful design. If this suggestion were adopted at least three of the competitors would receive justice, and if it be objected that the number is small it can be urged that they were the three best designs in the eliminating process. The promoters are certain of a fine building, since either the original brilliant design will again win or a better design will come from one of the three who have been chosen to compete on the same lines. By some such method as this there can be no question of unfairness or leniency, and a really great design is saved by the assessor and satisfaction is given all round."

Something may be said for the view that the competitor who has produced the finest design by avoiding the handicaps imposed by a rigid adherence to the assessor's conditions deserves his success from the fact he has had the courage of his convictions. But is courage the correct definition of this desire to stake everything on a hazard? Courage undoubtedly is required along with ability to detect the disturbing factors in the conditions, but the real risk is psychological, and is merely a question of how the assessor is likely to regard his duties and responsibilities. Competitors who are wise after the event may say that it was easy to detect the crucial points in the conditions, and that the real problem was to try to overcome them successfully. From any other point of view architectural competition work develops into the fine art of selecting and excusing little lapses from grace, on the plea that like Captain Marryat's baby, "It was only a little one." One advantage of the above suggestion lies in the fact that a competitor, in breaking the conditions to produce a brilliant design, does not suffer a hardship if he is fully aware that his design must eventually meet the competition of three others who have not taken the risks.

There are professions in which mobility of intelligence counts for a great deal, and to a certain extent, competitive work is one of them, but the architectural competition is least likely to give satisfaction to the competitors when fertility of design develops into evasion of what is troublesome in the rules.

NOTES.

The Fine Arts Commission.

WE shall be all agreed that a well-merited honour has been conferred on Mr. D. S. MacColl and Mr. Percy Scott Worthington by their appointment as members of the Royal Fine Arts Commission, to whose judgments they will add a real value which their personal attainments and worth guarantee.

"Architecture."

THE readers of *The Builder* and other papers are, we think, liable to forget that the quality of what they see in pictures and in print is a thing for which editors can only take a partial responsibility. As we have recently launched what is practically a new journal on the stream of architectural literature—which we are glad to see has been enthusiastically welcomed—we may perhaps be forgiven if, in our desire for the usefulness and well-being of our new offspring, we ask hypercritical readers, if there be any, to temper their judgments with mercy for the shortcomings of those who provide the matter and those who produce it. Seriously, we should like to point out that the public have not only interest, but actual property in a paper, for it is from them that the material comes. If anyone can encourage and help his fellows to a happier realisation of beauty and truth, whether in literary or artistic form, we can only say that it is our pleasant mission to place it before the public. In the last issue of *Architecture* the article on wormholes may suggest to us all a little more courage in trying to discover and improve development in modern craftsmanship. It is not a little disheartening that one so seldom sees anything in modern work and design so attractive and pleasing as the old pump, with its lead spout and panel, which we saw last week in the heart of Kent, or the carved wood spandrels in a wool merchant's house, with the daintily-

expressed symbols of his business. We are sure that the public is partly to blame for the apathy towards much excellent modern work which is being done because they have a hardened belief in the inherent beauty and merit of the wormhole. A short time since an architect we know, after trying in vain to meet with a Welsh dresser and a refectory table to furnish the dining-room of a new house he had built, for a client, came to the conclusion to try his own hand and produce something in character and scale to suit the room. The result was a saving of at least a hundred pounds, complete satisfaction of the client, and some very real, if somewhat shame-faced, satisfaction for the architect. Only last week we saw a charming little Chippendale card table which will easily fetch some seventy or eighty pounds, whereas there are people living, or trying to earn a living, amongst us who could produce an admirable piece of design and craftsmanship for half the money. There were no worm holes in the table, but it is the wormhole theory which creates its value.

The American Commonwealth Fund Fellowship.

THE inclusion of a student of architecture in the list of winners of American Commonwealth Fund Fellowships is an occasion, not only for congratulation to the winner (Miss Elsie Rogers, of Manchester University), but is also of importance to the cause of architectural education in general. It is to be hoped that, having established itself in this, the first award of these Fellowships, architecture will continue to hold its prominence amongst the studies which will receive sympathetic consideration when the annual awards are being made. To the student who, like Miss Rogers, has already had the benefit of travel study in Italy, a period of two years of the best academic tuition along with experience in the offices of the best practitioners in America, are opportunities such as few

have been lucky enough to enjoy. A substantial sum of £600 per annum intended to allow the holder to visit some of the great American cities where modern architectural problems may be studied. At the same time, facilities provided for personal introduction of many of the leaders in important phases of the industrial, commercial, academic and social activities of America. Following the far-seeing policy which inspired Mr. Cecil Rhodes to establish the scholarship which bears his name, this effort on the part of America adds a new advanced outlook upon the future educational values. Miss Rogers is heartily to be congratulated on being the first architect to be admitted to the precincts of such usefulness. We saw this week, on p. 150, a design by Miss Rogers.

Architecture and the Press.

ARCHITECTS have realised that until the Press interests itself at least as seriously with art as it does with

other arts—music, painting, literature and the drama—it will almost be impossible to stir the public apathy, naturally enough the public apathy encourages Press neglect, and hence in England, appear to move in a vicious circle. In this connection, it is gratifying to note that one of the leading papers in Ireland devotes two full columns about once a fortnight to problems of building and construction, and illustrates new buildings with excellent diagrams and photographs. Perhaps the public is awake to its architectural responsibilities, or perhaps the paper in question is determined to kindle public interest. In either case, it is of good augury that it is certain that, if architectural knowledge, criticism and news are provided, they will quickly create their own demand and begin almost at once to raise the standard of architecture.

Selection
by the
Press.

THE illustration and description of current work treated as a normal feature in the lay Press could be a powerful agent in improving the standard of design, but to this end it would be necessary for the papers to exercise discrimination as to the buildings selected for illustration. Most people would be only too glad to see their new factory, shop, or housing scheme, illustrated and commented on, but such notice would be still more highly prized if it carried the implication that the building was regarded as a good piece of architecture.

Public
Safety
and the
L.C.C.

PERSONS who have watched London fires have doubtless observed on many occasions the efficient protection afforded by party parapets against the spread of flames from one roof to another. Happily in the case of iron and concrete roofs this danger is almost nullified. But the use of timber or roof construction in ordinary dwelling houses is still prevalent and in outlying localities the omission of the protective parapet is often the rule rather than the exception," says a correspondent. "The consent of the London County Council to this innovation has necessarily been granted; also the unbroken roof surface may be seen extending over rows of houses erected by the Council at the public expense. In view of the involved risk to life and property the wisdom of this procedure may well be doubted."

A Legal
Question.

THE carrying up of party walls above roofs is enjoined in Section 59 of the London Building Act, 1894. The words are: "Every party wall shall be

carried up," &c., and there is no such proviso as "except with the consent of the Council." The same correspondent asks us, seeing that the procedure relates to new buildings, whether the Council is not in these cases acting *ultra vires*? This is a question which we prefer leaving to be answered by legal experts.

St.
Katherine
Coleman.

EVERY time an old church with its adjacent graveyard disappears from the city we must be conscious of some loss of pictorial and historic interest. The dusky brick tower of St. Katherine Coleman, flanked by the plane trees in its little churchyard, makes a very pleasant picture in the summer sunshine, and we must regret that the pursuit of wealth inevitably steals from us such desirable possessions. Notwithstanding its uncompromisingly square tower, the verdict of our modern architectural judges would not agree with the quotation of an earlier criticism which stated that "no parish in the Metropolis would now allow such a piece of ugliness to be erected."

From a Sketch by MR. T. RAFFLES DAVISON.

GENERAL NEWS

Professional Announcement.

Mr. Stephen Wilkinson has been appointed consulting architect to the L.N.E.R. system. The appointment takes effect from January 1. Mr. Wilkinson proposes to start private practice with offices in York, London and Leeds.

Partnership and Change of Address.

Mr. H. D. Sugden, A.R.I.B.A., has moved his office to 10, Conduit-street, W.1, and has taken into partnership Mr. B. W. K. Goode. The practice will be carried on in the name of Sugden & Goode, Architects.

New Lambeth Bridge.

London County Council is to proceed with the construction of the new Lambeth Bridge, and the execution of the improvements at the Lambeth approach, for which powers have been obtained. The estimated cost of the works is £668,000.

Widening the Strand.

In connection with the widening of the Strand, a report of the Improvements Committee states that for the acquisition of property between George-court and Villiers-street £400,000 is required.

Scarborough's New Bridge.

Scarborough Corporation has received an official intimation from the Ministry of Transport that a Government grant of £111,000 will be made in respect of the new bridge over the valley at Scarborough, which is to cost £171,874.

Liverpool Cathedral.

A start has now been made with the next stage of the building operations at Liverpool Cathedral—the erection of the central space and the two western transepts. The central space is to be carried to a height of 167 ft. above floor level. It is estimated that the portion of the work now to be begun will occupy from six to seven years.

Arms of Philip and Mary in Founder's Window, Ironmongers' Hall.

MR. REGINALD BELL, Glass Painter.

Bristol University Entertains Workmen.

A number of the foremen and workmen engaged upon the erection of the new buildings of Bristol University were recently entertained to a supper. The Vice-Chancellor, Mr. T. Loveday, presided, and was supported, amongst others, by Sir George Oatley, the architect.

University Buildings, Aberdeen.

The Executive of the Carnegie Trust for the Universities of Scotland has made the following grant to Aberdeen for the next quinquennium, 1926-1930: for the new Examination Hall at King's College, £15,000; for a new Students' Union, £20,000.

Rome Scholarship in Engraving.

The Council of the British School at Rome, on the recommendation of the Faculty of Engraving, have awarded the Rome Scholarship in Engraving for 1925 to Mr. Geoffrey H. Wedgwood, a student of the Royal College of Art. Mr. Wedgwood, who is twenty-five years of age, was born at Leek, Staffordshire, and was formerly a student at the Liverpool City School of Art.

Changes at Lord's: £50,000 to be Expended.

The extensive changes recommended by the M.C.C. Committee for the provision of seats for the public and members at Lord's, have been approved. The alterations comprise an extension to Stand "G" westwards, to include a new grand stand in place of the present building, and the roofing of the northern end of the Mound Stand. These additions will provide about 3,000 additional seats. The cost is estimated at £50,000.

Waterloo Bridge.

The Franco-British Union of Architects, at its annual general meeting in Paris, passed a resolution to the effect that a letter should be addressed to the Royal Institute of British Architects, by which the union should express its profound regret at the proposed demolition of Waterloo Bridge, and expressing the opinion that it is desirable to take all possible measures to maintain and safeguard this historic monument, which is of great artistic value.

Obituary.

We regret to record the death of Mr. F. W. Tarring, Fellow of the Royal Institute of British Architects for 50 years. Although he did not practise himself to any great extent, his father had a very large practice and was the first architect, we believe, to persuade Congregationalists and Baptists to build their places of worship in the Gothic manner. He was the architect for the Farringdon Memorial Hall, and a great many dissenting places of worship around London and various parts of the country. Mr. Tarring and Mr. Stark Wilkinson (his partner) were the architects responsible for the original design of the "Three Nuns," Aldgate, and Messrs. Doulton's premises on the Albert Embankment.

Mr. Brangwyn's Offer to Wales.

Mr. Frank Brangwyn, R.A., has offered to the Welsh National Museum a number of his finest works. The offer, which has been conveyed to the Council of the Museum by Mr. Arthur Howell, director of St. George's Gallery, Hanover-square, is made on certain conditions, one of which is that the pictures shall have a room devoted to them to be known as the Brangwyn Room. The works offered are valued at about £20,000, and include a large cartoon, which is the original of a mosaic in one of the churches in Leeds.

MEETINGS

Friday, JULY 24.

Architectural Association.—Annual Prize-giving by the Rt. Hon. Lord Eustace Percy. At 34, Bedford-square, W.C.1. 3 p.m.

Saturday, JULY 25.

Edinburgh Architectural Association.—Visit to Edinburgh buildings in progress—Forsyth's, MacVittie's, and bank buildings, Hope-street.

COMPETITION NEWS

Stockbridge.

The following awards have been made in competition for proposed public hall and baths:—First prize, £25: Mr. G. Wishaw Swansea; second prize, £15: Mr. Horatio Slack, Gorton, Manchester; third prize, £10: Mr. H. C. Garland, Market Place, Manchester.

Newark New Nurses' Home.

The Board of Management of Newark Hospital have decided to accept the design submitted in the above competition by Mr. W. G. Watkins, F.R.I.B.A., of Lincoln. Other competitors were Mr. J. Saunders, L.R.I.B.A., Newark; Mr. W. Patterson, Lincoln; and Mr. L. C. Brewster, A.R.I.B.A., Nottingham. The assessor was Mr. Herbert T. Buckland, V.P.R.I.B.A., Birmingham.

Ottawa War Memorial.

The names of the seven successful architects in the first stage of the National Competition for the War Memorial to be erected at Ottawa, which Parliament has appropriated £20,000 to include four British, one American, and two Canadian firms. The British architects are Mr. Lodge, of Bedford-square, London (with Mr. Rosslyn, sculptor); Mr. Vernon March, of Farnborough, Kent; Mr. F. Brook Hitch, of Queen's Terrace, London; and Mr. Wm. J. Smith, of Croft Hill, Glasgow.

Town Hall, Johannesburg.

The British Trade Commissioner at Johannesburg has sent home a report from the clerk of the Municipal Council of Pretoria, concerning the erection of a new Town Hall in that city. It is stated in the minutes that competitive designs will be invited at a cost (first estimate) of about £200,000. Application to the Department of Overseas Trade, 5, Old Queen-street, London S.W. 1.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending date, and second the issue of *The Builder* in which full particulars were given):—Argentine Institute (Dec. 31; April 24). Copenhagen Bridge (Sept. 1; April 24). Newcastle Bridge and Police Station (Oct. 8; June 12). Dr. Men Bridge (Oct. 1; May 29).

Arms of George V.—Founder's Window, Ironmongers' Hall.

Leicester War Memorial.

SIR EDWIN LUTYENS, R.A., Architect.

SOME OF THE NATIONAL PAVILIONS AT THE PARIS EXHIBITION

By G. D. GORDON-HAKE.

A STUDY of the national pavilions at the Paris Exhibition of Modern Decorative and Industrial Arts affords an opportunity of gauging the newer movements in design in each country. The stipulation that these buildings should be modern in treatment, rather than traditional, presented a pretty problem to the architect. Unfortunately there are one or two examples of too strict an adherence to the past, which robs the pavilion of the special interest one hoped for.

Italy, for instance, is represented by probably the most costly pavilion, standing beside that of Great Britain, and almost dwarfing it by its monumental and solid classic mass. The building is decorated with an order and cornice, treated certainly with a breadth of freedom, and having all the appearance of a permanent edifice. In view of what Italy is doing in modern design, this is disappointing. The pavilion for that reason hardly falls into line for comparative criticism.

Our British Pavilion is causing a refreshing amount of controversy. With the exception of our national arms in colour, cleverly placed at the apex of the parabolic arch of the main entrance, the Union Jack on the flag mast and the sailing merchant vessel weather vane, it certainly has little if anything to suggest its national origin. It is probably prophetic more than anything. A certain Scandinavian influence shows itself in the Pavilion, but be that as it may, the building is a delightful essay, which fully interprets the spirit of the Exhibition.

The restaurant adjoining (now christened the Prince of Wales) should be viewed in conjunction with the Pavilion, as they are obviously designed as a group. This can best be appre-

ciated from the other side of the Seine, from which point the playful river front of the restaurant can be seen at its best. The tent-like roof of coloured canvas, the projecting balconies and the double staircase leading to the landing stage, form a most pleasing composition which responds well to the brilliant sunshine. The cylindrical lamps designed round

Entrance to Danish Exhibit in Grand Palais.

The British Pavilion.

MESSRS. EASTON & ROBERTSON, Architects.

the square supports to the roofs are typical of the many original motifs introduced.

Of the other national pavilions, those of Sweden, Denmark, Austria, Czecho-Slovakia and Poland stand out either by reason of the daring architectural massing and treatment of detail, or by the telling restraint and "spotting" of decoration. The Swedish Pavilion for the latter reason is perhaps the most brilliant design in the exhibition.

The Pavilion of Denmark, by Kay Fisker, arrests one by its texture and monumental massing effect, which is obtained by a clever use of a small square site. The central portion of each side is carried up to form a Greek cross, the square corner rooms being kept low and top lit. The pavilion is built of brick, used in the traditional manner; alternate courses of $4\frac{1}{2}$ in. brick-on-edge of a reddish brown and $3\frac{1}{2}$ in. stretchers of white bricks set back 1 in. The joints are roughly $\frac{1}{2}$ in. wide and are flush. The internal decoration represents Denmark in a formalised modern mural treatment. One of the small corner rooms is most effectively treated as a pictorial map of Denmark showing the various attractions open to the tourist. This is the work of an architect, Jacob E. Bang, in collaboration with Kay Fisker.

Perhaps the most typical pavilion is that of Soviet Russia. Two awkward flights of steps lead one to the upper floor where there is no justification for this quasi-monumental approach. The pavilion does not raise itself out of the category of building. Of the exhibits one can be less condemnatory. There are some beautiful textiles and ivory work, including chess sets with kings and knights replaced by peasants and artisans. A highly coloured wooden structure intended presumably for a tower will probably mislead many visitors as to the locality of the amusement park.

The architecture of the exhibition is, on the whole, refreshing; the setting and lay-out, as always in Paris, almost ideal. One comes away more than ever convinced of the inseparability of art and everyday life.

Wren Church Roof in Danger.

The Wren church of St. Peter-upon-Cornhill, E.C., has been attacked by the death watch beetle, and is to be closed throughout August for repairs.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Manchester Art Gallery Competition.

SIR,—I was not a competitor, nor do I possess sufficient knowledge of the ground of complaint to be able to offer an opinion upon the assessors' award. I write merely to point out that several of your correspondents create the impression that they defend the decision simply because they think it is "not cricket" to question it. To reason thus seems to be unfair both to cricket and the architectural competition. Cricket has its rules, but the point is they are adhered to. I think it was the late Maurice Hewlett who wrote in one of his essays: "I will play with anybody at anything up and down the world, but I must know what game it is we are playing." Clearly those who upheld the award do not grumble at the result, but they are trying to convey that they neither knew the rules nor the game they were playing. This would seem to be the only fair interpretation of the adverse criticisms. The obvious thing to do with a misunderstanding is to clear it up: to dismiss the subject under some misconception of chivalry in sportsmanship is the certain way to lose the confidence and respect of the public.

"INTERESTED."

SIR,—It was not, in the least, my intention that my criticism of the unsportsmanlike behaviour of a small minority among the competitors should appear anonymously. The pseudonym in the covering note was inserted because one signature at the end of my communication seemed sufficient. I shall be obliged if you will publish this letter, so that there may be no doubt as to my identity.

Is it possible to hope that "Critic" will follow a similar course?

GILBERT H. JENKINS.

[Other letters are unavoidably held over until next week.]

Roman London.

SIR,—It is only too well known by those who try to piece together the story of London during the Romano-British period, that during the last hundred years or more much that has come to light through deep excavation for rebuilding within the City area has been lost through falling into the hands of those who have only the faintest idea of their importance to the archaeologist and historian. Not long ago, in conversation with a weather-beaten old specimen of a watchman on a street excavation, I heard of, and a few days later secured, a portion of a fine "Samian" bowl dug up in Queen Victoria-street. On another occasion a short chat resulted in half-a-dozen Roman coins, and I have seen a collection of Romano-British pottery on a mantel-piece of a contractor's office which ought at once to have gone to a museum, but has probably vanished into some curio cabinet unlabelled, and therefore already shorn of three-quarters of its value from the archaeological standpoint.

Foundations of houses of the Roman period have been turned up in the City of London on many occasions. Now and then short descriptions of such discoveries have crept into the newspapers and recently, a better watch being kept, a measured plan has sometimes been made and preserved in proper hands, but much has only been casually noted down and is still out of the reach of anyone who wishes to reconstruct the story of London's greatness between the third and fifth centuries.

I would therefore appeal to all who know of any such discoveries to communicate with me at 1, King's Bench-walk, Temple, E.C. The information which they send may seem of small importance, but, added to that which is known and recorded, it may help me in my efforts to make a more complete plan of Roman London which I am compiling for a book upon which I am now engaged. Information as to the whereabouts of Roman objects of any description which have been found in London will also be welcomed, for a potter's mark, a coin, or an inscription, if nothing more than a roughly-scratched graffito, may help to prove or disprove certain ideas at present held.

GORDON HOME (Major).

Devonshire House Flats.

We publish this week some elevational details of the new Devonshire House flats, Piccadilly, which are being erected from the designs of Mr. Thomas Hastings (Carere & Hastings), of New York, and Professor C. H. Reilly, of Liverpool, joint architects. Perspective drawings of the flats were included in our issue of January 2, when some descriptive notes were also given.

Manchester Art Gallery Competition.

We publish this week the third premiated design in this competition by Messrs. Alfred W. S. Cross and Kenneth M. B. Cross. The winning design was given in our issue for June 12 and 19, and the second premiated design in our issue for June 26. As stated in the criticism of the designs that appeared in *The Builder* of June 26, the authors of the design placed third rigidly adhered to the printed conditions of the competition. It was thought that the problem of the axis and alignment of the building in connection with the proposed treat-

ment of the general lay-out of the open space could best be met by placing the front of the main building at right angles to a central axial line traversing the open space from east to west, and a rectangular and symmetrical type of plan was selected as being the form most suitable to a dignified Classic treatment worthy of an important public building in the City of Manchester. The clock tower which forms a dominant feature in the lay-out of the gardens is placed on the axis of a central line drawn through Oldham-street, a bronze fountain terminates the vista from Lever-street, and the statue of Queen Victoria occupies a central position on the main axial line adjoining Mosley-street.

The principal public entrance is approached by spacious flights of steps leading from the formal garden and carriage-way to a large entrance hall, whence short flights of broad internal steps lead on one side to the chairman's room and to the reception room and on the other side to an inquiry clerk's office and the director's and deputy director's rooms. The principal staircases are approached through spacious vestibules, from which both front and back access is gained to the large central sculpture hall, traversing the building from front to back. The central and dominating position assigned to the sculpture hall was determined by a desire to obtain a fine unobstructed internal vista from the front to the back public staircases; and the screen forming the gallery to the sculpture hall and masking the top-lighted recessed subdivisions for groups of sculpture, constituting in itself a series of canopied niches for single figures or smaller groups, was the outcome of one of the requirements of the competition.

With the exception of the Hall of Memory and of two small museum galleries for the Old Manchester and metal work collections which, placed on the first floor, are accessible by departmental staircases from the galleries on the upper ground floor the whole floor space of the first floor of the building is devoted to the requirements of the picture galleries, and separate galleries for temporary and periodical exhibition are duly provided in addition to main and subsidiary circulation. Very careful consideration has been given to the top side-lighted picture galleries, the lighting surfaces being so arranged that a flood of light is thrown upon the walls at picture height, and reflections are avoided.

The Hall of Memory, centrally placed between two parts of the back staircases, is quietly situated as required by the conditions, off the main stream of traffic.

The lower front entrance hall, which is lighted by four large wells for light formed in the floor above gives access (a) to the committee room and cloak room, (b) to the general office provided in connection with the administration office accommodation, and (c) to the public cloak rooms. It is also in direct communication with the central carriage or cartway entrance from the inner covered roadways.

The lower floor of the corresponding back block, fronting Portland-street, has a central entrance from the internal covered roadways, and its public staircases and cloakrooms are arranged in a similar manner. The lecture theatre and refreshment room are also planned in this block, whilst the required additional exhibition space is provided on this floor by spacious galleries, which have the best possible side lighting from large windows placed in the external wing walls fronting Piccadilly and Parker-street respectively.

Ample provision has been made in a centrally-placed building for receiving, storing, packing and dispatching sculpture, furniture, pictures, &c., in addition to workshop accommodation for framing, repairs, &c., and there is every facility for delivery and dispatch under cover. The boiler-house, filtration chamber and the engineers' workshop, &c., are placed in a corresponding central block.

It was found necessary to provide basements for:—

- (1) Kitchen under the refreshment room.
- (2) Lecturers' room under the lecture theatre.
- (3) Porters' mess rooms, &c., under the committee room.
- (4) Staff room and typists' room under the general office.

As to the external architectural treatment, the authors of this design have endeavoured to impart a suggestion of dignity and restraint to the elevations.

Ironmongers' Hall.

A DESCRIPTION of the new Ironmongers' Hall in Shaftesbury-place, Aldersgate-street, London, is given on page 151. — Mr. Sydney Tatchell, F.R.I.B.A., is the architect.

R.I.B.A. MINUTES.

Notes from the Minutes of the last Council Meeting.

Registration of Probationers.—On the recommendation of the Board of Architectural Education, it was decided that the Day School Certificate (Higher) Examination and the Leaving Certificate Examination of the Scottish Education Department (covering the required subjects), be included in the list of examinations recognised in connection with registration as Probationer R.I.B.A.

Exemption from the R.I.B.A. Final Examination.—Exemption from the R.I.B.A. Final Examination was granted to the School of Architecture, Edinburgh, for the five years' all-day course and for the six years' part-time course, subject to the usual conditions and to revision on the occasion of the next visit of the R.I.B.A. Visiting Board to the School.

R.I.B.A. Students and the "Journal."—It was decided that, in future, all Registered Students of the R.I.B.A. should receive the *Journal* free of charge.

Students of Recognised Schools and Office Experience.—In order to assist advanced students of recognised schools up to the stage of the completion of their qualifications for the Final Examination, it was decided to open a register of such students together with a register of the names of architects in practice who are willing to take such students into their offices for the prescribed period.

The Tasmanian Institute of Architects.—The Tasmanian Institute of Architects was admitted as an Allied Society of the R.I.B.A.

Examination Fees: Relegated Candidates.—It was decided that candidates relegated in the Intermediate, Final, and Special Examinations, who—under the present rule must pay the full fee of five or six guineas (as the case may be), for the third and subsequent occasions upon which they present themselves—should, in future, be required instead to pay a fee of ten shillings and sixpence for each subject in which they have been relegated, on each occasion upon which they present themselves for examination.

New Class of "Subscribers."—The first applications for election to the new class of "subscribers" were received and approved.

BARTLETT SCHOOL OF ARCHITECTURE AWARDS

The following awards have been made in the Bartlett School of Architecture at University College:—

BARTLETT ENTRANCE EXHIBITIONS.—Edna M. L. Mills, Brighton and Hove High School; Harold F. Hoar, Latymer Upper School, Hammersmith.

HERBERT BATSFORD PRIZE (First Year Classes).—E. Somake.

CERTIFICATES IN ARCHITECTURE.—F. S. Bardell, G. R. Cochrane, Margaret A. de Quincy, H. T. Dyer, L. P. Ellicott, E. Forster, Jessie M. Greig, H. Kendall, D. H. Mirams, C. G. Weald.

SUB-DEPARTMENT OF TOWN-PLANNING: LEVER PRIZES.—First, C. D. J. Benton; second, L. M. Chitale and S. L. G. Beaufoy (equal).

CERTIFICATES IN TOWN-PLANNING.—S. L. G. Beaufoy, A. J. E. Benton, C. D. J. Benton, L. M. Chitale, Gertrude W. H. Leverkus, B. A. Moss.

The following further awards have been made:—**Donaldson Silver Medal.**—H. A. Johnson. **Lever Prizes in Architecture.**—First, J. N. Summerson; second, H. T. Dyer and L. C. Stokes (equal). **Ronald Jones Prizes.**—Medieval Architecture: A. C. Light. Renaissance Architecture: P. A. Wailes. "Architects' Journal" Prize for Design.—L. P. Ellicott.

UNIVERSITY OF LIVERPOOL EXAMINATIONS

The Examination Lists of the University of Liverpool School of Architecture for July are as follows:—

Faculty of Arts.

DEGREE OF B.A.RCH.—FIFTH EXAMINATION.—Honours in Architectural Design: Class I.—F. N. Astbury. **Class II.**—H. L. Barton, C. A. Minoprio, T. T. Wills. **Honours in Architectural Construction: Class II.**—C. C. Shaw. **Ordinary.**—L. C. Howitt, H. G. Phillips, H. A. Peters.

FOURTH EXAMINATION.—H. L. Barton, Norah Dunphy, C. A. Minoprio, H. G. C. Spencely.

THIRD EXAMINATION.—E. F. Davies, G. A. V. Hall, R. G. Heal, May Hutchinson, K. R. Mackenzie, G. A. Ridge, M. Z. el Tawil, Olwen Vaughan.

SECOND EXAMINATION.—S. J. Docking, W. A. Eden, H. G. Ellis, G. C. Hough, H. H. Powell.

FIRST EXAMINATION.—N. Bodhiprasad P. G. Freeman, H. H. Wilkinson, R. A. Williams, L. Wright.

DIPLOMA IN ARCHITECTURE.—FIFTH EXAMINATION.—Distinction in Architectural Design: Class I.—F. H. Crossley, Frances T. Silcock, H. Thearle. **Class II.**—Maud A. M. Wall. **Ordinary.**—H. B. Evans, M. Roushdy.

FOURTH EXAMINATION.—G. A. Butling, F. H. Crossley, M. Roushdy, A. C. Todd.

THIRD EXAMINATION.—W. R. Alderson, A. C. Cotton, W. H. G. Dobie, D. Hall, T. C. Haynes, J. H. Isherwood, O. Lewis, I. D. MacGillivray, J. B. Maxwell, J. G. Metcalfe, Marjorie M. Mocatta, C. E. Moore, H. B. Stout, B. A. Sumner.

SECOND EXAMINATION.—H. Bramhill, A. J. Davidson, P. J. Doran, A. Owen, H. T. Parry, D. B. Solomon.

FIRST EXAMINATION.—A. T. Ashworth, C. S. Brown, J. N. Cowin, Anne R. Dewson, E. G. Hearden, S. W. Kelly, G. G. Lance, F. Norman, G. J. S. Segar-Owen, S. Stern.

PRIZES AND SCHOLARSHIPS AWARDED.

Holt Travelling Scholarship (Third Year).—R. G. Heal.

Lever Prizes in Architecture (Third Year).—1st, J. B. Maxwell; 2nd, R. G. Heal.

John Rankin Prizes in Architecture (for Sketch Designs during Fourth and Fifth Years).—Fourth Year: G. A. Butling. Fifth Year: F. H. Crossley, C. A. Minoprio, H. Thearle.

Holland & Hannen and Cubitts' Prizes (for Working Drawings).—First, H. Thearle; second, Thelma Silcock.

White Star Line Prize.—C. A. Minoprio.

Rome Scholarship in Architecture.—G. A. Butling.

R.I.B.A. (Henry Jarvis) Studentship.—C. A. Minoprio.

THE IRONMONGERS' HALL

THE new hall of the Worshipful Company of Ironmongers, of which we publish a number of illustrations in this issue, has been erected in Shaftesbury-place, Aldersgate-street, from the designs of Mr. Sydney Tatchell, F.R.I.B.A., who holds the appointment of surveyor to the Ironmongers' Company. The building is in the Tudor style, which was decided on for its seemliness for the housing of an ancient guild. Mr. Tatchell has sought, very successfully, we think, to recapture the atmosphere of the Tudor period, though without any suggestion of mere copyism; the work is full of interest and has much original charm and freshness.

The site is **7** shaped, the upper arm being due north and south, and the lower arm east and west. The planning was in large measure determined by the approach from Aldersgate, the necessity for obtaining a sunny aspect for those rooms which are in permanent use by the clerk and his staff, and the maximum of light and air in a building in a somewhat restricted area surrounded by ancient lights.

The basement contains the strong rooms for the archives and plate, the wine cellar and store rooms, the heating chamber, vacuum cleaner plant, waiters' room, and other offices. On the ground floor are planned the entrance vestibule, hall, cloakrooms, luncheon-room, and lower buttery, the clerk's room, and those of his staff and the Court Chamber. The hall has a fireplace in oak and stone, filled with an old dog-grate and a fine example of a Sussex fire back. In the south-east corner of the site are the cloisters and fountain court, looking into which are the luncheon-room and the Clerk's room. The pool and the central pillar of the fountain are stone, the pillar being surmounted by a cast lead bracketed bowl, in which the famous lizards of the Company support the water nozzle. An electric passenger lift connects all floors,

and in addition to the grand staircase, which serves between the entrance hall and the reception rooms on the first floor, there is a secondary staircase for the beadle and his staff. Electric goods and service lifts are provided, together with an outside fire escape staircase, with suitable exits from each floor.

The reception landing, drawing-room or library, and the banqueting hall with its buttery are on the first floor. The lighting of the banqueting hall, and indeed of the building throughout, is electric. The crystal chandeliers have come from the old hall.

The great kitchen and beadle's quarters are on the second floor, and in the space over the banqueting hall is the Great Garrett (so named after an Inventory of 1553), which contains the dressing rooms for the Master, Wardens, and Members of the Court.

Features of special interest are bronze casements and multifarious examples of leaded lights and stained glass windows. The last-named include the arms of the City of London, of the Ironmongers' Company, and of many a Past Master, as well as a number of quaint little pictures depicting figures, such as Saint Lawrence, Saint Dunstan, and bygone craftsmen at work in forge and foundry.

The hall is erected on a reinforced concrete raft, which covers the whole site. Fireproof construction is used throughout and the building is, in addition, protected on the outside by drenchers, which operate automatically should a fire occur in surrounding property.

The heating is by low-pressure hot water; the cleaning by vacuum is controlled by an electric motor in the basement and operated at hydrant points distributed on the several floors; the ventilation of the luncheon-room, Court Chamber, and the banqueting hall is obtained by inlets of fresh air and by exhaust fans. The cooking is by gas. Inter-communicating house telephones are installed throughout.

English oak is used for all the panelling, the grand staircase, and the joinery generally on the principal floors. Thin hand-made bricks from the Daneshill Works near Basingstoke are employed on the Shaftesbury-place frontage, and in the fountain court; and Portland stone is used for the windows and doorways.

The general contractors were Messrs. Holland & Hannen and Cubitts, Ltd., and the following is a list of the sub-contractors: Electrical work, Jacob, White & Co., Ltd.; plumbing and sanitation, Durbin & Katesmark; constructional steelwork, Redpath, Brown & Co., Ltd.; asphalt, French Asphalte Co., Ltd.; roof tiling, Ames & Finnis; red facings, Daneshill Brick & Tile Works, Ltd.; locks, Hobbs, Hart & Co., Ltd.; cooking apparatus, Benham & Sons, Ltd.; service and goods lifts, James Ritchie & Sons; passenger lift, Waygood-Otis, Ltd.; jointless flooring, Bell's United Asbestos Co., Ltd.; oak and wood block flooring, Hollis Bros., & Co., Ltd.; floor tiling, J. C. Edwards; wall tiling, Martin van Straaten & Co.; gun-metal casements, C. E. Welstead, Ltd.; steel casements, Crittall Manufacturing Co., Ltd.; skylights and prismatic glazing, British Luxfer Co.; lightning conductors, J. W. Gray & Co.; vacuum cleaning plant, British Vacuum Cleaner Co., Ltd.; ventilation, James Keith & Blackman Co., Ltd.; automatic drenchers and fire appliances, Mather & Platt, Ltd.; fireproof floors, Kleine Patent Fire-Resisting Flooring Syndicate, Ltd.; escape stairs, George Wright (London), Ltd.; strong room doors and safe, Chatwood Safe Co., Ltd.; Akoustolith tiles, Building Products, Ltd.; sanitary fittings, John Bolding & Sons; secondary staircases, Patent Impervious Stone Co., Ltd.; internal paints and enamels, Wm. Harland & Sons; external paints, Indestructible Paint Co., Ltd.; steel cupboards, &c., Estler Bros.; electric light fittings, Burt, Escaré & Denelle; tapestries and curtains, Wm. Morris & Co., Ltd.; cast-lead work, J. L. Emms; cast-iron work, Thomas Elsley, Ltd.

The following craftsmen were engaged on the work: Stone and wood carving, George Alexander; heraldic glass, Reginald Bell; modelled plaster, George Jackson & Sons, Ltd.; wrought-iron work, F. G. Frost and Bainbridge Reynolds.

TOWN-PLANNING INSTITUTE

MR. W. T. LANCASHIRE (President) took the chair at the annual meeting of the Institute, held at 92, Victoria-street, S.W., when the accounts were adopted and the Council elected.

A motion by Mr. J. W. Mawson to the effect that a paragraph in one of the Articles dealing with the constitution of the Council should be deleted was discussed. The present article provides that the Council shall consist of twelve members, of whom three at least shall be members of the Royal Institute of British Architects, three members of the Institution of Civil Engineers, or the Institution of Municipal and County Engineers, and three members of the Surveyors' Institution. Mr. Mawson contended that the time was ripe for the deletion of such a provision, and that the Town Planning Institute should stand as the body for dealing with town-planning matters. The motion was eventually withdrawn.

President's Address.

The President, in his retiring address, summarised the activities of the Institute during the year, and dwelt on the success of the provincial Conference at Leeds. He suggested that it might be possible to keep the fires of enthusiasm and interest burning brightly by rather more often giving opportunities to country members by the holding of meetings in large provincial centres. He was glad to say there had been a large increase in the number of candidates for the examinations. Mr. Lancashire referred to the action taken by the Association in regard to Thames Bridges, London Traffic, and the initiation of a regional policy for London and the home counties, and in conclusion said he should do all he could to further the interests of the Institute, as he believed it was doing good work for the country and all concerned.

A hearty vote of thanks was passed to the President.

Traffic, Zoning, &c., in the United States.

Messrs. Barry Parker, G. L. Pepler, and R. Unwin, the delegates of the Institute at the International Conference on Town Planning held in America, gave some of their impressions of traffic, zoning, parks and design in the United States.

Mr. Barry Parker, who dealt principally with the city parks of America, said the idea of the freedom of the individual had been the dominating and controlling idea in American institutions and civilisation. To this had to be added a too great appreciation of the merits of the "practical man" and of what were called "practical" ideas. American habit in the past had been to tackle each problem as it arose, and to try and find a solution of that immediate problem, without much consideration as to other problems which the solution arrived at might create. He would give them an example: Finding a problem created by there being more people in the closely packed hearts of cities than could be accommodated there, a solution was found by increasing the heights of the buildings. This created another problem. The buildings now held more people than the streets could accommodate. The immediate solution of this problem was to improve means of transit and methods of transporting people. The owners of subways, elevated railways, buses, ferry-boats, bridges, and what not faced this problem to find an immediate solution of it. They proposed improvements in the facilities they offered, but before doing this they estimated carefully that the increased number of people their improved transport facilities would bring into the hearts of cities would render the improvements remunerative to them. So the cities found themselves with greater congestion in their streets than ever, and faced with the problem of accommodating an increased number of people in the hearts of the cities. They still further increased the heights of the buildings, producing worse congestion in the streets. This they met again by improving means of transport, and so they went round and round a

vicious circle seeking for an immediate solution of each problem as it arose, but not seeking where their solutions led. In all this they saw the dominant idea of the rights of the individual. The owner of a building must be allowed to raise that building to any height he liked regardless of the effect his doing this had on the streets and of the fact that his doing this transformed the streets into dismal canyons, and that by doing this he condemned others to lives spent among ill-lit surroundings, and largely without the benefits of sunshine. The owners of means of transport (ferry-boats, bridges, subways, elevated railways, buses, cabs, &c.) must be allowed to improve these means of transport, in their own interests, regardless of the effect these improvements might have on the life of a city as a whole.

But a change was coming over the spirit and outlook of the American people, and it was in the provision of parks that this change first manifested itself. Public parks are not promoted for individual gain, they were promoted in the interests of a community as a whole. The park systems in American cities could not fail to arouse admiration in the minds of visitors. Chicago was to have a complete ring of parks and parkways round it and a lakeside park artificially created in the shallow margin of the lake. Philadelphia was to have a magnificent parkway leading right out from the centre of the city where the City Hall stands to the Fairmount Park, which stretched for miles, and for part of its length lies on either side of the Schuylkill River. New York had the Bear Mountain Park on the New Jersey side of the Hudson, and for Washington a splendid park system is planned.

Shortly after he arrived in America, he was told that the American spirit was embodied in the phrase, "Individual aggrandisement and collective irresponsibility." He believed that was once true, he did not believe it was so true to-day. Idealism and vision were to be found in America to-day. Americans were beginning to wish to get things done well instead of merely wishing to get things done. Americans were now prepared to listen to the "man of vision" and to take the "long view." They now put the community before the individual when community interests did not unreasonably restrict individual freedom. Therefore the United States of America bid fair to become the dominant nation of the earth. Continuance of the enormous cash saving she is making by having adopted prohibition would render this inevitable.

Mr. G. L. Pepler, who confined himself chiefly to the subject of traffic, said the chief impression that remained after listening to American experts and traversing the streets of a few of their cities, was in the nature of a warning of what we may expect, although probably not to the same intensity. They were told that in the United States every 1.9 families now possessed a car, and Mr. Goodrich expressed the view that probably saturation point had nearly been reached in respect to the number of persons per registered car, so that in future the increase in number of cars was likely to be constant, corresponding (in present proportions) to the increase of population. He expected traffic to increase as about the square root of the registration. In England, he believed there was one car to every seven families, but Sir Henry Maybury had recently told him that nearly 2,000 new owners were registering cars each week. Judging by a week's observation in New York, and by what one was told, in U.S.A. the proportion of heavy lorry traffic was considerably less than in this country. Also, he hardly saw any motor bicycles or side-cars. There was every indication, therefore, that there was likely to be a large increase in motor traffic in this country—at any rate, for a number of years—although, as the cheapest cars and petrol were less expensive over there and the tax much less, it was not probable that they would ever be as widely owned here as they were there. Nevertheless, it seemed certain that this country would to a considerable extent catch them up in the matter, and they

ought to profit by their experience and at once take steps so that they might avoid the impasse that America had now reached.

In some of their cities, the tall buildings aggravated traffic congestion in a way that happily they had not experienced over here, but, on the other hand, their streets were, on the whole, considerably wider than in England. Mr. Unwin had stated that the Chicago streets represented 40 per cent. of the area against 28 per cent. in the City of London. Also, the checkerboard plan of their towns simplified control of traffic, although it was so much slowed down in the process as often to make riding more slow than walking. In New York City they had three tiers—the subway, the roadway and the elevated—and all were jammed full and overflowing at the rush hour. Reference should be made to one feature of the subway, or underground railway. Because it was shallow, it was possible to get direct connection from it to the basements of some buildings so that those having business in such buildings as were connected could get there direct from the train, without having to traverse the street at all. Examples that might be quoted were The Equitable building, which accommodated 15,000 people, and for which, at the expense of the owners, a special underground footway was built from Wall-street Station. The platform of another station was lengthened to give basement frontage to one of the big stores. A number of the large hotels have direct sub-ground communication with the great terminal stations. The much greater depth of English Tube Railways made the same plan impossible here, but it seemed worth while considering whether sub-ground stations might not in some cases be constructed part way down the lift shafts, and subways for foot passengers carried therefrom to some of the great stores or theatres or hotels.

The parking of cars was, of course, an acute problem in most American cities. It had been found necessary to prohibit standing vehicles except in certain specified streets, so that even if one had a chauffeur he might have to keep on circulating the car round the block. The man with no chauffeur found his car of little use to him in the central parts of the big towns, because he probably had to park it so far from the place he wanted to stop at. The result of this was that one large store in Boston and another in New York were supplying private garage spaces for their customers, and large industrial concerns were having to do the same for their employees. In Chicago, the car-owners of the Loop area have appropriated a large open space that was set aside for a park, where 25,000 cars at a time were now parked.

What were the proposals for relieving the situation? Double-decked streets, super-highways, parkways, &c.; but what was clearly emerging seemed to him to be that expedients were futile. At best they could only be partial palliatives. A cure could only be made, and in our case disaster could only be avoided, by a definite new policy of town development based on decentralisation. Some of the palliatives were excellent in themselves, and far the most attractive to him was the parkway. The most famous of these, perhaps, was the Fairmount Parkway, Philadelphia, cut through acres of built-up property, at a cost of about \$19,000,000, to bring a great park to the centre of the city.

Informed opinion seemed, however, rapidly coming to the conclusion that expedients would meet the case, and that the only hope lay in a new town policy. There must be redistribution and decentralisation. In this country, in March, 1920, the Unhealthy Areas Committee, of which the Right Hon. Neville Chamberlain M.P. (Hon. Vice-President) was chairman, and that made careful investigation into the problem of congested and unhealthy areas, reported that "many of the factories now located in London might apparently have been placed elsewhere without any disadvantage to themselves, and we are strongly of opinion that... there should be encouraged the starting of new industries and the removal of existing factories to garden cities which should be founded in

the country where the inhabitants will live close to their work under the best possible conditions." The idea behind this in reference to traffic was to avoid unnecessary movement in and out of the large centre, by intercepting transport, as it were, and placing people in healthy and pleasant surroundings, but near to their work-places. There would then be elbow room to reorganise the centre, placing things in their right place, avoiding the internecine wasteful warfare that now took place between incompatibles, and allowing room for recreation. Towns would be of loose texture, but compact, and large belts of open country would be kept free from the spoliation that now threatened so much of the countryside near every large town. If this policy of redistribution and decentralisation was not adopted, but an added mixed congestion was allowed to pile on the centre, while it was further hemmed in by a still wider belt of houses and works, surely it was inevitable that decay would set in and ultimately the city would destroy itself.

Mr. Raymond Unwin said the progress of zoning and of interest in city planning since his last visit to America, two and a-half years ago, had been very remarkable. Both zoning and planning had now become normal activities of most municipalities. There are 300 zoning and planning commissions at work, and 325 or more cities and towns had adopted Zoning Ordinances. Two-thirds of the urban population living in towns of over 25,000 inhabitants now lived under the benefit of zoning regulation. To understand the development of zoning and city planning in America it was needful to realise that the people of the United States embodied their cherished principles in a written Constitution which, until amended, prevailed over any legislation, whether Federal or State, that was inconsistent with it. Article V of that Constitution contains the following: "Nor shall any person be deprived of life, liberty or property without due process of law. Nor shall private property be taken for public use without just compensation." While it was true that we had no similar written constitution limiting the powers of King and Parliament, it was well to remember that the Americans derived their principles of liberty and property largely from us, and it was at least possible that the clearly defined distinction which their constitution compels them to draw between regulations which could legitimately be imposed without compensation, and others which it

would be unconstitutional so to impose, might not be without value in helping us also to recognise the line which justice required, but which the omnipotence of our legislature allowed us to vary according to the view of the day. If the American town-planning legislation departed from the line as constitutionally laid down, that legislation could be set aside by the Supreme Courts. If our legislation moved the line, the Courts were bound by that legislation. Both systems had their merits and their dangers, but each could learn much from the working of the other.

When considering the application of zoning and planning to built-up areas in this country we would perhaps derive most direct help from American experience in three directions: (1) In regard to drawing the line between regulations which should, when reasonable, not give a claim for compensation, and those which it would be unjust to impose without compensation; (2) in regard to the constitution, powers, and working of suitable tribunals of appeal; (3) in regard to the practical difficulties which are likely to arise and the exceptional cases which must be provided for either in the Ordinance or by appeal. By frequent testing in the courts experts had acquired a nice appreciation of the dividing line between that which the individual could be required to do, or abstain from doing, in the interests of general health, safety and welfare, without interfering with his just liberty or property rights, and that which, however desirable, should not be enforced except with the consent of the owner or with compensation. In regard to this it was interesting to note that the constitution requires "just compensation," not any supposed value.

The Board of Appeals in New York seemed to be working well and establishing a good reputation for fairness and for decisions based on merits in spite of much interested pressure at times. A traditional method of meeting the most common difficulties was growing up, a sort of case law or precedent. Difficulties arose mainly along boundary lines between zones where the sharp distinction between business and residence zones may cause hardships in various ways. The last residential plots would not sell for fear of injury from the adjacent business plot; the business on the margin line cannot extend, although there might be vacant land on the adjacent residence area. The extension of garages into residence areas was a common problem. In New York, apart from

any local ground for objecting, this was usually allowed on the conditions (a) that no openings, windows, &c., shall be on the residence side; (b) that the building on that side shall be enclosed by a well-designed wall faced with an approved facing material to preserve the amenity. This was a case in which the right to refuse entitled the board to attach any reasonable conditions to its sanction. The plots adjacent to buildings already existing which have a non-conforming use, also raised many cases for exception. This was often dealt with by allowing a partial relaxation of the strict residence rules on the plots affected by a non-conforming use; giving sanction to something which was intermediate in character and not likely to be injurious to either side. In fact, grading off gradually from extreme residence character to extreme business or industrial.

One of the most interesting and important developments in regard to city planning in America was the attempt which has been made by Mr. Edward M. Bassett and others to draw up a form of "State Enabling Act" for the purpose of empowering local authorities to carry out the planning of unbuilt-on areas. Hitherto, although in the one State of Pennsylvania the law seemed to uphold the validity of a plan laying down streets, &c., ahead of development, there has elsewhere been great difficulty in laying down a plan for unbuilt-on areas; and any such plan laid down had been liable to be upset as imposing an unconstitutional limitation on the property rights of the owners. Profiting by the experience in regard to zoning Mr. Bassett had now proposed an Enabling Act to empower local authorities to establish the position of thoroughfares and parks; to give them control of what the Americans called "planning," which we should call "site planning"; to secure an adequate supply of small parks in connection with all such plans; to protect the lines of the streets from the erection of buildings; to give power to modify the zoning in connection with site plans; to provide for a certain amount of distribution of density so long as the average is maintained; and to provide also for appeal and revision by the courts of law.

Some discussion followed, and a hearty vote of thanks was passed to the delegates.

SURVEYORS' INSTITUTION

GLOUCESTER, SOMERSET AND NORTH WILTS BRANCH.

MR. A. C. WILLIAMS presided over the annual general meeting of the Gloucester, Somerset, and North Wilts branch of the Surveyors' Institution.

The elections for the ensuing year were as follows:—Chairman, Mr. H. B. Napier; vice-chairman, Capt. Yates. Executive Committee: Past Chairman, *ex-officio* Members for five years, H. Knowles (Gloucester), Theodore Sturge (Bristol), Capt. C. H. Smith (Chippenham), A. E. Petter (Bristol), A. C. Williams (Cirencester). Fellows: C. A. Bernard (Bristol), C. F. Dawson (Bristol), F. A. S. Goodbody (Bristol), H. O. Holbrow (Bristol), C. Moirer (Taunton), A. W. Wilkinson (Taunton), W. J. P. Taylor (Bristol), W. E. Underwood (Bath). Professional Associates: F. W. Davies (Thornbury), W. J. James (Bristol), A. E. Oaten (Bristol), Capt. John Poore (Badminton), Reginald Price (Bristol). Hon. Secretary, C. H. Pritchard. Representative of the Institution on the Court of the Bristol University, H. B. Napier.

Mr. R. K. Price, who has resigned the hon. secretaryship after holding the office for ten years, was presented with a silver inkstand as a token of the members' appreciation. The presentation was made by Mr. Napier.

Obituary.

The death has occurred at his residence, Coquet Villa, Heaton, Newcastle, of Mr. Chas. Kirk, aged fifty-nine years, a partner in the firm of Messrs. Kirk & Dickinson, slaters and slate merchants.

Bronze Tablet unveiled during the Railway Centenary Celebrations at Stockton-on-Tees.

Designed by Mr. STEPHEN WILKINSON, F.R.I.B.A., Architect to the L.N.E.R.

THE BUILDING TRADE.

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—XII

In our last article we were dealing with the forms of remedy for an infringement of the right to light, and it will have been seen that certain principles have been laid down on which the Courts will act in granting either damages or an injunction, and that damages may be given either with an injunction or in substitution for an injunction, and that now it has definitely been decided that damages may be awarded in *quia timet* actions. Before leaving the subject we may, however, point out that if a building when completed will cause such a degree of obstruction that the only effective remedy will be a mandatory injunction for the removal of a portion at least of the building, it is essential that the party aggrieved should act without delay. Any unreasonable delay will certainly be taken into consideration by the Court in deciding whether or not such an injunction should be granted.

Failing some agreement between the parties in such a case, possibly the safest course is at once to apply for an interim injunction. On such an application, it appears, several courses are open for the Court to adopt. Thus we have shown in our tenth article where the defendant has acted unreasonably even a mandatory injunction may be granted in the interlocutory proceedings (*Von Joel v. Hornsey*, 1895, 2 Ch. 774), or the Court may make a declaratory order with liberty to apply for an injunction as in the case *Litchfield-Speer v. Queen Anne's Gate Syndicate No. 2* (1919, 1 Cr. 407; *The Builder*, February 28, 1919). The decision in *Leeds Industrial Co-operative Society v. Slack* (1924, A.C. 851; *The Builder*, January 2, 1925) is too recent to enable it to be said whether the Court will ever give damages in respect of a threatened injury in interlocutory proceedings, but we should imagine it would only do so in very exceptional circumstances.

As regards offers made by the parties, we may refer to the comparatively recent case, *Vere v. Minter* (*Weekly Notes*, 1914, p. 89). In that case the plaintiffs were claiming an injunction against the defendants in respect of a building which was in course of erection and which would obscure their ancient lights. During the course of the trial the defendants offered to erect their building according to an altered plan which they alleged would prevent any real interference with the plaintiff's lights, and to give an undertaking to that effect, with an inquiry as to damages (if any) and to pay the plaintiff's costs, and they asked the Court on this footing to limit the injunction to building otherwise than in accordance with this altered plan. The plaintiffs did not consent, and the Court declined so to limit the form of the injunction, in the first place because if the altered plan would not involve a breach of the general injunction there would be no need for the limitation asked for; and secondly, because the Court would be deciding on inadequate evidence a question which could only be decided on a motion to commit for breach of the injunction. The injunction was, therefore, granted in the usual form.

Parties to Actions.

We have incidentally shown (see Article IV.) that lessees may maintain an action for the infringement of the right to light, and that they can acquire a right not only as against lessees from the same landlord but as against the landlord himself (*Morgan v. Fear*, 1907, A.C. 425). In *Simper v. Foley* (2 Johns & H. 555) it was held that a tenant from year to year could file a bill for an injunction to protect the right to the use and access of light, but the injunction would be limited to the period of the continuance of his tenancy; but

in *Jacomb v. Knight* (1863, 32 L.J., Ch. 601), where a tenant on a yearly tenancy complained of the obstruction caused by a building being erected by tenants of the same landlord and had received notice to quit from the landlord and had then filed a bill for an injunction, the Court, seeing that the interest of the tenant was small and the damage not serious, dismissed the bill for an injunction, but without prejudice to the plaintiffs taking action at law for damages. It will be remembered that at the time this action was brought the Courts of Equity and Common Law had separate jurisdiction, and even after the passing of Lord Cairns' Act and the subsequent fusion of the jurisdiction doubts existed until the decision of *Slack's* case in the House of Lords whether damages could be given in *quia timet* actions (see Article XI); thus in such cases where the interest in the property was small the Courts may well have hesitated to grant an injunction.

We venture to submit that the decision in *Leeds Industrial Co-operative Society v. Slack* (1924, A.C. 851) that damages can be awarded in respect of a threatened obstruction to light may have a very material bearing on the remedies that may be given where the interest of the person suing is slight—that is, where he is a lessee or tenant, or where the interest is, as it were, in suspense, that is in reversion. See, for instance, *Martin v. Price* (1894, 1 Ch. 276), where this question was raised.

The position of a reversioner is, however, somewhat different from that of a leaseholder or tenant, for the obstruction, whether temporary or not, may create an interruption and thus cause the easement to be lost. This aspect of the question was recognised in the Metropolitan Association for Improving the Dwellings of the Working Classes *v. Petch* (1858, 5 C.B.N.S. 504). In *Shadwell v. Hutchinson*, (1858, M. & M. 350) a reversioner bought an action in respect of a skylight erected over an area which obstructed an ancient light, and the defendant alleged that it was capable of being removed and the premises restored to their former state by a simple operation, but the Court, on the ground that the right might be lost, awarded nominal damages. The obstruction was not removed, and it was held in a subsequent action (1831, 2 B. & A., 97) that the continuance of the obstruction gave a fresh cause of action.

In passing, we may here note that in *Harris v. Kinloch* (1895, *Weekly Notes*, p. 60) it was held there was no difference in the easement of light between skylights and other windows.

Mr. Hudson, in his "Law of Light," states (at page 145) that an action will lie at the instance of the reversioner to a leasehold interest against a lessee who blocks up windows in the house possessed of rights to light, citing an old case, *Tomlinson v. Brown* (1755, Say 215), as an authority for this proposition. But where the property is leased the owner cannot prevent a neighbouring owner from acquiring an easement over the property thus leased unless his lessee will permit him to do so. This is expressed in the head-note to *Ladyman v. Grave* (1871, L.R. 6 Ch. 763), as follows:—"The owner in fee of land demised for a term of years is subject to any right to access and use of light over his land which may be acquired by the owner of an adjoining house during the demise," and this is supported by the fact, as we have shown in a previous article, that a tenant can give the consent or agreement mentioned in Section 3 of the Prescription Act, which will prevent a right to light being acquired (see *Hyman v. Van den Bergh*, 1908, 1 Ch. 167, *The Builder*).

This is the result of the prescriptive easement of light not having to be enjoyed as of right under the Act which distinguishes it from other easements or rights acquired otherwise than under the Statute.

Two considerations arise out of the above observations: first, that wherever such course is possible it is well to join all parties interested, both in occupation and in reversion, in any action respecting ancient lights; and secondly, that in leases where ancient lights may come in question a clause may with advantage be inserted preventing the lessees from blocking up the lights on the premises, and compelling the lessees, on terms, to be made parties to any action rendered necessary to prevent a right to light being acquired over the demised premises.

Hitherto we have only been considering the parties who can sue, but a word must be said as to the parties who can be sued. Primarily it may be said that as the obstruction of light is a tort, the person causing the obstruction will be liable for the wrongful act; thus if the servient tenement is in the occupation of the owner, he will be the person to be sued, while if a tenant is in occupation and causes an obstruction he will be the person liable.

A wrongful obstruction is, however, a continuing nuisance, and therefore where the obstruction has been caused before the tenancy began the lessor will be liable (*Rosewell v. Prior*, 1701, 12 Mod. 635), and therefore it appears that both parties would be liable to be sued, and that even if the property be sold with an existing obstruction which is illegal the vendor may still be sued (*Thompson v. Gibson*, 1841, 7 M. & W. 456), although the purchaser will still be liable if he permits the obstruction to continue, certainly after request has been made to him to remove it (*Penrude's case*, 1858, 5 Rep. 101a), or very possibly without such a request having been made (*Salmon v. Bensley*, 1825, Ry. & M. 189).

In *Born v. Turner* (1900, 2 Ch. 211) an action for an injunction was brought against an adjoining owner and his builder to restrain an interference with light and for trespass. The builder severed in his defence from his employer and appeared separately at the trial. An injunction was granted with costs as against the adjoining owner but it was held that the builder was entitled under the circumstances to a complete indemnity and to an order for payment of his solicitor and client costs from his employer.

Before leaving the subject of who may be sued, we may refer to the case *Jenks v. Viscount Clifden* (1897, 1 Ch. 694) as to the liability of executors and administrators when it was held that the continuance of an obstruction to ancient lights is an "injury committed" in respect of property within the meaning of 3 & 4 Will 4 C. 42, section 2, giving rise to a cause of action *de die in diem*, and therefore an action can be brought against executors or administrators for the same, although the obstructing building was erected and completed more than six months before the death of the person they represent who caused the obstruction to be erected, as it falls within the terms of the Statute which prescribes that the "injury shall have been committed within six calendar months before such person's death."

We have endeavoured in the foregoing articles to indicate some of the points arising in connection with the acquirement by prescription of the right to light and its enjoyment, and we have cited, where possible, some of the cases which relate to the points touched upon; but in our next article we propose giving a short notice of the cases not touched upon in our text which have been reported from about the year 1911, taking that date as what we believe to be about the date of the latest edition of any text book on Light, hoping that a brief digest of the latest decisions may be of service to our readers.

BUILDING CONTRACTS

By W. T. CRESWELL, Lic.R.I.B.A., Assoc. (late Fellow) of the Surveyors' Institution, F.R.San.Inst., Barrister-at-Law.

PRIVITY OF CONTRACT.

A SUB-CONTRACTOR is not a party to the contract between the employer and the contractor, and he cannot therefore bring an action against the employer upon it, there being no privity of contract between them.

There may, however, be communications or independent dealings between the sub-contractor and the employer, which may amount to an express or implied contract on the part of the employer to pay the sub-contractor. The burden of proof lies on the sub-contractor, who must show that the employer and not the general contractor was the real principal.

If the sub-contractor is personally ordered by the employer to do work the employer must pay him. See *Wallis v. Robinson* (1862, 3 F. & F. 307.) The employer can, however, call the general contractor to prove that on the accounts between him and the sub-contractor nothing is due to the latter. It is always open to the sub-contractor to show that the employer and not the principal contractor was the real principal, by producing evidence, that the employer personally gave orders to do work and supply materials for the same building to third parties as corroboration of his evidence that he himself was given orders to do work.

The fact that the sub-contractor employed by the general contractor confers a benefit upon the employer does not give rise to any privity of contract between the sub-contractor and the employer. If the article or work done by the sub-contractor is not affixed to the freehold he remains the owner of it until paid for it, and in the event of the general contractor becoming bankrupt he is entitled to claim it.

Some Cases Bearing on the Question.

In *Leslie & Co. v. Metropolitan Asylum District Managers* (1901, 68 J.P. 86), where the architect sent the general contractors for the work orders to give to the sub-contractors, and they gave them, and the sub-contractors delayed the work and caused the general contractors damage, it was held that the general contractors could not recover against the employer for delay.

In *Hobbs v. Turner* (1902, 18 T.L.R., 235), the contract provided that the provisional sums for goods to be ordered from special artists or tradesmen should, as the architect should certify, be payable by the builder or the building owner. The architect certified the sums as due from the defendant (the building owner), and it was held that the plaintiff was entitled to recover this sum direct from the building owner. This case was followed in *Young v. White* (1911, 28 T.L.R. 87), when specialists for the supply of steel work for a building were held entitled to sue the building owner as the real principal in respect of the goods supplied through the building contractor.

In *Crittall v. London County Council* (1911, 75 J.P. 203) sub-contractors were held to be entitled on the facts to sue the building owners as the real principals in respect of goods supplied through the general contractors.

In *Ramsden and Carr v. Chessum & Sons* (1913, 78 J.P. 49, H.L.) there was a contract in the R.I.B.A. form, which provided that "all specialist merchants, tradesmen or others executing any work or supplying any goods for which prime cost prices or provisional sums are included in the specification, who may at any time be nominated, selected or approved by the architect, are hereby declared to be sub-contractors employed by the contractor." Specialists were employed by the architect under p.c. items in the general contract to supply fittings. Before delivery of the fittings the general contractors were informed that the fittings were to be supplied by the specialists, and the general contractors used the fittings in carrying out their contract.

It was held that the delivery of the goods

and their use by the general contractor implied a contract on their part to pay for them.

In *Hampton v. Glamorgan County Council* (1915, 84 L.J., K.B. 1506 C.A.; affirmed 1916, 33 T.L.R. 58 H.L.) the respondents, a county council, made a contract with a builder whereby the latter undertook to build a school for a certain sum. The specification contained the following items: "Provide the sum of £450 for a low pressure heating apparatus," and "Allow the builder's profit on the above sum £5." The respondents' architects having asked the appellant to tender for providing the apparatus, he offered to do the work for £391, and they directed the builder to accept the tender. During the work the appellant received from the builder a payment on account, but before the appellant had completed his work the builder suspended payment. In an action by the appellant against the respondents to recover the balance of the agreed cost of the work of providing the heating apparatus it was held that the respondents were not liable, as neither the builder nor the respondents' architects had authority to pledge the respondents' credit, and that the builder had himself contracted with the respondents as to the heating and had merely employed the appellant as a sub-contractor, and was not the agent of the respondent to employ the appellant.

Young v. White and Crittall v. L.C.C. (ante) were disapproved. *Hobbs v. Turner* (ante) was distinguished for in the contract were express provisions by virtue of which the building owner became liable to the sub-contractors. *Leslie & Co. v. Metropolitan Asylums District Managers* and *Ramsden v. Chessum* (ante) were approved.

The case of *Hampton v. Glamorgan C.C.* (ante) established that there is no presumption in the case of prime cost or provisional items in a building contract, that the building owner is liable upon the contract under which the things in question are ultimately supplied. The fact that an item is a prime cost item, and that a sum is provisionally allowed for it in the contract does not show *prima facie* that the building owner is responsible for it; and there is no difference of principle as between a prime cost item and any other item in respect of which one person is to find and supply goods for the benefit of another which makes it any more or less likely that there is a contract between the person who supplies the goods and the person who ultimately enjoys the benefit of the goods.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—Ed.

Building with Flint.

SIR,—I should be much obliged if any of your readers could assist me with advice. I have a large quantity of large blue boulder flints at my disposal, and would like to use them, squared, for walling. I understand that 13 in. flint walls, solid, with a brick rubble core, would be impervious to moisture.

S. S. G.

Insect Nuisance.

SIR,—My house has been built for nearly two years, and since the recent hot weather I have noticed large numbers of tiny insects, which apparently come through the cracks of the wood-work, floors and window ledges. They are very small, some white and some brown, and when looked at through a magnifying glass very much resemble lice, but are much smaller. How may I get rid of them? Spraying the rooms out

thoroughly with Formalin has had no appreciable effect.

"ANXIOUS."

Underpinning Adjoining Premises.

SIR,—I am anxious to know the legal position with regard to the underpinning of adjoining premises as may be necessitated before the erection of a new building. Have I the right to underpin my neighbour's wall, or should permission be first obtained, and if this course is necessary, what is my position should that permission be refused? Have I to abandon or modify my building?

W. H. M.

[No one has the right to underpin his neighbour's wall for the purpose of placing thereunder foundations and footings prescribed by the by-laws in force in the locality, and so that the external wall of his new building is built to the extreme limits of his boundary. His neighbour has the natural right to have the soil of his land undisturbed by the operations of another from underneath or adjacent; and in all cases there is no natural right to the support of a building, but only just to so much support as would leave undisturbed the land, if there were no building upon it. Unless provision is made in the locality by statute on the subject matter of the query, as for instance in the Metropolis under the London Building Acts, the proper course for the enquirer to adopt is to endeavour to enter into an agreement, maybe on terms, with his neighbour. If unsuccessful, he need not abandon his project, but should get in touch with the local authority, who will probably make such concessions and arrangements as will result in enquirer being enabled to proceed with his scheme, and without modifying the building. Otherwise the projected building with its footings and foundations must be placed entirely on the land of the enquirer. Further, it may be stated, that if in excavating close to his boundary he shakes the foundations of his neighbour's wall so that it falls down, he is not liable for such injury in the absence of proof that either by prescription, or by reason of presumed grant, or implied reservation, he is under some duty to support the wall.]

Subsidy Houses.

[Re MR. REGINALD SLATER'S LETTER.]

SIR,—May I suggest another point of view to that expressed in the answer given in your issue for July 10. The Government, through the local authority, grants a subsidy to a piece of property, comprising a newly-built house and the land it stands upon, and certain restrictions are imposed, and generally an agreement made with builder or recipient of the subsidy, that no additions shall be made during a certain period—usually set at seven years. The building of a garage would constitute such an addition, and the local authority would seem to be within their powers in refusing their consent. Your correspondent would seem to have two alternative channels of redress: (1) Place all the facts before the local authority, showing that as purchaser he was not called upon to comply with the conditions under which the subsidy was granted, and suggest that consent to proceed with the building should be given. The local authority would then be able to sue the builder or former owner for the refunding of the subsidy amount forfeit by infringement of the conditions under which it was granted, the onus for binding the purchaser to respect the same being upon him—the vendor. Or (2) bring an action against the vendor for misrepresentation, in which case it would be a matter of damages that would be assessed upon the lowered value of the property as suffering under the building restrictions. The former would doubtless be the more satisfactory outcome, and one that should be quite possible in dealing with a fair-minded authority, but it is always necessary to first obtain the sanction of the authorities before building operations are commenced.

LEX.

NEW BUILDINGS IN LONDON.

Battersea.—A contract will be placed shortly for the erection of additions and alterations to the buildings at Walter St. John's School. Mr. A. H. Ryan Tenison, F.R.I.B.A., 21, Gt. Peter-street, S.W.1, architect.

Bermondsey.—New offices are to be erected in Lower-road, S.E., for the Board of Guardians. Messrs. Newman & Newman, 24, Railway-approach, London Bridge, S.E.1, architects.

Bond-street.—In connection with the "below ground" reconstruction of the Bond-street Station of the London Underground Railways, it is proposed to create a shopping arcade on the ground floor, lined with shops, and providing access to a booking hall below. The architect is Mr. Stanley A. Heap, of Electric Railway House, Broadway, S.W.1.

Camberwell Grove.—The L.C.C. has given a sum of £16,000 towards the cost of rebuilding a portion of the Mary Datchelor School for Girls. Mr. W. Curtis Green, A.R.A., 5, Pickering-place, S.W.1, architect.

Croydon.—Alterations and additions are to be made to the premises of Messrs. G. Goldsmith & Sons, Ltd., in Whitehorse-road, to the plans prepared by Mr. C. H. Ridge, Katherine-street, Croydon.

Denmark Hill.—The Salvation Army's proposed William Booth Memorial Buildings are estimated to cost £250,000. The architects are Messrs. Alexander Gordon, F.S.I., F.S.A., 97, Queen Victoria-street, E.C.4, and G. J. Morriss Viner, Lic.R.I.B.A., 11, New-court, Lincoln's Inn, W.C., with Sir Giles Gilbert Scott, R.A., 7, Gray's Inn-square, W.C., acting as consulting architect. The quantity surveyors are Messrs. Fleetwood, Eversden & King, 3, New-court, Lincoln's Inn, W.C.

East Ham.—A Memorial Hospital is to be erected from the designs of Messrs. Mennie & Smith, 11, New Court, Lincoln's Inn, W.C. Mr. J. Rockwood, 25, Bedford-row, W.C.1., quantity surveyor.

Edgware.—The Ministry of Health and the Hendon Board of Guardians are continuing negotiations with regard to the latter's proposal to build a hospital of 500 beds at Edgware at a cost of about £300,000. The first section, for which a provisional contract has been made, involves five wards holding 175 beds, nurses' home, laundry, power house, etc. The architects are Messrs. Payne & Hobday, 45, Bedford Row, W.C.1. The quantity surveyors are Messrs. John Leaning & Sons, 28, John-street, Bedford-row, W.C.1, and the consulting engineers are Messrs. Dolby & Williamson, 8, Princes-street, S.W.1.

Finsbury-square.—A large site in Finsbury-square, E.C.2, has been bought by the Maypole Dairy Co., Ltd., for the erection of a block of general offices. Plans have been prepared by Mr. W. A. Lewis, 11-12, Finsbury-square, E.C.2; quantities by Messrs. Gleed, Sons & Co., 8, Martin's-lane, E.C.4.

Hammersmith.—The large premises at Brook Green W.6, known as St. Mary's Training College, have been acquired by Messrs. J. Lyons & Co., Ltd., of Cadby Hall, W.14, who propose to adapt them for office purposes.

Hammersmith.—A large site in Askew-road, W.12, has been purchased by Messrs. Stansell & Gregory, Ltd., paper container manufacturers, for the building of a factory. Messrs. Wallis, Gilbert & Partners, 29, Roland Gardens, S.W.7, architects.

Hampstead.—The L.C.C. have agreed to contribute a further £14,000 towards the scheme for the extension of the Henrietta Barnett School at Central-square, at a cost of £30,000. The architect is Mr. John C. S. Soutar, "Wyldes," North End, N.W.

Harrow-on-the-Hill.—Plans for a new tower and additions to the St. John Baptist Church, prepared by Messrs. Alder & Turrill, 1, Arundel-street, W.C.2, have been approved. A contract for the building work has been placed

with Messrs. John Bentley & Sons, 42, Sun-street, Waltham Abbey.

Hendon.—Messrs. Haymills, Ltd., builders, Vivian-avenue, Hendon Central, N.W.4, propose to build 130 villas and dwellings.

Hornsey.—Hornsey Borough Council have approved the proposal to spend £40,000 on the erection of a new elementary school on the site in Rokesby-avenue, N. Mr. H. Carter Pegg, F.R.I.B.A., 35, Parliament-street, S.W.1, architect.

Ilford.—A new Wesleyan Methodist church is to be erected at the corner of Bennett's Castle-lane and Haydon-road, on the L.C.C.'s Becontree housing estate, at a cost of about £20,000. Messrs. H. Somerford & Son, Manor-street, Clapham, S.W., builders; Mr. George E. Withers, F.R.I.B.A., 50, Cannon-street, E.C.4, architect.

Kensington.—A new building is to be erected at the Queen's Club, West Kensington, W.14, to house two new covered courts. The contract has been placed with Messrs. Barrett & Power, 215, Upper Thames-street, E.C.4. Mr. P. M. Daveson, F.R.I.B.A., 34, Grosvenor-place, S.W.1, architect.

Kensington-North.—The proposed Princess Louise Kensington Hospital for Children is to be built at a cost of £80,000. The joint architects are Messrs. J. T. Saunders, F.R.I.B.A., 19, Linden Gardens, W.2, and George A. Lansdowne (Geo. A. Lansdowne & Brown), F.R.I.B.A., 9, Regent-street, W.1.

Lonsdale-road.—An addition is to be built at the works in Lonsdale-road, N.W.6, of the Kenbar Engineering Co., Ltd. Mr. Harold Shaw, 60, Nicoll-road, N.W.10, architect. Mr. G. Kentish, 91, Heath-street, N.W.3, builder.

Marylebone.—In connection with the blocks of tenement flats now being erected at Fisherton-street, W.2, it is proposed to build an additional story on each at a cost of about £10,000. The architects are Messrs. H. V. Ashley & Winton Newman, 14, Gray's Inn-square, W.C.1.

Merton.—The governors of the Nelson Hospital for Wimbledon and Merton, in Kingston-road, S.W.10, contemplate a scheme for extensions, including the provision of public and private wards, and clinics. Mr. J. Stuart Thompson, A.R.I.B.A., 49, Hill-road, Wimbledon, S.W., architect.

Mill Hill.—The Copt Hall estate, between Mill Hill and Hendon, N.W., is to be developed. The agents are Messrs. Daniel Smith, Oakley & Garrard, Winchester House, Old Broad-street, E.C.

Mortimer-street.—The Middlesex Hospital has now reached its £150,000 total, which is one quarter of the sum required to rebuild the hospital. The architect is Mr. A. W. Hall, of Messrs. Young & Hall, 17, Southampton-street, W.C.1.

Muswell Hill.—Muswell Hill Electric Theatre, N.10, is to be extended. Mr. E. G. Hastings, 18, Priory-grove, Hornsey, N., architect.

New Barnet.—The Willenhall Park estate is to be developed. The agents are Messrs. Daniel Smith, Oakley & Garrard, Winchester House, Old Broad-street, E.C.2.

Newington Causeway.—It is proposed to extend the outpatients' department of the South London Hospital for Women, at Newington Causeway, S.E., and a new building on a fresh site is projected. The hon. architect is Mr. M. E. Collins, 115, Old Broad-street, E.C.2.

Old Bond-street.—The contract for the new buildings to be erected at the junction of Old Bond-street and Burlington-gardens, W.1 in the Tudor style of architecture, for Messrs. J. B. Atkinson, Ltd., has been placed with Messrs. E. A. Roome & Co., Ltd., 7, Urswick-street, E. The architects are Messrs. Stanbrough & Harris, 29, St. James's-square, S.W.1.

Pall Mall.—New office premises are to be erected on the site of Nos. 87-88, Pall Mall, S.W.1. The builders are Messrs. F. G. Minter, Ltd., Ferry Works, Putney, S.W. Messrs. E. Howard & Partners, architects and surveyors, 15, King's-street, S.W.1.

Park-road.—The Anthroposophical Society propose to build a new hall in Park-road, N.W., adjoining the Institute. Messrs. Hoare & Wheeler, 22, Portman-street, W.1, architects.

Regent-street.—Further sections of the new Café Royal in Regent-street, W.1, are to be put in hand, and the rebuilding scheme will involve about £400,000. The general contractors for the first section are Messrs. Trollope & Colls, Ltd., 5, Colman-street, E.C.2. Messrs. Henry Tanner, 3, Hanover-square, W.1, architects.

St. Pancras.—Mr. George T. Coote, of 74, Milton-street, Fore-street, E.C.2, is building twelve lock-up garages and a large garage on the site, Wakefield-mews, St. Pancras, to plans prepared by himself.

West Ham.—Plans have been approved for extensive additions and alterations to the shop premises in Woodgrange-road, E.7, owned by Messrs. L. W. Spratt & Sons, drapers, Forest Gate, E.7. Mr. R. C. Turner Gordon, 304, Romford-road, West Ham, E., architect.

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

Local Building Committees.

Sir K. Wood informed Mr. T. Thomson that the Building Industry Committee had set up Local Committees in most of the building centres of the country, and arrangements had been made for further Committees to be set up as required. The Committee were not yet in a position to furnish statistics as to the number of apprentices which had been engaged, but no obstacles had been reported as regarded the working of the scheme in connection with local authorities' contracts for house building.

A Scottish Rent Bill.

Sir J. Gilmour, Secretary for Scotland, has presented a Bill to make further provision with regard to notice of intention to increase rent under the Rent and Mortgage Interest (Restrictions) Act, 1920 to 1925, in its application to Scotland; to provide for the use of rent-books in certain cases; and to remove doubts in regard to the provisions of the Acts with respect to restriction on the right of possession.

Town Planning in America.

Sir H. Brittain asked the Minister whether his department was following the efforts being made by the United States of America in the direction of town and regional planning; and whether any official reports upon American progress had been received.

Sir K. Wood said that the Minister's Department kept in close touch with these developments and frequent reports were received.

Housing Loans.

Mr. R. Morrison asked the Minister of Health whether he was aware of the handicap in obtaining housing accommodation placed upon many poor people with families because of their inability to put down any lump sum towards the purchase of a house and the disinclination of many landlords to let apartments to tenants with families; and would he consider meeting this difficulty by an amendment of the law that would permit local authorities to lend the whole of the purchase price of a house instead of 90 per cent. as at present?

Mr. N. Chamberlain said the question of the maximum amount of loan which local authorities should advance under the Housing Acts and the Small Dwellings Acquisition Act was fully discussed during the passing of the 1923 Housing Bill, and it was felt that the extension of the amount which could be advanced to 90 per cent. of the value was as far as it was possible prudently to go. One of the special conditions of the letting of houses erected by local authorities under the Housing Act of 1924 was that reasonable preference shall be given to large families.

THE RATING AND ASSESSMENT BILL

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

It is extremely difficult to give any connected account of the proceedings on the Rating and Assessment Bill in Committee; thus, in our last issue we were unable to say definitely what had been the decision of the Committee on Clause 16, sub-clause (3), which relates to the composition of assessment committees in County Boroughs. The proceedings subsequently, however, appear to have commenced with a sensational development, as it is reported that the Minister of Health announced that he would accept an amendment, the effect of which would be that Revenue Officers would have no further place in the Bill. In his statement the Minister is reported as having said that when he had the "draft Bill" under consideration he had expected many things from the inclusion of those commissioners, including economy, uniformity, and the general question of simplification, but representations had reached him since then from many quarters outside, which had shown that the provisions of the Bill relating to Revenue officers had raised a great amount of opposition which was very real and had caused a great and growing apprehension in the minds of many persons. After careful consideration and discussion with experts he had come to the conclusion that it would be necessary to approach the question of uniformity more slowly than he had hoped to do. He also stated that representatives of the Inland Revenue had never believed that the inclusion of Revenue Officers would result in increased revenue under Schedule A. This amendment being pressed to division, was carried by 43 to 8. The point involved in this concession is, are the Government still adhering to the resolution announced last week or two ago that they intend to stand by clause 19, sub-clause (3), which makes the gross value of any hereditament as appearing in the valuation list conclusive evidence of the annual value of that hereditament for the purposes of income tax? In the Memorandum which was issued with the "draft Bill" it was stated, "The provisions of Part II of the Bill are designed to secure that reasonable uniformity of principle and practice in which the present system is so notoriously deficient, but which is essential if the valuation is to serve the purposes above mentioned. The collaboration of the Revenue officers with the local rating authorities will help to promote such uniformity, and inasmuch as the gross values are to be used for purposes of Imperial taxation, it is, of course, necessary that officers representing the Crown should be concerned in the preparation and revision of the valuation lists." It is impossible with the information at present available to say what effect the above decision may have on the Bill; the principle of one valuation has many opponents, and it was made an integral portion of the Bill. If, as was stated by the Minister the other day, this Bill is intended as a first stage in the reform of the Poor Law, it may appear wise to drop it in its present form and bring in one measure dealing with both subjects. Clause 22 was the next mentioned in Committee, a clause not in the "draft Bill," containing "provisions as to the valuation of hereditaments containing machinery and plant." That clause in effect provides that with respect to any hereditament occupied for any trade or business or manufacture, other than any such hereditament the value of which is ascertained by reference to the accounts, receipts or profits of the undertaking carried on therein, all such machinery and plant as belongs to the classes specified in the Third Schedule to the Bill shall be deemed to be part of the hereditament for rating purposes, but subject as aforesaid no account shall be taken of the value of any plant or machinery in or on the hereditament. An amendment was moved to leave out the reference to Schedule III, to make all machinery rateable, but this was rejected. On clause 29 (clause 23 in the "draft Bill") Sir Kingsley Wood, undertook to bring in a fresh clause to provide for appeals being taken to a convenient and not expensive court, in place of quarter sessions as provided in clause 29, sub-clause (1) of the Bill.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

*JULY 24.—**Chorley**.—**SCHOOL**.—Erection of Highfield Council School, for the Borough Council. Biram & Fletcher, architects, 17, George-street, St. Helens.

JULY 27.—**Cerlisle**.—**PAINTING**.—External painting and certain other works of decoration internally at the Girls' High School, for the T.C. H. C. Marks, City Surveyor, 18, Fisher-street.

JULY 27.—**Carlow**.—**REPAIRS**.—To cottages in Carlow R.D. Scheme No. 206, in accordance with the plan and specification prepared by the Engineer, Irish Sailors' and Soldiers' Land Trust, 30, Lower Fitzwilliam-street, Dublin. Deposit £1 ls.

JULY 27.—**Cork**.—**REPAIRS**.—To cottages in Cork R.D. Scheme No. 7, in accordance with plan and specification prepared by the Engineer, Irish Sailors' and Soldiers' Land Trust, 30, Lower Fitzwilliam-street, Dublin. Deposit £1 ls.

***NO DATE.—Yorkshire.**—Clerk of Works required immediately for new buildings in extension of the Bridlington School, for the County Council. The Clerk of the Local Education Authority, County Hall, Beverley.

WORKMEN'S COMPENSATION

THE case, *Jones v. Tarr* (the *Times*, July 16), is the third case to reach the Court of Appeal in which a consideration of section 7 of the Workmen's Compensation Act, 1923, has arisen. This section provides that, for the purpose of the principal Act, an accident resulting in the death or serious and permanent disablement of a workman, shall be deemed to arise out of and in the course of his employment, notwithstanding that the workman at the time when the accident happened was acting in contravention of statutory or other regulations applicable to his employment, or of orders given by or on behalf of his employers, or without instructions from his employer, if such act was done for the purposes of and in connection with his employer's trade or business.

The applicant was the daughter of a man named Jones, who was employed by the respondent, the owner of one of several small and very shallow coal pits, to brick in the inset of a shaft. Jones had working with him a man named Smith and a lad named Gears, an adopted son of Jones. Jones found that he had omitted to bring with him a bricking hammer, a tool supplied by his employer, and he sent Smith and Gears to an adjoining pit, which was not owned by his employer, and which was a deep pit, to fetch a hammer belonging to his, Jones's brother, which he believed to be there. Smith lowered Gears into this pit, but whilst he was being hauled up he was overcome by fire-damp and fell out of the bucket. Smith went to Jones, who hurried to the pit and was lowered down it, but he was also overcome by fire-damp, and both lives were lost.

In these tragic and heroic circumstances, the County Court Judge had held that under

section 7 of the Act of 1923, Jones, in going to the rescue of Gears, was doing something for the purposes of and in connection with his employer's trade or business, and although it was outside the scope of his employment, the emergency brought the case within the Acts, and he awarded compensation to the applicant.

The Court of Appeal, whilst expressing their sympathy as being with the applicant, felt constrained to allow the appeal, and to set aside the award. The Court pointed out that this case did not raise any of the problems suggested by section 7. That section was passed to bring back within the ambit of the Act certain cases which had been held to fall outside the sphere of the workman's employment by reason of disobedience to statutory or other regulations, or the orders of the employer (*Davies v. Gwaun-caegurwen Colliery Company* (1924, 2 K.B. 651; *The Builder*, September 26, 1924), but it would be going far beyond any reported decision to hold that the section could be used to bring within the Acts an accident happening to a workman engaged in something quite outside the scope of the employment. The Court then cited the cases relating to the scope of employment, *Barnes v. Nunnery Colliery Co.* (1912, A.C. 44; *The Builder*, January 5, 1912; *Plumb v. Cobden Flour Mills*, 1914, A.C. 62), and applying the principles there laid down to the facts of this case, held that Jones, in sending Gears into the pit of another employer, had sent him there, not on his employer's business, but for his own purposes to borrow a hammer of Jones's brother, exercising his own authority over his adopted son right outside the sphere of the employment of both of them. The emergency had arisen also out of an act entirely foreign to the employment.

Section 110, subsection (2) of the Coal Mines Act, 1911, was cited to the Court, which provides that "Any workmen engaged in any rescue work or ambulance work at a mine shall, for the purposes of the Workman's Compensation Act, 1906, be deemed while so engaged to be employed by the owner of the mine," but this section was held to have no application, because the owner of the mine to which Jones went to the rescue of Gears was not the mine of the respondent, his employer, but of another owner, Harriman.

We have only drawn attention to the report of this case very briefly, but the Act of 1923, and in especial, section 7, have introduced such complications into the law relating to Workmen's Compensation that we propose in the near future publishing a series of articles dealing with the law as it now stands as amended by the new Act.

Insurance Against Bad (Export) Debts.

Mr. Arthur Michael Samuel, M.P., Parliamentary Secretary of the Department of Overseas Trade, has appointed a committee, under the Chairmanship of Colonel the Hon. Sidney Peel, to consider the question of insurance against bad debts in export trade. The committee comprises representatives of the banks, accepting houses, insurance companies, Lloyds, the Association of British Chambers of Commerce, the Federation of British Industries, together with the Comptroller-General of the Department of Overseas Trade. The Secretary is Mr. F. H. Nixon, of the Export Credits Department.

Wanted—A Paint Slogan.

The National Society for the Preservation of Property (by paint and varnish) announces a competition, open to the whole trade, to find a suitable slogan. Three prizes are offered 1st prize, 3 guineas; 2nd prize, 2 guineas; 3rd prize, 1 guinea. Selection will be in the hands of the organising manager and the advertising committee, and the results and names will appear in *The Builder*. Suggestions should be addressed to The Organising Manager, N.S.P.P., 25, Victoria-street, London, S.W.1. No contribution will be accepted later than first post on Monday, August 17. Envelopes should be marked "Slogan Competition."

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work, plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ATHY.—The U.D.C. are urging the rebuilding of the courthouse and barracks.

BARNET.—Mr. J. W. Fisher has prepared plans for the extension of the Barnet Girls' Grammar School, and the governors are to invite tenders for the work, which is estimated to cost £14,000.

BARNSELY.—The T.C. passed plans for the Trustees Ardsley Miners' Welfare Committee, shelters and conveniences to grounds off Barnsley-road, Stafrfoot. The Borough Engineer and Surveyor submitted a plan and estimate for the erection of a new public convenience at Monk Bretton Cemetery, and the Sanitary Committee recommended that the work be carried out at an estimated cost of £125.—The Town Clerk is to communicate with the M.H. on the question of a loan for alterations to the Corn Exchange.

BARTON-ON-HUMBER.—The Roman Catholic congregation are raising funds for the erection of a proposed new church.

BELFAST.—The E.C. propose to spend £29,000 on erecting a school in Crumlin-road, £27,000 on another in Mean Park, £18,000 in extension at Rosetta, and £500 in other extensions.

BERRY WOOD.—Northampton County Mental Hospital Committee have prepared a scheme for extensions to the hospital to provide additional accommodation for five hundred cases. An architect versed in institutional work has been employed to draw up sketch plans. The scheme is estimated to involve an outlay of £10,000.

BLACKHALL MILL.—Plans are being prepared by Mr. J. Eltringham, architect and surveyor, of Blackhall, for the erection of a new club and institute.

BLACKPOOL.—Messrs. Leach & Unsworth, builders, Seaberry-avenue, South Shore, have purchased land in Seaberry-avenue, where 37 houses are to be erected. **BOOTLE.**—Plans have been approved for the erection of a Roman Catholic elementary school at Stanley-ade, with accommodation for 300 children.

BOSTON.—The T.C. are to make application to the M.H. for sanction to borrow £5,000 for the erection of a pair of houses each in Fosdyke, Bell-lane, and Sham's Lands, North Fortyfoot Bank.

BOURNEMOUTH.—Messrs. Reynolds & Tomlins, architects, are to erect shops in Wimborne-road.—The Director of Education has reported as to sites for new schools.

BRADFORD.—The Corporation have arranged to erect 74 houses on land adjoining the Bradford Moor playing site. The City Architect is to proceed with the lay-out of housing sites at Eccleshill and Chellowange. It is proposed to secure 108 acres of the Eccleshill sewage land for housing purposes. The open cess system is to be introduced at the following rates:—Manningham, 4650; Bradford Moor, 4480; and Wibsey, 1160. The construction of a by-pass road at Wyke is recommended as a relief scheme, the cost being estimated at £56,000.—Plans passed: 24 houses, Jarwood-avenue, for Groves & Greenwood; 10 houses, High Park-drive, for H. Proctor; 12 houses, Leeds-ide, Eccleshill, for F. G. Burgess; 17 houses, Grenfell-ide, for J. H. Pitches & Son; 14 houses, Lodder-ide, for R. R. North & Co.; 14 houses, Wyke-crescent, for J. Sharp.

BRENTFORD.—The M.H. has agreed to the proposal of the U.D.C. to erect a maternity wing at the Cottage Hospital, at a cost of £2,160.

BRIGG.—The B.G. has decided to have plans prepared for a male vagrant ward to hold 40 beds and one for 20 beds.

BRISTOL.—The T.C. are to make application to the M.H. for the appropriation of land at Ham Green for the erection of eight non-parlour houses at an estimated cost of £4,176, and for authority to borrow the money.—The Housing Committee has arranged for the erection of demonstration steel houses of the Atholl, Weir, and Clifford type, at prices from £400 to £450, exclusive of foundations, &c.

BROMLEY.—The T.C. passed plans: Messrs. Dibben & Co., eight houses, Warren-avenue, and Bromley Mans, Ltd., 12 houses, Southlands-road.

BURNLEY.—The proposed new elementary school to be erected in Lionel-street, Burnley, will accommodate 60 children. The total estimated cost is £32,000.

CAMBRIDGE.—The "University Arms" Hotel at Cambridge is to be considerably enlarged according to plans, &c., prepared by Mr. George J. Skipper, R.E.B.A., of Norwich.

CARDIFF.—The Public Works Committee approved a plan for the first 500 houses of a scheme of 600 houses at Splott Park, submitted by Mr. Gordon Smith, architect, Whitechurch, on behalf of Messrs. Moss & Co.—The City Engineer has submitted 100 plans to the Plans Sub-Committee, which were approved.—The Corporation has granted applications for sites on the Ely estate for the erection of churches of the following denominations:—Church of Wales, Ward Movement, Congregationalists, Baptists, Roman Catholics, Plymouth Brethren, and Presbyterians.

CARLISLE.—The T.C. are shortly to invite tenders for widening of St. Nicholas Bridge.

CHESHAM.—Herts County Surveyor has been instructed to erect a small building at a cost of about £100 at the school for purposes of handicraft instruction.

LUTON.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

CHESHAM.—The R.D.C. has received sanction from M.H. to a loan of £50,000 for the purpose of erecting sites. The Ministry has also been asked to grant subsidies for the 108 houses proposed to be built.

COCKERTON.—A new Church of England elementary school is to be erected at an estimated cost of £3,300.

DARFIELD.—The Education Sub-Committee have recommended to the West Riding C.C. a site for a new infant school to accommodate some 300 children.

DARLINGTON.—On a recommendation of the Unemployment Sub-Committee the T.C. agreed that paddling pools and sandpits for children should be constructed as unemployment schemes in the Park and Cockerbeck Valley, together with similar facilities in North End Park, at a total estimated cost of £1,500. The Borough Surveyor was authorised to prepare the necessary plans and estimates.

DORCHESTER.—The Dorchester Swimming Club are to provide swimming baths and cubicles near Louds Mill at Greys Bridge. Plans have been provisionally approved for 104 parlour type houses on the Victoria Park site. Efforts are being made to obtain a site for the erection of non-parlour houses.

EAST HAM.—The Borough Engineer submitted a draft plan for the erection of a new swimming bath adjoining the existing baths, allowing for a 90 ft. pool. The B.C. recommended that the draft plan be approved, and that the Borough Engineer be directed to prepare plans and estimates.—The Engineer and Manager reported relative to certain structural repairs to the engine-room and boiler-house, to the generating station, and the B.C. recommend that the action be confirmed.—The M.H. has agreed to the Council continuing to issue certificates to cover 176 houses.

EASTLEIGH.—A new elementary school for 350 children is to be erected by the Hampshire E.C.

ETON.—At Eton College the conversion is proposed of the side of the new school yard fronting on to the Slough road into classrooms, at a cost of about £20,000. The architects are Forsyth & Maule, F.R.I.B.A., 12, Stratford-place, W.1.

FARNBOROUGH.—The M.H. has granted a loan of £3,050 for housing purposes.

GLAMORGAN.—The County Main Roads Committee has obtained the approval of the M.H. for a scheme, estimated to cost £100,000, of road and bridge improvement at Jersey Marine.

GLASGOW.—The architect has been empowered to arrange for various alterations at the municipal buildings. The City Engineer has been asked to prepare plans for additional accommodation at Belvidere Hospital for the indoor treatment of venereal diseases. Plans have now been prepared for new washhouses at Wolseley-street, Hutchesontown, and the Baths Committee recommend proceeding with the scheme, which is estimated to cost £30,000. Messrs. MacTaggart have a scheme for the erection of 130 houses at King's Park, Florida.

GOOLE.—The R.D.C. has received sanction from the M.H. for the building of 24 houses at Snaith and Cowick, at a cost of £670 each.

GOSPORT.—The Corporation are purchasing a site at Burt Arch for the erection of a convenience.

HADDON.—The Public Health and Housing Committee of the Derbyshire C.C. reported that the proposals for the erection of an isolation hospital by the Haddon Hospital Committee has now been approved by the M.H., subject to certain amendments, including the provision of an ambulance, which have added to the estimated cost. The amount already approved by the Council is £12,800, and the revised estimate is £13,440.

HANWELL.—The U.D.C. has now agreed to purchase the Hopefield estate for housing purposes.

HATFIELD.—The site for the proposed new elementary school, which will accommodate 600 children, is at the bottom of the railway bridge on the Hatfield side. A further batch of houses is to be erected by the Housing Association at the continuation of Broadway.

HAYWARDS HEATH.—A new Roman Catholic church is to be erected in the near future with seating accommodation for 300. The architect is J. H. Beart-Foss, 19, The Common, Ealing, W.5.

HEADLEY.—Hampshire E.C. propose an expenditure of £3,500 on the provision of two classrooms, manual instruction room, &c., at the Headley Bordon elementary school.

HEMSWORTH.—The National Housing Corporation of Great Britain, Ltd., in conjunction with the R.D.C. and local colliery companies, propose to erect 1,000 houses in eleven various districts within the R.D. Council's area. Mr. Douglas Wood is the architect for the scheme.

HERTFORD.—All Saints' Church of England school premises are to be transferred to the Herts E.C., who are to carry out repairs at a cost of £1,450.—Mr. J. W. Fisher, of Welborough, has been instructed by the Herts E.C. to prepare plans for a new elementary school for 300 boys.

HOLME CULTRAM.—The U.D.C. is seeking permission to borrow £7,000 for extensions at Silloth Gasworks.

IRTHLINGBOROUGH.—Detailed plans and estimates of the cost of constructing new bridges over the river and railway at Irlthlingborough have been submitted by the Northamptonshire C.C. to the M.T.

KESTEVEN.—The U.D.C. Standing Joint Sub-committee recommend the acquisition of Grey House, Stamford, as a suitable site for a new police station. The architect has been instructed to prepare a scheme for the adaptation of the premises.

KETTERING.—The U.D.C. has received sanction from the M.H. to borrow £5,000 to pay 50 subsidies.

KILKENNY.—The County Surveyor has been authorised by the C.C. to proceed with the reconstruction of the bridge at Callan. The C.C. has further under consideration the rebuilding of destroyed courthouses at Callan and Thomastown.

KIVETON PARK.—The Kiveton Park Coal Co., Ltd., have intimated to the R.D.C. that they are prepared to build 50 houses.

LEEDS.—The Corporation have approved of a proposal to purchase from Mr. Albert Braithwaite 32 acres on the Hollin Park estate, for £20,715, subject to Mr. Braithwaite undertaking to complete the erection of 361 type "B" houses, at £538 per house.—The Corporation have also agreed to the proposal to purchase 6½ acres on the East End Park estate, for £6,000, from the East End Park Estate Co., subject to the company undertaking to erect 78 type "A3" houses, at £535 each.

LISS.—Extensions and works are to be undertaken by the Hampshire E.C. at the elementary school, at a cost of about £1,000.

LIVERPOOL.—The Corporation passed plans: Five houses and shops, by R. Owens & Son, for Williams & Jones, in St. Mary's-road, corner of Ranfurly-road; twelve houses, by J. C. Martin, for the Brierley Building Co., in Honiton-road; jam factory, by Medcalf & Medcalf, for Belle Vale Orchards, in Wambo-lane; cinema, cafe, billiard hall, &c., by Gray & Evans, for F. Hiscocks, in Upper Parliament-street and Berkeley-street; nine houses, by R. Owens & Son, for Hugh Jones & Son, in Aigburth-road, between Stratford and Alresford-road; elementary school, by Smith & Sons, for the Corporation, in Whitehead-road; eight houses and four houses, by F. H. Peate, for Scarrett Bros. & Davies, in Warnerville-road and Talbotville-road; twelve houses, by F. E. G. Badger, for the Brook Building Co., in Mossley Hill-road; twelve houses, by R. Owens & Son, for Williams & Jones, in Kintore-road; store building, by G. Bradbury & Sons, for A. J. Buckingham, in Clifford-street.—The Housing Committee approved plans for blocks of working-class houses at the north and south ends of the city. The sites are a disused timber yard measuring about 3½ acres in Melrose-road, Kirkdale, and land in South Hill-road, Dingle, now occupied by old mansions and gardens, comprising about 2½ acres.

LONDON (BERMONDSEY).—Alterations are to be made at the central library, at a cost of £800.

LONDON (BETHNAL GREEN).—Plans have been prepared for a new elementary school for about 300 children in Bonner-street, for the Church of Our Lady of the Assumption.

LONDON (BRIXTON).—The L.C.C. have passed plans for a school for 600, to be erected in Sudbourne-road, the cost being estimated at £29,611.

LONDON (CLAPHAM).—Plans have been approved by the L.C.C. for remodelling and enlarging the Stonehouse-street elementary school, at a cost of £23,500.

LONDON (ELTHAM).—Additional school accommodation for about 300 children is to be provided by the L.C.C. on the housing estate.—The L.C.C. approved plans for 14 semi-detached houses in a new road between Well Hall-road and Archery-road, Eltham, by H. Bower; 10 terrace houses in Gerda-road, New Eltham, by Kenneth Dalgleish.

LONDON (FINCHLEY).—The L.C.C. has decided to erect a schoolkeeper's house at the Vernon-square school, at a cost of £952.

LONDON (HACKNEY).—The L.C.C. recommend that consent be given to the erection by the B.C. of a convenience at Victoria Park, near the junction of Grove-road and Lauriston-road.

LONDON (HAMMERSMITH).—The L.C.C. has authorised alterations at the Trade School for Girls, at a cost of £374.

LONDON (HAVERSTOCK HILL).—Revised plans have been prepared by the L.C.C. for a schoolkeeper's house at the school, at a cost of £934.

LONDON (HOLBORN).—The managers of the St. Andrew's Church of England school are to carry out structural alterations for converting the premises into a central school.

LONDON (HOXTON).—The L.C.C. recommend that the estimate of expenditure on capital account of £16,835, submitted by the Finance Committee in respect of the erection of an extension of Archer House and another block of dwellings on an adjoining site on the Whitmore estate, including all incidental expenses, be approved.

LONDON (KILNATON).—Plans have been approved by the L.C.C. for the enlargement of the Monton-street school, Islington, the cost being estimated at £11,600.

LONDON (LAMBETH).—The B.C. are to build 188 houses and 36 flats on the Bloomfield estate, at a cost of £161,000.—The L.C.C. recommend the borrowing by the B.C. of £160,862 for housing purposes.

LONDON (LEWISHAM).—The L.C.C. has approved plans for four detached and 10 semi-detached houses in Coniston-road, by W. Reynolds & Co.—The L.C.C. has arranged for the enlargement of the Elfrida and the Athelney-street schools.—The L.C.C. has acquired "Brent Knowl," Mayow-road, for conversion into an open-air school.

LONDON (MILE END).—The L.C.C. are acquiring a site in Cephas-street, for the erection of an elementary school.

LONDON (NORWOOD).—The L.C.C. has decided to erect a central school for about 400 children, on a site in Carnac-street.

LONDON (ST. MARYLEBONE).—A £250,000 scheme for extending the Regent-street Polytechnic has been prepared by the governors.—The L.C.C. have under consideration an application from the governors of Regent-street Polytechnic for a substantial building grant for the purpose of providing additional accommodation to take the place of that now provided in annexes to the main building, and to meet the need for additional accommodation.

LONDON (ST. PANCRAS).—The L.C.C. recommend that, subject to the expenditure on rate account ranking for B.E. grant of 50 per cent., the estimate of expenditure on capital account of £50,000, submitted by the Finance Committee in respect of a grant to the governors of the North Western Polytechnic towards the cost of erection and equipment of the Polytechnic, be approved.

LONDON (STREATHAM VALE).—The L.C.C. has decided to provide an elementary school for about 1,200 children.

LONDON (WEST HAM).—The T.C. has received provisional approval from the Board of Control to the Farm site at Ockendon for the erection of an institution for mental defectives.

LONDON (WHITECHAPEL).—The managers of the St. Patrick's Roman Catholic School, St. George's-in-the-East, have decided to enlarge the school by 80 places.

LOUTH.—The T.C. have accepted a tender for the erection of 10 houses at a cost of £4,992.

MANCHESTER.—The Post Office authorities are seeking a site in the neighbourhood off the Anson Estate, Rusholme, for a sub-office. Alterations and improvements are to be made to the General Post Office. The Housing Committee approved the lay-out of an estate at Moston for the erection of 600 houses and 40 shops.

MARGATE.—The M.H. has held an inquiry into the application of the Corporation for sanction to borrow £6,260 for the provision of slipper baths.

MARTLEY.—The R.D.C. has instructed the surveyor to prepare plans and invite tenders for the erection of houses on various sites.

MERTHYR TYDFIL.—The B.C. has received sanction to embark upon unemployment relief schemes, to the value of £118,530.

MIDDLESBROUGH.—The Corporation has secured a site in Parliament-road for the erection of additional swimming baths and the Borough Engineer has been instructed to prepare plans and estimates. The Corporation is also considering erecting swimming baths at North Ormesby.

NEWCASTLE-ON-TYNE.—Canon Newson reports that an anonymous donor of £5,000 has decided to bear the whole cost of the new buildings in connection with the cathedral, and these will be proceeded with as quickly as possible.

NORTHWICH.—At a meeting of the E.C. it was reported that the County Plans and Buildings Sub-committee had directed the architect to report on the purchase of a site in Spencer-street, Northwich, for the provision of a central school.

OTLEY.—The U.D.C. are borrowing £24,000 for the erection of 50 houses at Carr Green.

OXFORD.—The T.C. are to have plans prepared for the erection of a block of buildings at 60, St. Aldate's-street, for the School Management Sub-Committee, at an estimated cost of £8,300.

PAIGNTON.—Mr. H. Whitley is to erect 72 houses on fields off Dartmouth-road.

PORCHESTER.—Hampshire E.C. has decided to enlarge the Council school by 120 school places.

PORTSLADE-BY-SEA.—The U.D.C. are to make application for sanction to borrow £6,000 for housing purposes.

PORTSMOUTH.—The Corporation are to purchase four acres at Stanshaw, for the erection of 72 dwellings, at a cost of about £38,000. Plans passed: 24 houses, Randolph-road, for Mr. A. H. Chase; 16 houses, Mayles-road, for Mr. J. May.

RHILL.—The R.D.C. are about to commence upon a scheme for the erection of 50 houses.

ST. ALBANS.—Herts C.C. have prepared a scheme for the provision of an institution for 400 mentally defectives, on a site at Hill End, at a cost of £120,000.

SANDBACH.—The R.D.C. has received sanction for a loan of £8,150 for waterworks.

SARISBURY.—Hampshire C.C. has acquired property at Cold East, comprising a large country house and 173 acres, for the provision of accommodation for mental defectives.

SCARBOROUGH.—Sketch plans have been prepared for the Corporation, for the provision of medical baths. The B.G. have decided to purchase a site of approximately three-quarters of an acre in Stepley-road, for erecting a new children's home.

SEDGLEY.—The U.D.C. propose to establish a show-room for the Gas Department.

SEVENOAKS.—Plans for the development of the housing estate at Westerham to be prepared by Mr. P. T. Potter, architect, 49, London-road.

SHEFFIELD.—The Roman Catholic congregation are raising funds for the erection of a proposed new church at Eckington.

SOUTHPORT.—The T.C. are to erect public baths at Compton-road, Birkdale, estimated to cost £4,500; and also erect shops and offices in Eastbank-street, adjoining the Municipal Buildings, estimated to cost £21,600. The T.C. has adopted a resolution to erect 208 houses at Canning-road, Shafesbury-road, and Shafesbury-avenue.

STOCKBRIDGE.—The U.D.C. have decided to acquire the premises known as "Moorland Rest" as an isolation hospital. A site has been chosen for the erection of an elementary school. Hampshire E.C. are to enlarge the elementary school at a cost of £3,250.

STOCKTON.—The Corporation is to proceed with the demolition of Housewife-lane unhealthy area, and the rehousing of the residents in another part of the town. The estimated cost of the scheme is £111,500.

STRETFORD.—The local authority has secured a site for the erection of new Council offices. The site is at the corner of Warwick-road and Talbot-road.

STRIBTON.—The U.D.C. approved plans for 50 houses and 40 houses to be erected by private enterprise.

SWANSEA.—The Borough Estate Agent submitted a plan showing the lay-out of land at Townhill, east of May Hill, which the Housing Committee wish to appropriate for the erection of 250 houses, which the C.B. agreed to.

The Borough Architect submitted a plan of a new police station to be erected at Llansamlet, which the Council approved. The C.B. resolved that application be made to the Electricity Commissioners for their sanction to the borrowing of the sum of £50,000 in respect of prospective extensions to mains and prospective house services.

The Parks Superintendent stated that cost of fencing and laying-out of the Maesteg Recreation Ground would be approximately £2,439. This was agreed to. The Council approved the scheme submitted by the Borough Architect for the provision of further accommodation at the Town Clerk's Department at an estimated cost of £1,000. The Borough

Architect submitted plans for the provision of an orthopaedic clinic by altering and adding to the premises in Dynevor-place, the estimated cost of the work being £992. The C.B. resolved that the plans be forwarded to the B.E. for approval. The Council resolved that the Town Clerk make application to the M.H. for sanction to the borrowing of £21,000 for the erection of 35 houses on the Maryhill housing site. The C.B. has approved the following schemes as unemployed schemes:—Mayals-road, from Brinnau House to Clyne Common, road widening and diversion, £31,000; Walters-road, Llansamlet, from site of proposed school to north of Penllr-neaudd, road widening, £6,000; Cwm level road, Landore, from Neath-road to Colliery Incline Bridge near Pentre Pit, road widening, £8,000; Swansea-road, Waunarlwydd, from Victoria-road to Roseland-road, road widening and improvement, £4,000; new access road to Townhill from Carmarthen-road, extending from near Peter-terrace to junction of Penygraig-road and Townhill-road, £32,000; new access road to Townhill from Cockett-road extending from junction of Cockett-road and Glanmor-road to Townhill Farm, £11,000; and Cockett-road, from Glanmor-road to Hill House, road widening, £27,000. Plans passed: Warehouse, Northampton-place, for Evan Rees.

TAUNTON.—The T.C. are to make application to the M.H. for sanction to the borrowing of £17,748 for the erection of 40 houses on the Wellington-road site.

TAVISSTOCK.—The U.D.C. are to acquire 3½ acres for the erection of 32 houses.

THORNABY.—The T.C. has received permission from the M.T. to borrow £40,650 for the erection of 100 houses. The School Attendance Sub-Committee recommend the North Riding E.C. to approve the plans for the proposed new Council Central School, providing accommodation for 400, at an estimated cost of £15,000, be forwarded to the B.E. for formal approval.

TOWCESTER.—Mr. J. T. Blackwell, architect, has now prepared detailed plans for a new school for the Grammar School. The cost is estimated at £20,000, and accommodation will be provided for 200 pupils, which may be increased later to 250.

TREVEGAR.—The U.D.C. has applied for sanction to erect 100 municipal houses.

UPTON (W. YORKS.).—Plans have been prepared by Mr. Wormald, of the Architect's department of the West Riding C.C., for the erection of a proposed new Council elementary school. Accommodation is to be provided for 350 children, the site being on the Common-road site.

WALTON.—The T.C. have appointed a sub-committee to report on the advisability of providing a public mortuary.

WALTON-ON-THAMES.—The U.D.C. instructed the architect to prepare plans and specifications, and obtain tenders for the erection of 16 non-parlour houses to be erected in pairs on land fronting Rodney-road, and both sides of road No. 4.

WATF.—Funds are being raised by the congregation of the Parish Church for the erection of a new Sunday school.

WELLINGBOROUGH.—Northamptonshire E.C. are purchasing a site in Doddington-road for the erection of a secondary school. Additional accommodation is to be provided at the Technical Institute at a cost of £2,350.

WELWYN.—Welwyn Garden City Co. are to erect a bridge to carry a new road over the Luton branch of the L.N.E.R.

WEMBLEY.—The U.D.C. are considering plans for a new Town Hall.

WEXFORD.—The C.C. propose rebuilding Wexford Courthouse.

WHICKHAM.—The U.D.C. has decided to erect 47 houses.

WHITEFIELD.—The D.C. is preparing to erect a tram shelter at the tram terminus.

WITHNELL.—At a parish meeting the vicar, the Rev. R. A. Sganzy, outlined a scheme for the erection of a vicarage as a memorial to the late vicar.

WORCESTER.—The workhouse infirmary is to have a new separate building.

WOBSBOROUGH.—The M.H. has approved of the U.D.C.'s scheme to erect 80 houses at Bank End for subsidiary purposes. The U.D.C. are to erect a convenience by direct labour in Furnace-yard. Mr. T. Shield is the engineer.

A Housing and Town-Planning Tour.

The Garden Cities and Town Planning Association has made arrangements for a special housing and town-planning tour to take place towards the end of September. The tour will include visits to slum areas and slum clearance schemes, new housing estates being developed by the big corporations of the North and South, the industrial villages of Port Sunlight and New Earswick, the garden cities of Letchworth and Welwyn, and the town-planning schemes prepared and in course of execution by the Corporations of Manchester and Liverpool. Opportunities will be given in the course of the tour for the inspection of houses erected by various new methods of construction, including concrete and steel. The tour, which will be personally conducted, will begin on September 21 and end on September 30. Particulars of the tour, which can be taken wholly or in part, may be obtained from the Secretary, Garden Cities and Town Planning Association, 3, Gray's Inn-place, London, W.C.1.

TRADE ITEMS,

Jubilee of a Well-known Firm.

Messrs. Nicholls & Clarke, Ltd., the well-known firm of builders' merchants, of Shore-ditch, London, are this week celebrating the jubilee of their establishment. Mr. Nicholls Sen., who founded the firm in 1875, is happily still taking an active share in the management of the business, the record of which is one of steady and continuous expansion. We shall deal more fully with the firm's present-day activities in our next issue.

Waygood-Otis Sports.

The Waygood-Otis Club have recently held their sixteenth annual sports and garden party, on their ground at Bellingham. Although the weather was dull, the attendance was very good, a large number of the members and their friends being present to enjoy the admirable programme provided. Among the most interesting events decided were the 100 yds. flat handicap (won by Mr. G. R. Maryon in 10.2.5 secs.) and the veterans' and the ladies' 100 yds. (being won by Mr. F. Eldridge and Mr. L. Barton respectively). The half-mile and one mile cycle handicaps were won by Mr. Davies; and the 440 yds. club championship cup, which carries with it a gold medal, was won by Mr. S. Piper—for the fourth time in succession. The one mile flat handicap was won by Mr. R. H. Maryon; the 220 yds. handicap by Mr. S. Piper; the hurdle race by Mr. G. R. Maryon; and the departmental relay race (six teams competing) by the contracts department. The departmental tug-of-war challenge cup passed from the existing holders—the service department—to the transport department, after a splendid pull lasting 6½ minutes. A cup presented to the club by Mr. H. C. Walker (the chairman of the company), to be held for one year by the winner of the greatest number of individual events, was awarded to Mr. G. R. Maryon. The distribution of the prizes by Mrs. C. Clarke (wife of one of the managing directors) was preceded by a presentation to Mr. C. H. J. Day (starter) of a silver cigarette box by the members, in appreciation of the active interest he had always taken in the affairs of the club. Mr. George Martin made the presentation.

Pollard & Co.'s Annual General Meeting.

The thirtieth annual general meeting of Messrs. E. Pollard & Co., Ltd., was held recently, at the company's offices, 8 John's-square, London, E.C.1, when the dividends on preference shares and 10 per cent. dividend on ordinary shares were passed carrying a large balance to reserve. The retiring directors were re-elected. The board regretted the loss of an old colleague and director, Mr. I. Thomson, who died recently.

During his remarks, the Chairman (Mr. E. Pollard) stated that the new branches at Manchester and Dublin were creating a large volume of new business, and it was essential to hasten on the building of the new factory with all possible speed. With regard to the Sundries Company, he was pleased to say that several new processes of manufacture had been allowed the company to compete with great success in foreign markets, and representatives were well established in India and the Far East, Australia, New Zealand, Africa, Canada, and South America. An expression of satisfaction from the shareholders and a vote of thanks to the Chairman concluded the proceedings.

Building Stoppage Said to be Possible.

The building trade operatives are being asked to take a ballot vote on a provision arrangement which would enable them to enjoy the current rate of wages throughout the country for the next twelve months. The understanding is that they should agree to the sliding scale arrangement for adjustments according to the cost of living. It is believed, however, that the operatives are declining to accept these terms because of influences outside their own Federation. The agitation is against the wishes of the Federation.

TRADE NEWS

The Committee of the London Stock Exchange have now granted permission for the shares of Ewart & Son, Ltd., to be dealt in on the London Stock Exchange.

Mr. S. J. Pearson, publicity manager, William Shepherd & Sons, Ltd., road contractors, Milkstone, Rochdale, was amongst the speakers at the first British Advertising Convention, held recently at Harrogate, under the auspices of the Associated Advertising Clubs of the World (District 14). "Selling Constructional Materials" was the subject of Mr. Pearson's address.

Tangyes, Ltd.

Messrs. Tangyes, Ltd., of Birmingham, have issued a series of blotters illustrating some of their various manufactures. The firm, it may be noted, is exhibiting a number of specialties at the Royal Agricultural Show, Chester, at the Colliery and Mining Exhibition, Manchester, and at the Highland Show, Glasgow.

Monomarks.

A company has been formed with influential backing (Sir Sydney Skinner, chairman) to promote the Monomark System, which has been devised by Mr. William Morris, Chairman and Managing Director of Messrs. Wm. Morris & Co. (Westminster), Ltd. A Monomark is claimed to be the shortest officially recognised name and address in the world, and everyone can have one for 5s. a year. It is a symbol of from three to five characters, each one being absolutely unduplicated throughout the world. 25,000,000 different ones are available for Great Britain alone. They are easily written, telephoned or cabled. The following are typical Monomarks:—BM/EVO, BM/ADTA, BM/K2FXY.

Let us assume that a Monomark is applied for and the applicant is allotted BM/XOXI. Letters posted in any part of the world addressed to Monomark, "BM/XOXI, London," will reach unfailingly and without delay in whatever part of the country the owner of the mark lives. (The word "London" is added only to assist the Post Office.)

Arrangements have been made with the

G.P.O. whereby all letters received by them, from whatever part of the world, which are addressed by means of a British Monomark, shall be immediately handed over to British Monomarks, Ltd. At Monomark House these letters are not opened, but enclosed in new envelopes, re-addressed to the owner of the Monomark, re-stamped, and immediately returned to the Post Office for prompt dispatch.

All the uses of a Monomark have not yet been discovered, but some of them relate to lost property, stolen property, stolen motor-cars, laundry marks, cleaned and dyed articles, lost children, permanent address, telegraphic address, substitute for a box number, proving identity, concealing identity, and banking advantages. The present address of British Monomarks, Ltd., is 19, Abingdon-street, Westminster.

New Machines.

We have received from Messrs. A. Ransome & Co., Ltd., sawmill engineers and ironfounders, of Newark-on-Trent, copies of leaflets illustrating and describing two new machines of the latest and most up-to-date types, namely, the "plain band saw" and the "over and under planer." The plain band saw has the following special features:—(1) Both saw pulleys run on a combination of ball and roller bearings. (2) The top saw pulley is carried between two bearings and sustained on knife edges to form a very sensitive straining device, and further, the correct strain for any width of saw blade is clearly indicated on a graduated brass scale. This feature minimises broken saw blades, even if the saws used are of the narrowest widths. (3) The pressed steel disc saw pulleys cause practically no draught, thus increasing the comfort of the operator. (4) The table can be canted to any angle up to 45 degrees and locked securely by a lever and brought perfectly level again without the use of any tools. (5) The wide base enables the machine to be bolted down to an ordinary strengthened floor with the minimum of expense. (6) The machine is self-contained and can be driven from almost any direction.

The over and under planer has the following special features:—(1) All the four feed rollers are power driven. (2) The cutterblock runs in a combination of ball and roller bearings. (3) The heavy deep baseplate casting renders expensive foundations unnecessary, and keeps the machine rigid, reduces vibration, and enables better work to be done. (4) The power feed, or under, table is instantly clamped in position for any depth from 1-16th in. to 9 in. thick timbers, and is self-adjusting for taking up wear. (5) All gearing is totally enclosed and lubricated, and the feed is controlled by a single lever. (6) The fence is of specially rigid construction and needs no spanners to operate it. It can be moved across the full width of the machine, and is always square. It also cants to 45 degrees.

NEW BUILDINGS IN SCOTLAND

Salteoats.—SCHOOL.—The Dean of Guild Court has passed plans by the Ayrshire E.C. for the erection of a school for educating physically and mentally defective children. The new school will adjoin the Public School and will contain accommodation for 60 pupils, staff rooms, kitchen, and clinic for dental and ophthalmic work. The estimated cost of the building is £4,000.

Lennoxtown.—HOUSES.—After considering the report submitted in connection with the housing conditions in Lennoxtown, the Western D.C. of Stirlingshire agreed to erect 14 houses of the Weir type at Milton.

Roads "Up."

In response, doubtless, to the public outcry on the subject of the numerous roads and streets in London which are "up" and therefore closed or partially closed to traffic, the Ministry of Transport has issued a statement showing the streets in Central London on which works of road maintenance and improvement are either in progress or are to be commenced.

TENDERS

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

* Denotes accepted. † Denotes provisionally accepted. ‡ Denotes recommended for acceptance. § Denotes accepted subject to modifications.

Building Surveyors' Association.

The fourth annual general meeting of the above Association was held at the Town Hall, Stoke-on-Trent, on Saturday, July 4. The routine business included a report on the applications of six new members, who were recommended for approval, this bringing the total number of new members for the past year to twenty-four. The subject of certificates was discussed at length, and it was ultimately decided to appoint a sub-committee to draw up a certificate and seal and report to the next Executive meeting. It was arranged that the quarterly general meetings for the ensuing year be held at Leeds, Manchester and Liverpool in October, December and January respectively. Papers will be read at these meetings on some typical subject of interest to building

JULY 31, 1925

BY-LAWS AND STEEL FRAME BUILDINGS.

THE subject of building by-laws and regulations has become in recent years one of considerable complexity, and this, combined with the fact that it is not very interesting, tends to make us restrict our study of it to those details with which we have to deal in our everyday work. It is, however, a subject of very great importance and may do a great deal to assist or retard the art and industry of building, and it is well periodically to study the trend of its movement and to ask ourselves if all is well.

In the first place we must realise that building by-laws and regulations have their justification in the general well-being of the people; in the public interest it is essential to lay down certain laws governing the erection of buildings to ensure that the safety and health of the citizens shall not be prejudiced, and in this country we have an instinctive respect for law and order which makes us recognise the need for means for safeguarding the public in respect of buildings. There are, however, certain tendencies against which we must ever be fighting if we are to prevent official regulations from adding unduly to the cost of buildings and hindering progress in improved methods of construction; these tendencies arise undoubtedly from the zeal of the officials concerned and seem to be inseparable from all official systems. It is very easy to criticise official bodies, but before such criticism is of any real value it must be absolutely impersonal and must take into account certain inherent difficulties under which officials have to work. In the first place official action must be absolutely impartial, and we are very proud of the fact that in this country an extremely high standard is maintained in this respect; in the second place we must remember that the action of any particular official is usually governed not by his views on the matter, but on the instructions which he receives from his superior authorities. Sometimes these instructions are based upon Acts of Parliament or upon decisions of the High Court and cannot be altered without further legislation, and in other cases they are based upon a meticulous regard for past practices which modern advances have rendered obsolescent. In the third place, we must recognise the fact that there is a considerable body of people who endeavour to evade regulations which they must, in their better moments, recognise as desirable, and therefore the officials tend to make the regulations more stringent than necessary in order to have something in reserve and to regard everybody as having evasive propensities.

The regulations governing the erection of buildings in London are based upon a whole succession of Acts of Parliament, some of which seem to contradict each other, and which appear to have become successively more stringent. As more modern methods of construction have established their position in the industry new Acts or regulations authorised by Acts have been introduced, and these Acts and regulations have added to the difficulties of architects and engineers, as well as of the district surveyors, by the amount of detail calculations and drawings which must be submitted, and by the amount of detail inspection which the surveyors are called upon to give.

In articles which have appeared recently in our columns we have dealt in some detail with some of the drawbacks of the steel frame Act—drawbacks which have often resulted in a steel frame building costing more than one with the thick brick walls of the 1894 Act. There are even greater objections in the L.C.C. Reinforced Concrete Regulations, the 188 clauses of which have added greatly to the difficulty of erecting reinforced concrete buildings in London. In many of the more recent Building Acts provision has been made for giving elasticity to the regulations by the insertion of "waiver" clauses by means of which the Council may waive any particular clause which may present difficulty in special cases, and there appears to be a tendency to extend this procedure in order to provide for methods of construction not contemplated at the time that the regulations were made.

There are, however, serious objections to this procedure which many architects and engineers do not appear fully to have realised. In the first place, the waiver is usually granted upon conditions which the Council may deem fit to impose, and sometimes these conditions involve an increase in cost of the building which the client did not foresee when he gave instructions for application for waiver to be made. Apparently immediately one makes application for a concession, one is likely to set going an avalanche of requirements and various departments take the opportunity of safeguarding the public to an extent which is denied them in an ordinary building; the Fire Brigade is very zealous in this respect. We have known of cases in which several thousand pounds additional expense—in the opinion of the architect responsible for the work quite needless expense—have been involved in a building as conditional upon concessions granted by the London County Council.

In the same way that doctors who specialise in certain diseases forget that most people never get them, so fire officials appear to imagine a devastating fire to be likely in every building. In defence of the Fire Brigade it is sometimes urged that Insurance Offices often are stringent in their specifications; but the position is quite different in the two cases. An insurance company is a private firm, and in return for a consideration it is entitled to make any stipulations which its clients are willing to accept, but nobody need go to any particular insurance company unless he likes, and the position is merely one of a commercial bargain—incidentally, we have heard of a fire insurance company which is installing in its own building a floor which does not conform to its specification for fireproof floors.

The second serious objection to the waiver procedure is that it involves a great deal of additional trouble and expense in the preparation of special plans and involves delay in the progress of the building; the official machinery takes a long time to operate. A great improvement in this respect would be effected if the Council would publish precedents of concessions under the waiver clause. If, for instance, on application to the Council, one may obtain permission to stress filler joists up to 9 tons per sq. in., this should be published as an official decision, so that one could refer the district surveyor to this decision for future cases, and thus need not apply to the Council at all.

This procedure would obviate the objections which we have against the present form of waiver practice and would provide a ready means of enabling construction to keep pace with advances in scientific knowledge and in improved materials. Recently, for instance, two new forms of cement have been introduced—one known as aluminous cement and the other as rapid hardening Portland cement—but at present it is doubtful whether they may be used in a reinforced concrete building, even if their additional strength be neglected in the design; and unless the whole method of procedure under the London Building Acts is radically altered it must be years before rules governing their use can be laid down. If the London County Council could issue a decision allowing their use under specified conditions—not, we hope, too severe—then engineers and architects could refer to that decision by number in submitting their plans to the District Surveyor, and thus much additional labour and delay would be saved. Periodically—we suggest every five years—these decisions could be collated and incorporated in Rules under the London Building Acts.

In all matters of social legislation and reform the cost of any improvement should be scrutinised very carefully before it is made compulsory; in recent years we have allowed reformers to pass legislation which the country literally cannot afford to carry out, however desirable the reform may appear. In the building industry many causes have led to a great increase in cost, and, therefore, every possible encouragement should be given by official authorities to cheapen methods of construction, and they should take great care that they do not take back with one hand what they have given with the other.

NOTES.

**The
Minister of
Education
at the A.A.**

THE A.A. prize-giving is always an interesting function, but on Friday last it became an unusually important event since the prizes were distributed by the Minister of Education, Lord Eustace Percy. The Board of Education is the Government Department that can do more than any other to foster the arts, for whereas the Ministry of Health and the Office of Works can set an example by encouraging and building good architecture, the Board of Education alone can touch the mainspring—the education of the masses. It was the more gratifying to hear that the Minister realises the demand for more light that is gradually becoming insistent, and that the whole question of art training is to be seriously taken in hand. Architecture suffers from the terrifying characteristic that bad work remains constantly with us, spoiling our towns and ruining our countryside, and for this reason we hope that the Minister of Education will give his serious attention to the two vital needs of architecture to-day—the adequate training of the professional, and (which is even more urgently needed) the training, in understanding and appreciation, of the ordinary citizen.

**The A.A.
School
Work.**

It is not easy to estimate fairly the results of such teaching as is carried on at the A.A. Schools by the annual exhibitions of students' work. If, for instance, the admirable studies of Corinthian capitals which are now on view could always be conjured into

existence in the first term without some very pronounced talent and efficiency beforehand, we should consider it a high testimony to the school's guidance and help, for two or three of these studies could hardly be surpassed for accuracy and feeling. But even if one feels there must be some reservation to the credit of previous knowledge or training, we cannot doubt the efficiency of a school which can show so much creditable work for a first year. We generally find that the second year's productions indicate the most pronounced successes in relation to the time-table, and this year is no exception to the rule. Is it that the added dignity of the third-year student chastens and modifies his enthusiasm and makes him more sensitive to criticism? There is a lot of quite beautiful drawing and highly creditable design in the second-year room which does not leave the third-year work on a very exalted pedestal above it. Even a first- or second-year student could hardly succumb more completely to the influence of the jazz design and music of the day than some of the third-year students have done.

**The Higher
Education
in
Arch'tecture.**

WE are still looking for more designs which show an instinct for really fine proportions and distinction of emphasis and a little more real evidence of pleasure in our art. When we were listening to the statements of the A.A. President at the prize-giving function as to the numerical success of the school, we were already anticipating something of the ideals which might be kept in view for us all, and found some expression of them in the very welcome

remarks of Mr. Maurice Webb, who let it be plainly felt that we have still much to do before our educational efforts will satisfy the full needs of modern architecture.

**Zeal for
Knowledge.**

THAT the functions of the architect and builder are of some little use when one wants to build is borne in upon us by the series of questions propounded to us in a letter from a correspondent who would build a bungalow. Our advice is sought as to how to dig and lay out the foundations—how much concrete would be required—whether clinkers would keep down the cost—how to proceed in laying of drains—what is the necessary procedure in regard to the erection of bungalows—advice wanted as to central heating and fireplaces. As against all this lack of knowledge our correspondent claims that he could fix the guttering! After this we are inclined to believe he sees some definite means of paying for everything else. In some sense this naïve request for a great deal of useful information is amusing, but we should like to see a little more general readiness to spend a few pounds on the advice of young architects, or the decent profit which a builder might exact for providing a great deal of useful, practical information in carrying out a job.

**The
Picturesque
in Building.**

ONLY the other day we were impressed by the advantage from an architectural point of view of simplicity of treatment in housing schemes, for the long lines of unbroken roofs have a restfulness and breadth which gives added value to the economy with which

Entrance Gates to a Botanical Garden. By MR. DYCE SAUNDERS (Architectural Association School of Architecture).

Church of the Twelve Apostles, Salonica.
From an Etching by MR. E. PRENTICE MAWSON.

such design is carried out. The little group of Durham cottages, sketched by Professor Richardson (last week's *Builder*), shows what excellent emphasis is given by the little break of gables at each end of the frontage. But in too many of our modern housing schemes an attempt at variety and picturesqueness often spoils the whole picture. A correspondent has, however, fallen foul of monotony, and quotes a paper which decries, "the mere boxes of brick which add nothing to the amenities of either town or countryside." We see here the craving for a picturesqueness which is only tolerable when kept in check by a wise designer. The picturesqueness which is obtained by well-placed chimneys of suitable height and bulk and position, by well-placed dormers and gables, by pleasing juxtaposition of buildings, by the emphasis of features which are a natural and easy outcome of plan—this is a picturesqueness which we may always welcome, but the picturesque which results from an illicit connection between uselessness and extra cost is a sort one should learn to do without.

Lord Curzon's Will.

LORD CURZON'S will, under which the public will gain in many directions, is remarkable in that among the bequests he has left Tattershall Hall, Lincolnshire, and Bodiam Castle, Sussex, to the National Trust, with ample provision for their maintenance. One is irresistibly reminded of the will of Æsop as described by Shakespeare: Moreover, he hath left you all his walks, his private arbours and new-

planted orchards, on this side Tiber: he hath left them you, and to your heirs for ever: common pleasures, to walk abroad and recreate yourselves. Here was a Cæsar! When comes such another?" Lord Curzon's will is the best reminder of the great mind and warm idealism of a remarkable man, an idealism that was often obscured in the public mind by the coldly ceremonious front that he appeared to present to those who did not know him.

The Southern Railway.

ON the first day of electrification on this line there were two stoppages in the Penge tunnel—one of them lasting for the best part of an hour. Passengers must have suffered acutely in the appalling atmosphere of London's worst anachronism. Surely no other country in the world could have arrived at the year 1925 and still see steam trains running close upon each other's heels through an unventilated tunnel over a mile long within a few minutes of the city. This tunnel is a disgrace and one is more than ever ashamed of it, seeing that it is on the Continental line from Dover to London. The complete electrification of the Penge tunnel is an urgent necessity.

Town Planning Schemes.

THE official figures issued by the Ministry of Health are of considerable interest as showing the progress that is being made in town-planning schemes. An analysis of the figures shows that out of a total of 355 areas that come under local authorities who

are under statutory obligations to prepare schemes, 144 up to March 31 last had taken no effective steps; 160 had passed a resolution deciding to prepare a scheme or had been authorised by the Minister to prepare it; 39 had had a preliminary statement of proposals approved; while only twelve areas had passed the final stage and had schemes in operation. These figures are perhaps disappointing at first sight, but it must be remembered that town-planning cannot be carried out in a hurry, and the transition from the first to the later stages is bound to be slow, but at the same time there can be no valid excuse for a neglect to pass the primary resolution.

Alleged Overcrowding of the Architectural Profession. THE Report which we give on p. 177 of the findings of the joint Committee of three representatives of the R.I.B.A. and three of the Association of Architects, Surveyors, and Technical Assistants, on the question of the alleged overcrowding of the architectural profession, contains some interesting information on the numbers engaged in the pursuit of architecture, but very little that will cause surprise to those who have given careful consideration to the matter. On figures which are incapable of absolute proof, but which are, no doubt, substantially correct, the Joint Committee believe that at least as many men are entering the profession as can at the present time be absorbed, and are of opinion that steps should be taken not to limit the numbers entering the profession, but to warn the profession and the public of the fact, and "to ensure that the training given to students wishing to become architects is thoroughly adequate." With this last observation we heartily concur, as we do with the belief of the Committee that there is no overcrowding so far as the highly-trained, competent man is concerned, which carries with it the belief that "there is a surplus of indifferently-trained persons." There is really nothing in the Report which will cause any surprise to those who have studied the subject, but it is well to place the ascertained facts on record, especially that "the recognised Architectural Schools are in no way contributing to the overcrowding of the profession."

It is certainly an encouraging sign that the London Waterloo Bridge. County Council are so far really alive to the value of

Waterloo Bridge that they intend to secure the advice of an eminent architect as to its possible treatment for traffic. What we probably need now is the advice of an enlightened traffic expert who would agree to put before the eminent architect a possible solution and who would not insist on a council of perfection. What will occur to many will be whether the eminent architect, in order to solve a very difficult problem of providing four carriage and two footways, will suggest over-hanging footways!

GENERAL NEWS

Grant to School of Architecture.

Bristol Education Committee has decided to recommend that a grant of £200 be made to the Royal West of England Academy School of Architecture for the current year.

Improvements at Croydon Aerodrome.

Work has now been commenced on the scheme to make the London Terminal Aerodrome at Croydon "the finest commercial aeroplane station in the world." The cost is estimated at £225,000.

New School for Bush Hill Park, Edmonton.

Plans for a new elementary school at Bush Hill Park, by Messrs. Talbot Brown & Fisher, architects, of Wellingborough, have been accepted by the Edmonton Education Committee.

New Housing Order.

The Ministry of Health has issued a Housing Act (Form or Orders and Notices) Order, 1925, which has been made by the Minister, prescribing forms of certain notices and other documents. The order, which comes into operation on September 1, 1925, can be obtained of H.M. Stationery Office, price 7d.

Housing Progress in Scotland.

The following figures show the progress that has been made in State-aided housing schemes in Scotland to June 30, 1925:—

	Completed.	Under Construction.
1919 Act	24,672	824
Private Subsidy Schemes	2,324	—
Slum Clearance Schemes	1,502	2,627
1923 Act	3,047	6,440
1924 Act	157	1,493
	31,702	11,384

Of the total number of houses completed and under construction under the 1923 Act, 2,951 are by the local authorities, and 6,536 by private enterprise.

The Fitzwilliam Museum.

Out of the £100,000 required for the desired extensions to the Fitzwilliam Museum, Cambridge, £55,000 has already been subscribed. The architects of the new extension are Messrs. Smith & Brewer.

Irish War Memorial.

Merrion-square, Dublin, will shortly be acquired by the Irish National War Memorial Committee for the purpose of establishing the square as an Irish war memorial. It is proposed to erect at the four corners wrought-iron entrance gates and to lay it out as a public park. The cost will be about £40,000, which sum is already available.

Flats and the Ministry of Health.

The attitude of the Ministry of Health in refusing sanction to schemes for building flats in London is being severely criticised in many quarters. A correspondent writes: "I hear that a scheme approved by the Westminster City Council for erecting six-storied flats designed by Mr. H. V. Ashley has been turned down by the Ministry's architects on the grounds that it will mean undue congestion. A few weeks ago permission was refused to Hampstead to proceed with a scheme for building four-storied flats, planned by Major Douglas Wood, a former Housing Commissioner, unless one story was removed, but under pressure the Ministry has given way."

Crumbling Parliament Buildings.

That the Office of Works takes a serious view of the crumbling away of the stonework of the Houses of Parliament is evident from the posting by the First Commissioner of a notice on the Terrace warning members to keep away from the walls of the building. It is the view of the authorities that as much as £1,000,000 may be required for the complete restoration of the structure.

Proposed Memorial Chapel, Westminster Abbey.

In memory of all those, known and unknown, who gave their lives in the Great War, the Dean and Chapter of Westminster have decided to convert the enclosure at the south-west corner

of the Nave into a chapel, to be known as the Chapel of the Holy Cross. In this chapel will be placed a tablet or brass inscribed with the names of the old choristers and other members of the Abbey staff who fell in the war. A provisional design for its furnishing has been prepared by Mr. J. N. Comper.

COMPETITION NEWS

*Coventry and Warwickshire Hospital: Proposed New Ward Block.

Members of the R.I.B.A. must not take part in the above competition because the conditions are not in accordance with the published Regulations of the Royal Institute for architectural competitions.

Reconstruction of the Mosque of Amrou, Cairo.

An international competition for designs for the reconstruction of the Mosque of Amrou, Cairo, has been instituted by the Comité de Conservation des Monuments de l'Art Arabe. Designs will be judged about January, 1927. The premiums offered are: First, £E.2,500; second, 1,000; and third, 500. A document in French, giving full particulars of the competition, may be seen at our office.

Fanmakers' Competition Award.

On the recommendation of the assessors, the Court of the Worshipful Company of Fanmakers have awarded the Company's Silver Medal in the annual competition, 1924—(subject, The Ventilation of a Police Court), to Mr. J. Vernon Shaw, Tower House, Lodge-lane, Warrington.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Argentine Institute (Dec. 31; April 24). Copenhagen Bridge (Sept. 1; April 24). Newcastle Fire and Police Station (Oct. 8; June 12). Drammen Bridge (Oct. 1; May 29).

* Competitions when "warned" or vetoed by the R.I.B.A. are starred.

Posters designed by Mr. G. H. Butling, advertising the Annual Exhibition of Students' Work, Liverpool School of Architecture.

A Renaissance Composition.

By MR. H. H. GOLDSMITH (Architectural Association School of Architecture).

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Manchester Art Gallery Competition.

SIR,—There surely can be no doubt whatever that the chosen design is in every way most admirable and worthy of the occasion. The promoters have good reason to congratulate themselves on the result, and it would be a monstrous misfortune should this building not be carried out in accordance with the selection made by the assessors. The subject of competitions in the past has already furnished quite enough mishaps, without adding another catastrophe with regard to the corporate buildings of Manchester.

I make no apology for intervening in this way, and I do so with strict reference to impartiality; besides, I can claim in a practical sense, perhaps, something like a unique experience during many years in connection with a vast number of architectural competitions, not so much as a competitor as a reviewer for the professional press. The object of these contests absolutely consists in obtaining the most befitting design. As a referee, too, I know the difficulties incidental to such a choice, and particularly when the instructions issued to competitors happen to be over-elaborated by secondary details hampering a clear-cut scheme and masterly conception of outstanding merits. It would be invidious to recall instances, but this question, do what you may, will continue to arise as to whether an umpire should throw out such a scheme and recommend a vastly inferior one because, technically, it may more rigidly comply with the letter of the conditions issued by authority. Anyway, I do not claim, of course, that mistakes have not taken place; on the contrary, I am alive to the fact that sometimes the professional referees have been very blameworthy, because it is certain that wretched designs have occasionally been inexplicably chosen by assessors of excellent repute. In this case of the Art Gallery at Manchester no such reflection can be suggested, consequently it appears most untoward that protests of the kind now being published should be considered necessary. Anyhow, action of this character is deplorable and can do no possible good: the result inevitably must be disastrous. The author of the selected design is quite unknown to me, and I do not exactly remember who the assessors were. Being away from home I cannot look up their names. They cannot be wisely brought before any other tribunal unless fraud is suggested, and no one dreams of such an accusation.

MAURICE B. ADAMS.

Distribution of Wren's Work.

SIR,—Members of the University Athenæum, the new confederation of arts, held their first annual meeting at the Crystal Palace on Saturday (July 11, 1925), and in the discussion on the problem of city churches, the opinion was expressed that the best of Wren's work might be permitted to remain, while some other edifices, in close proximity, could be removed (after the manner of Crosby Hall) to places in the suburban belt, where new churches are needed.

The survey of the southern area of London from the north tower of the Palace impressed us with the thought that beautiful architecture adds to the charm of the wide-spreading picture. We considered that a distribution of a few of Wren's churches would be a benefit to the general public, and they would be seen to better advantage than they now are. The opinion of your readers on this subject would be greatly appreciated.

NELSON GODFREY.

Luton.

[This does not strike us as a desirable suggestion.—ED.]

New York Cathedral, and Some Theories.

SIR,—Referring quite lately in your "Notes" to this building, you quoted a correspondent whose remarks I should like, with your leave, to comment upon. But he puts one in this difficulty, that while condemning the "pseudo-Gothic" of this edifice, he suggests no clearer alternative than "a more robust and genuine form of building"—although, it may be observed, the thirteenth-century type apparently adopted is the most "robust" of the Gothic varieties. It must of course be presumed that this "more genuine form" of architecture equally excludes pseudo-classic and pseudo-Byzantine; so that one is moved to ask, What other precedent offers? Or is it proposed to experiment, stylistically, upon a cathedral? Surely it is a sound proverb which tells us that such a proceeding should be effected *in corpore vili*, as a beginning.

The term "pseudo" itself, however, is very much of a question-begging epithet, and although this building may have all the demerits described (as to which I know nothing), I think one cannot be far wrong in supposing that at the root of the whole criticism lies the familiar assumption that there can be no such thing as modern Gothic in any true or legitimate sense. In this case one may take leave to point out that certain basic elements of mediæval architecture are permanently valid. The pointed arch and vault, for instance, are valid and logical construction; the proportional system employed is a valid rhythmic system, however imperfectly elucidated so far; mediæval design, *qua* composition and disposition, remains æsthetically valid, and capable, moreover, of indefinite "freedom" in its application. Again, the characteristic treat-

ment of mouldings is as valid to-day as are the laws of light and shade which governed it; and, incidentally, far more so for us than that evolved under the skies of Greece or Italy; while even the typical conventions ruling in form and figure sculpture remain, æsthetically, valid conventions. Are such technical and artistic factors as these of so small account in the total validity and vitality of an architectural mode, that their permanent significance should be commonly ignored by the present-day critic of architecture? Must we not rather perceive in this fact a current prejudice and obsession which has never, to my knowledge, shown its justification? "Corporate impulse" may, indeed, have evolved or created these basic elements of style; but, once evolved, they are, I submit, established and available for always.

W. RANDOLPH.

The Church and Freemasonry.

SIR,—I have been giving considerable attention to masonic history for the last fifty years, and nothing has surprised me more than the letter by Mr. Hubert Burrows (*Builder*, June). Where did Mr. Burrows get his information? In the years mentioned, there were no speculative masons, and facts do not go beyond three hundred years.

HENRY LOVEGROVE.

Landed Property Practitioners (Registration) Bill.

We have received from Mr. John Stevenson, General Secretary of the Incorporated Society of Auctioneers and Landed Property Agents, a letter on this subject. As this is too long for publication in full, we have omitted some paragraphs of lesser importance.

Mr. Stevenson draws attention to the following paragraph appearing in the Law Society's Report for 1925:—

"Further discussions with the Surveyors' Institution have occurred with regard to this Bill. These have now culminated in a letter from the Surveyors' Institution stating that the Committee promoting the Bill had unhappily found that there was a fundamental difference of principle between the Committee and the Council of the Law Society, which is incapable of being reconciled, and must be adjudicated upon by Parliament. The letter states further that while the Committee will take steps to have the Bill introduced into Parliament in due course, they do not propose for various reasons to do so in the Session of 1925."

"It may be remembered," writes Mr. Stevenson, "that the Bill above referred to was first introduced in the House of Commons in 1923. It was presented by Sir Edgar Chatfield-Clarke. . . . Had the Bill been passed into law it is more than probable that thousands of those who had practised for many years would have found themselves precluded from registration and thus seriously hampered in their efforts to earn a livelihood in the profession. . . ."

S. ELEVATION

THE ARCHITECTURAL ASSOCIATION

PRESENTATION OF PRIZES.

On Friday afternoon last, at 34, Bedford-square, Lord Eustace Percy (President of the Board of Education) presented to students of the Architectural Association the scholarships and prizes for 1925. Opening the meeting, Mr. H. S. Goodhart-Rendel (President), who occupied the chair, observed that the past year had been a very successful one for the school. Their numbers were now getting up again to the high level that they reached immediately after the war. This did not mean, as many people appeared to believe, that they were overcrowding the profession; all it meant was that the school system was replacing the pupilage system. Generally speaking, the need for school training was increasing as the years went by, for the reason that people who were not so trained found that they could not compete with those trained in the schools. The Association, he continued, had had a good number of successes in prize competitions during the past year. The Tite Prize was awarded to Mr. D. H. Beatty Pownall, and Miss Sligh had gained hon. mention; Mr. Bennett had won the Boscom Studentship; Mr. Cameron, the Grissell; and Mr. Bucknell, the Godwin Bursary. He was very sorry to have to announce that the staff of the school was about to suffer some losses. Mr. Keesey had been appointed one of H.M. Inspectors of Art Schools; Mr. Rees would be leaving, perhaps only temporarily, to carry out work in competitions; and Mr. Keith Murray would be going also—and very sorry they all were to lose them. On the other hand he had some very good news to announce, that was, the foundation of two new scholarships of £1,000 each—one by Sir Walter Lawrence and the other by Mr. F. G. Minter. This was the most valuable sort of help they could get, and they were very grateful for it. The President then congratulated Mr. Rowland Pierce and Mr. James Burford upon their recent success in the Valetta Town-planning Competition. Mr. Pierce, of course, was a member of the school staff; while Mr. Burford was formerly a student and member of the staff. To Mr. Howard Robertson he offered congratulations on his success with the British Pavilion at the Paris Exhibition, which had been praised by all whose opinion Mr. Robertson might be expected to value and abused by all he would sooner abuse it. To Mr. Robert Atkinson they were perpetually grateful for the inspiration that he unfailingly provided; he was a living tradition.

Lord Eustace Percy then presented the scholarships and prizes, of which a list is given hereunder. At the end of this ceremony Mr. Howard Robertson presented a "special book prize" (as he described it) to the two members of the staff who would be leaving them—Mr. Walter Keesey and Mr. Keith Murray. Their going, he said, was a real personal regret to him; their loss would be felt very deeply.

Lord Eustace Percy then addressed the meeting. He was, he said, only just beginning to realise the number of educational bodies for which he was officially and personally responsible, including the Architectural Association. The whole question of education in the arts in this country was, he continued, one that needed very careful consideration. The movement in art education was nowhere more strong than in architecture, and rightly, for the architect was at last becoming a very important person. One of the most remarkable developments of the last few years was the growing appreciation of architecture. The planning of towns and the initiation of great building schemes had brought architectural problems to the notice of all classes of the community. He was very glad to be present on that occasion. He knew that in the discharge of his official duties he would receive and could rely upon the advice, impetus, and stimulation on the subject of architecture from those who were competent to pass an

opinion. He congratulated the Association on its work and successes, and wished it all good fortune in the future.

Mr. Maurice E. Webb, proposing a vote of thanks to Lord Eustace, said that that occasion was the second upon which the Association had been honoured by the presence of a President of the Board of Education. In more difficult times, Mr. Fisher, Lord Eustace's distinguished predecessor, had visited them. They dined him, and he stayed to look into the work of the School. The result was that the Board of Education decided to support the School, although it was not associated with a university or an art school. This was a great precedent, and the presence of Lord Eustace Percy that afternoon was, he thought, proof that a precedent had not been established in vain. They were all most grateful to the Board of Education for the help and moral support that it gave, and for the unfailing courtesy of its officials. Architectural schools, continued Mr. Webb, should, he thought, turn towards the university type or to that of their own school—the A.A. In technical schools, architects were too much associated with plumbers, chemists, and so forth. They wanted architectural schools to develop on the lines of Medical Schools and Law Schools. He regarded it as a great compliment that when the Board of Education wanted an inspector they came to the Association and appointed Mr. Keesey. He had very great pleasure in proposing a hearty vote of thanks to Lord Eustace for coming and presenting the prizes that afternoon.

Mr. Holland, seconding the vote of thanks on behalf of the students, referred to the sorrow that they all felt at the going of Mr. Keesey. Only those who had passed through the School under Mr. Keesey could realise with what skill and patience he coped with the difficulties of drilling into embryo architects what he might describe as the lighter and more charming side of architecture. To him (Mr. Keesey) they hoped to owe their sense of co-operation with the work of sculptors and painters. Though Lord Eustace might not perhaps know it, the students of the Association did not spend all their time over the drawing-board. In the winter they played Rugby and Association football, but gave most time to mixed hockey. In the summer they danced and played tennis and cricket; but, most important of all, they produced a pantomime. They hoped that they might be honoured with Lord Eustace's presence at the next production.

Lord Eustace, in reply, said that, with regard to architectural education, he would be docile if they would instruct him as to what he ought to do. If circumstances permitted, he would be very glad to see how students got up a pantomime.

Following is a list of the Scholarships and Prizes:—

Public School Entrance Scholarship (value £75 12s.), David Booth, Christ's Hospital.

Open Entrance Scholarship (value £75 12s.), Robert D. Scott, School of Art, Watford.

A.A. Essay Prize.—No competition.

First Year Course.—1st Prize, "Howard Colls" Travelling Studentship (value £15 15s.), D. R. Burles; 2nd Prize (books, value £5 5s.), H. R. Thompson. Art Subjects (books, value £3 3s.), E. Playne. General Progress (books, value £2 2s.), H. M. Peskett. Scholarship tenable for one year in Second Year Course (value £63), D. R. Burles.

Second Year Course.—1st Prize, A.A. Travelling Studentship (value £26 5s.), H. H. Goldsmith; 2nd Prize (books, value £10 10s.), G. I. C. Hight. Art Subjects (books, value £5 5s.), Miss B. Scott. General Progress (books, value £3 3s.), J. Buchanan.

Third Year Course.—Holloway Scholarship, tenable for two years (value £300), J. Breakwell. 1st Prize, "Henry Florence" Travelling Studentship (value £50), W. R. Brinton; 2nd Prize (books, value £21), R. P. Cumming; 3rd Prize (books, value £15 15s.), J. V. Hamilton.

General Progress (books, value £5 5s.), Dyce Saunders. "Alec Stanhope Forbes" Prize for best colour work during the year (books, value £5), J. Breakwell. Scholarship tenable for one year in Fourth Year Course (value £42), C. W. Sully.

Fourth and Fifth Years.—Design (books, value £10 10s.), R. M. Smith. Town Planning (books, value £10 10s.), Miss D. Lewis. Construction (books, value £10 10s.), A. E. Cameron. Colour (books, value £10 10s.), Miss M. R. F. Ellis.

Architectural Association Diploma (on satisfactory completion of five years School Course and a period of six months' office experience).—A. M. Allen, R. G. Booth, H. Braddock, A. E. Cameron, P. Cutbush, B. M. Flegg, G. G. Grant, F. E. Green, Miss A. F. Jones, Miss D. A. Lewis, W. T. Lord, D. F. Martin-Smith, Miss E. Meikle, A. G. Morris, F. Roscoe, Junr., Z. Sirotkin, Miss A. Sleight, R. M. Smith, V. J. Wenning, and J. W. Wood.

The following students have qualified for the Diploma subject to completion of six months' office experience.—Miss E. Moseley, Miss M. F. R. Ellis, F. L. Preston, and R. M. Walker.

Medal presented annually by the Société des Architectes Diplômés par le Gouvernement, Paris, to the best Diploma student of the year.—E. Wamsley Lewis.

R.I.B.A. "Henry Jarvis" Scholarship (value £50).—Not awarded.

Architectural Association Measured Drawing Prize, for the best set of measured drawings submitted in the School (value £10 10s.).—Prize divided: W. R. Brinton, W. V. Trubshawe and W. T. Lord; 2nd prize (value £5 5s.).—Prize divided: C. Green and Miss M. L. Bennett.

Royal West of England Academy School of Architecture (affiliated with the Architectural Association).—Prize in Design (value £5 5s.), awarded to Mr. J. H. Bourne.

The Late Senator Boni.

Giacomo Boni, the great Italian archæologist, who died last week, was born in Venice in the early sixties of the last century. He once said that he owed everything to John Ruskin, whom he met when he was a boy in Venice, and to whom he traced his first inclination towards intellectual things. "It was not till 1898," says the writer of a recent appreciation, "that he was appointed Director of the Forum excavations, with which his name will for ever be associated. Those who remember what the Roman Forum was before it became the 'Forum Boni' can alone estimate the magnitude of his work. He laid bare the pre-Romulean necropolis, he discovered the inscribed pillar found under the 'black stone.' With his work are connected the Basilica Æmilia, the Temple of Augustus, the shrine of Juturna, and the Byzantine Church of Santa Maria Antiqua. Outside the Roman Forum he excavated in that of Trajan, as well as at the tomb of Bibulus, while in recent years he was appointed Director of the Palatine excavations also. There he went down to depths never reached before; he traversed with his shafts every stage of Roman history, and he unveiled the lovely frescoes of the 'Iliad,' and some of the most beautiful mosaic pavement in Rome."

Nonsuch Palace.

Ewell Castle, Surrey, which is for sale, contains the ruins of the banqueting hall of ancient Nonsuch Palace. Ewell Castle itself is of no great antiquity—it was built in 1804 by Sir Jeffrey Wyattville, the restorer of Windsor Castle. It looks out over lawns and fields that slope gradually up to the old banqueting hall of Nonsuch Palace, once the property of Henry VIII, who destroyed the manor house and village of Cuddington, fenced in 1,600 acres of park, and built there a magnificent country retreat. The Stuart kings also favoured Nonsuch; until in 1670, Charles II gave it to one of his favourites, Barbara Villiers, Duchess of Cleveland, who dismantled it and sold the contents.

A COMPETITION SUGGESTION

By J. HEMBROW, A.R.I.B.A.

It has always seemed to the writer that our method of arranging competitions has been wrong. It is immoral to obtain one hundred different schemes for one fee—plus a few pounds. Though the arguments in favour of open competition are irrefutable and continually justifying themselves, the practice and the manner are at fault.

Having examined numerous sets of competition drawings on exhibition lately, notably those for the proposed Art Gallery at Manchester, one realises two things: one, that here is a competition where the winning design has been aptly and justly chosen (indeed, after a careful examination of all the sets submitted there does not exist a question), the author of which is a young man hitherto unknown who might not have achieved early merited repute if it had not been for the competition system. On the other hand, one is distressed by the enormous waste of effort of more than ninety others.

We all of us know what tremendous labour and self-sacrifice it means for an assistant entering in his spare time an important competition. It costs months of loving and anxious toil, and some expense too. Those of us who are principals know what it costs in money to prepare such a set of drawings in an established and fairly large practice. There is no doubt in the writer's mind that three-fourths of the competitors in this competition never had a chance at all of winning this or any other of similar importance, and they could fairly have been eliminated without being put to the trouble of producing purely abortive works which, even if pathetic or comic, cost their authors infinite labour and pains.

It seems altogether foolish and wrong to allow such people to give their labour so fruitlessly, and also wastes the time of the assessors (though not much, possibly) and merely makes some who may be good enough fellows in their sphere, mere laughing stocks. It should not be beyond the wit of the profession to find some solution.

And to repeat the statement that it is immoral to obtain a hundred schemes for one fee—it is certainly only common sense to extend it and say that qualified architects, whether they be principals or one of those gentlemen who give them loyal and careful assistance, should not be asked to prepare for nothing so elaborate a set of drawings as was required for this competition. It is wrong in principle and unsuited to the dignity of a profession. It brings the architects engaged to the level of street vendors shouting their wares one against the other.

It would seem possible to keep the benefits of the open competition, but reduce the waste of labour and effort to a minimum and eliminate the immoral entirely. It is quite true that where there is one opportunity and only one man can fill it, it is proper to get the most suitable man—it is more, it is a duty. But do we, in deciding, we will say, an important public appointment, parade every one of the hundred applicants before the Selection Committee, putting them to all the expense of railway travel and hotel bills? It would be too foolish—but that is exactly what we do in a big architectural competition.

In making an appointment the applicants are tabulated in alphabetical order, the table showing accurately their experience and qualifications. By this means it is a simple matter for the scrutineers to strike out a large number of gentlemen who are eminently unsuited to the position and whom it would only be a waste of time to interview. The remainder form what is called a "short list," which may consist of any number from three to eight or ten, and these gentlemen are interviewed, a selection made and their expenses are paid. They have only, therefore, suffered the cost of making their first application, which need not have been great. Surely, it should be possible to devise a parallel method in our big competitions. For the sake

of discussion I suggest it would seem that a possible solution would be as follows:—

It may be taken as true that any assessors, such masters of their job as were the assessors in the Manchester Art Gallery Competition, would not need a complete set of drawings to eliminate seventy per cent. of the competitors—one plan of one floor from those competitors would have been enough to judge upon and seventy out of the hundred aspirants would have been saved bootless toil and final discouragement. Of the remaining thirty one elevation would have been sufficient to clear two-thirds more and we should be left with ten out of, say, one hundred.

Now, say the premiums offered are under the present system £500, £300, £200; or £1,000 in all. Let it be agreed that the cost of preparing the complete set of drawings in an ordinary good practice is £50, and let it be agreed that it is necessary to guard against the person who would prepare a set of drawings with the £50 in view and so not give a fair test—which is really not so—we can redistribute our £1,000 in the following way: £500 to be the first prize and each competitor to receive £50 for his scheme.

To select these ten it is not necessary to have a full elaborate set of drawings. Any assessor of note and ability can eliminate many at a glance. It would seem enough if the problem were given in the usual way, and one plan of a given floor—that which the assessors consider offers the most difficult problem—one elevation, that which is most vital—and where there is a lay-out and block plan (the first two of 1-16th scale and the block plan such as is suitable). This would be all that would be needed to enable a judicious selection to be made and the competition system to be put upon an equitable basis, which at the present moment it is not.

EXHIBITION NOTES

ST. GEORGE'S GALLERY.

THERE is some distinction about the present small exhibition at the St. George's Gallery, for it holds some fine drawings by Brangwyn, Austin Spare and Lovat Fraser, besides some very interesting small studies by Gordon Craig. In his ship unloading at London Bridge, Brangwyn gives us a perfectly modulated piece of tone and colour, whilst his drawing of a black engine looming up upon a blue-grey background, Cannon-street Station, is an impressive and satisfying picture. It seems almost a pity that such admirable studies of the nude by Austin Spare were not of a pleasanter nature; they look very true, but they emphasise some of the less pleasing aspects of the female form. This little exhibition is much above the average in quality.

MANCHESTER ART GALLERY COMPETITION

Mr. Theodore Sington, writing to the *Evening Chronicle* (Manchester), with further reference to the Art Gallery Competition, says that the City Council must disown the assessors' award; failing that, legal proceedings may be taken to test the meaning of Sections 10 and 13. "I respectfully submit," he continues, "that the only course open to the City Council is to organise another competition, with assessors appointed by the R.I.B.A., limited to the recent competitors, with fresh instructions. As the site will not be available for several years, there is unlimited time. There should be at least six clear months after the answers to questions have been sent out. To save trouble, the elevations could be to a scale of 12 ft. to the inch, and the large scale detail might be omitted. An important point is whether the Art Gallery should be asked to the buildings facing Piccadilly, Portland and Baker-streets. . . . As the City Council may organise a competition for the Reference Library, it is most important, in the interests of both the Corporation and competitors, to have it authoritatively stated whether conditions are to be adhered to or ignored."

ROYAL INSTITUTE OF BRITISH ARCHITECTS

Amendments of the By-laws.

By an order of the Lords of His Majesty's Privy Council dated July 10, 1925, the following amendments to By-law 29, with regard to the representation of Dominion Allied Societies on the R.I.B.A. Council and the addition of the Chairmen of the four Standing Committees, were approved:—

By-law 29 (d).—To be amended by the addition of the following words:—"Provided always that in the event of the representative nominated by any such Society being absent from the United Kingdom such Society shall be entitled to nominate a member of the Council of the Royal Institute for the time being who is practising in the United Kingdom to represent it upon the Council during the absence of the representative first so nominated as aforesaid."

By-law 29 to be amended by the addition of the following words after paragraph (g):—" (h) The Chairman for the time being of each of the four Standing Committees referred to in By-law 52."

Intermediate Examination.

The Intermediate Examination, qualifying for registration as Student R.I.B.A., was held in London from May 22 to 28, and in Leeds from May 22 to 27. Of the 83 candidates who presented themselves 42 passed and 41 were relegated. The successful candidates were as follows, the names being given in order of merit as placed by the examiners:—

T. M. Galbraith, A. E. Long, F. Greenwood, J. H. Ecclestone, J. Cohen, H. Greenwood, F. G. A. Hall, G. L. Thompson, R. F. Orfeur, W. L. Ward, J. W. Lee, F. E. Parkes, W. E. Troke, G. E. Tassell, A. E. J. Goodall, C. C. Bowring, J. F. Stott, C. T. Ayerst, R. N. Brown, G. S. Buckingham, H. G. Cadman, J. F. H. Checkley, J. H. Clark, R. R. A. Dunn, G. F. Evans-Vaughan, J. E. Gale, G. S. Harrison, W. D. Hartley, V. C. Hunt, E. L. Jopling, E. J. Liddle, N. A. Lyon, E. C. Mount, A. G. R. Payton, S. H. Rushworth, J. A. Schofield, T. R. Shaw, T. E. D. Skurray, A. Slade, H. C. D. Whinney, D. A. Wilkie, N. B. Wood.

Notes from the Minutes of the Last Council Meeting.

Overcrowding of the Architectural Profession.—The Council approved and ordered the publication of the Report of the Joint Committee of the R.I.B.A. and the Association of Architects, Surveyors, and Technical Assistants on the subject of the alleged overcrowding of the architectural profession. (See p. 177.)

Improvement of R.I.B.A. Organisation.—The Council approved a scheme for improving the work of the Council and Committees of the R.I.B.A., which involved the creation of an Executive Committee and the holding of monthly instead of fortnightly meetings of the Council.

R.I.B.A. Soirée.—It was decided that the occasion of the completion of the amalgamation of the Society of Architects with the R.I.B.A. should be marked by a Soirée, to be held in the R.I.B.A. Galleries in the coming autumn.

British Architects' Conference, 1925.—A cordial vote of thanks and appreciation was passed in favour of the Northern Architectural Association for having organised and carried out the arrangements for the Conference with such conspicuous success.

The University College of the South-West of England.—Mr. J. Leighton Fouracre was appointed to represent the R.I.B.A. as a member of the Court of Governors of the University College of the South-West of England for the three years beginning on August 1, 1925.

The Institution of Public Lighting Engineers.—Mr. W. Alban Jones (President of the Leeds and West Yorkshire Architectural Society), was appointed as the representative of the R.I.B.A. at the second annual meeting and conference to be held at Leeds on September 14, 15 and 16, 1925.

THE ALLEGED OVERCROWDING OF THE ARCHITECTURAL PROFESSION

In the year 1924 a joint Committee was set up by the Council of the R.I.B.A., consisting of three representatives of the R.I.B.A. and three representatives of the Association of Architects, Surveyors and Technical Assistants, under the chairmanship of Mr. Maurice E. Webb, F.R.I.B.A., for the purpose of examining into the question of the alleged overcrowding of the architectural profession. This Committee has just completed its work and submitted a report to the Council of the R.I.B.A. as follows:—

To the President and Council of the R.I.B.A.

The Joint Committee set up by the Council of the R.I.B.A. and the Architects' and Surveyors' Assistants' Professional Union (now the Association of Architects, Surveyors, and Technical Assistants) have held four meetings and have carefully considered their Reference, which was as follows:—

"That the Council set up a small joint Committee of six to examine and report within six months upon the alleged overcrowding of the profession. The Board of Architectural Education and the A.S.A.P.U. to be asked to give this Committee all the information and statistics they possess as to numbers of students in schools, pupils in offices, entrants for R.I.B.A. Examinations, &c., and generally assist in the inquiry." The Joint Committee was constituted as follows:—

Mr. Maurice Webb	} representing the R.I.B.A.
Mr. Arthur Keen	
Mr. Francis Jones	
Mr. Charles McLachlan	} representing the A.A.S.T.A.
Mr. F. R. Jelley	
Mr. J. W. Denington	

From the statistics and other information carefully collated and placed at our disposal by the R.I.B.A. and the A.A.S.T.A., we beg to report that we have reached the following conclusions:—

1. That there are to-day some 12,000 architects (this figure does not include 647 temporary architectural draughtsmen in the Civil Service who were returned in the Census as Civil servants), including 1,300 pupils and students in England and Wales, as against 7,000 forty years ago. These figures are obtained from the census returns, and represent an increase of 0.65 per cent. The population of England and Wales has increased from twenty-six millions to thirty-eight millions during the same period, representing an increase of 46.15 per cent. In other words there is to-day one architect or potential architect to every 3,167 of population in England and Wales, compared with one to 714 forty years ago.

2. It appears, therefore, that the number of architects who describe themselves as such in the census returns has risen in a greater proportion than the population during the past forty years.

3. Approximately four hundred would-be architects are now being trained in schools providing whole-time courses. So far as can be ascertained there are nine hundred pupils or learners in offices, and of this number about one hundred are taking part-time courses in a recognised school of architecture. This means that there are about 1,300 youths to-day in training for the profession. These figures do not include the comparatively large number of persons who enter the profession irregularly or incidentally by promotion from the office-boy or clerical grades.

4. If three and a-half years be taken as the average period of training before wage-earning begins, it will be seen that some four hundred young architects presumably enter the profession every year. Of this number three hundred have been pupils and one hundred have undergone whole-time training in the recognised schools.

5. If the average professional life of an architect be taken as thirty-years (this figure is somewhat conjectural, but the Committee believe in

the absence of accurate information, which they made every effort to obtain, that it is a reasonable average), it follows that sufficient men are being trained to maintain the total numerical strength of the profession at 12,000. This does not allow for wastage, which will probably account for the difference between this figure and that of the 10,700 architects who are earning a living to-day as professional men.

6. Admitting that these figures are incapable of absolute proof, the Joint Committee feel that at least as many men are entering the profession as the profession can at the present time absorb, and are of opinion that steps should be taken, not to limit the numbers entering the profession, but to warn the profession and the public of this fact, and to ensure that the training given to students wishing to become architects is thoroughly adequate.

7. From the evidence available, of which the salient parts have been quoted above, and from the evidence of those responsible for the keeping of employment registers, the Committee believe that there is no overcrowding so far as the highly-trained, competent man is concerned. But they believe also that there is a surplus of indifferently trained persons, especially amongst the junior grades.

8. Finally, we consider that the utmost importance attaches to the following points, which we believe should be widely circulated to the profession:—

(A) OVERCROWDING NOT CAUSED BY THE SCHOOLS.—The figures which we have examined prove beyond question that the recognised Architectural Schools are in no way contributing to the overcrowding of the profession. Owing to their lengthy courses and to the cost of maintaining a school student away from home, the tendency is, if anything, the other way. As an illustration of this opinion it may be mentioned that in the districts where the pupilage system still survives, namely, everywhere, except in London and Liverpool, there are only some twenty-five whole-time students per annum who are passing through the schools.

We therefore recommend:—

(i) That the Board of Architectural Education be requested to get into touch with all unrecognised schools, art schools and polytechnics with a view to the improvement of the architectural courses at such schools.

(ii) That letters be addressed to headmasters of all public and secondary schools, to the Association of Headmasters and to all educational authorities setting forth the method of entry into the architectural profession.

(B) TRAINING AND MAINTENANCE.—Architects in practice should be reminded of the unfairness of taking a boy into an office in a junior capacity without making adequate arrangements for his education and training if he shows a bent for architecture. In this connection the Committee desire to record their whole-hearted support of the present proposals of the Board of Architectural Education for the establishment of Maintenance scholarships, which they consider will be invaluable as a means of encouraging the growth of whole-time training.

(C) CASUALISATION OF EMPLOYMENT.—There is a growing tendency to casualise employment in architects' offices. Assistants are engaged for special work for a few months only, and are then cast aside to swell the employment registers. We recommend that private practitioners should be urged to avoid short-term employment of assistants wherever possible, and to remember the evils in the building and other industries of which casual labour has been the cause.

(D) INTERCHANGE OF ASSISTANTS.—It is suggested that by local co-operation more particularly between the Allied Societies and the branches of the A.A.S.T.A., some system of interchange of assistants between offices might relieve the present difficulties of casual labour.

We recommend that the Allied Societies be urged to elaborate some such system as this. We also recommend that students, on termination of their pupilage, be recommended for and aided to obtain employment if possible in some town where they can obtain useful experience and further professional tuition in some good evening school.

(E) TEMPORARY OFFICIAL STAFFS.—Government Departments and Municipal Authorities are particularly prone to the engagement of temporary staffs, a practice from which many cases of extreme hardship have resulted and will result. For example, at the present time the War Office, the Admiralty, H.M. Office of Works, the Board of Trade, the Air Ministry, the Ministry of Transport, the Ministry of Health and the Post Office employ 647 temporary and unestablished draughtsmen. If the system cannot altogether be avoided, these authorities should be urged to alleviate the hardships which it entails.

(F) EDUCATION OF PUPILS AND ASSISTANTS.—We recommend that all architects' assistants who have not passed the R.I.B.A. Examinations should be urged to do so. We also recommend that no articulated pupils should be accepted in an architects' office under the age of 17 years, and unless they possess qualifications of the standard required for Probationership of the R.I.B.A. or for entrance to a recognised school of architecture. We also suggest in this connection that the Board of Architectural Education should be invited to consider whether it is not possible to provide some kind of training syllabus for the use and guidance of architects who take in pupils. This suggestion applies particularly to districts where school education is not easily attainable.

(G) INDENTURES.—We recommend the Council of the R.I.B.A. to resist the practice of incorporating in indentures clauses restrictive of future practice within a certain prescribed area, and to encourage the use of the R.I.B.A. Form of Articles of Pupilage.

(H) OVERCROWDING IN SCOTLAND.—Owing to the difficulty of obtaining up-to-date statistics and other information, Scotland has not been included in the field covered by this report, which deals with England and Wales only. We recommend that the Incorporation of Architects in Scotland be invited to initiate a similar inquiry into the question of overcrowding in Scotland.

BOARD OF ARCHITECTURAL EDUCATION

Conference with Teachers of Building.

On Tuesday, in the R.I.B.A. Galleries, the Board of Architectural Education held a conference with the representative teachers of building who are in London on a course arranged by H.M. Board of Education. Papers were read on "The Teaching of Building Construction from the Architects' and from the Teachers' Points of View," by Professor Beresford Pite and Mr. M. S. Briggs, H.M.I., respectively. A discussion followed. There was an exhibition of architects' working drawings in the galleries.

Professor Pite dealt with the teaching of building construction from the architects' point of view. He laid it down that the primary element of architecture was construction or building, but it must be animated by intelligence. The animating intelligence which converted a heap of material into a useful building was architecture. The second primary element was idea, and the combination of both elements in education was vital.

Mr. Martin S. Briggs, who spoke from the teachers' point of view, urged that building construction must never be taught as an isolated subject. It was impossible to understand building without some training in mathematics, science, and geometry. In a two years' course they could take the student through the constructional work of an average dwelling house, but not much more. There should be supplementary lessons in building science in a laboratory.

New Premises for Messrs. Courtaulds,
St. Martin's-le-Grand.

This building, now being erected, has frontages in St. Martins-le-Grand and Foster-lane, the latter being used for the service of the company's merchandise. It has a width of 73 ft. and a depth of 139 ft., the site having been reduced on both frontages for street widenings. The building has ten stories, including the basement and sub-basement, which extend 22 ft. below pavement level. These two lower floors are devoted to the boilers and services of the building and the fire-resisting compartment stores for goods. The floors above ground are reserved for show-rooms, offices, and staff welfare. The main entrance in St. Martins-le-Grand is intended for the use of the company's clients coming to the upper floors of the building, the staff entrance being in the rear. The entire ground floor is set apart for the receipt, examination and issue of goods, a loading dock being arranged in Foster-lane for the access of lorries, which can be withdrawn from the congestion of the street while delivering and receiving.

Light being an essential requirement, the main staircase and passenger lifts are placed well within the building in the position least likely to interfere with it, access to the staircase hall being gained through the main entrance loggia and a vestibule. The staff lift is in the well of the staff staircase, and a goods lift serves every floor. The first floor is occupied by the large open tapestry department, offices for a portion of the directorate being placed across the main front. The second floor is somewhat similar in arrangement, and is to be used for the shipping or foreign department, the private rooms on the main front being set apart for the use of clients and foreign visitors. The share and transfer and counting-house departments occupy the whole of the third floor, the boardrooms and directorate being placed on the fourth floor, a small portion of this floor being reserved for accountants and auditors. The housekeeper's quarters, kitchens, staff luncheon and club rooms are situated on the fifth floor, a small lift from the kitchens serving meals to the directors' luncheon rooms on the floor below. The kitchen is designed to cook for 300, the staff dining-room being intended to serve the staff in two batches of 150 each. The sixth and seventh floors are for showroom purposes, patterns, samples and extension. The seventh floor has no windows to the south or west in order to shut out the sun, and has a large number of north lights of a saw-tooth section in the roof to gain as much light of a clear quality

as is possible. A somewhat unusual feature in the design of these floors is the arrangement of the dormers facing Foster-lane, which, complying with the London Building Acts, enables a great amount of window space to be gained, while at the same time, almost throughout the frontage of the building though in a sloping roof, the internal treatment is vertical, the concrete portion between the window-cills and the floor forming a strong longitudinal beam. In buildings of this character where daylight is of such importance this extra window arrangement is considered of value. The staircases are carried up to the roof.

The façades are of a somewhat studied simplicity in Portland stone crowned by heavy cornices, for which the carving is being done by Mr. Henry Poole, A.R.A. A factor in the Foster-lane elevation is the wide opening for the loading dock, which has an unobstructed span of 42ft., over which the superstructure is carried. The sixth floor on the St. Martins-le-Grand front, with the consent of the London County Council, is set back and built vertical. No windows being required on the seventh floor on this front, the roof-slope is covered with lead having heavy vertical rolls.

The land having been Crown property and in Crown occupation ancient lights had not accrued, and the problem has, therefore, been freed from troubles of this nature. The building is designed in accordance with the requirements of the London County Council (General) Powers Act, 1909, of steel framework and is of fire-resisting a quality as it is possible to devise, with solid concrete floors specially designed by Dr. Faber. The requirements conditional on the various consents necessary from the County Council have added very considerably to the cost of the building. In view of this large additional outlay on a building already designed under a stringent Act intended for the prevention of fire, it may appear desirable for architects wherever possible to advise clients to build outside the county area. It is impossible to estimate in advance the cost of these growing demands, which can only have the ultimate effect of a deterrent to building.

The foundations on this site are particularly difficult, inasmuch as there are about 13 ft. of ballast overlying the blue clay, the lower 12 ft. of which are water-logged, and though parts of it are firm other parts are sufficiently unreliable to involve an improper risk of founding so tall and permanent a building upon it, having regard to its water-logged condition and the fact that there is much building likely in the neighbourhood in the future which may withdraw the water. Under these circumstances it was decided desirable to get down to the blue clay. As the contract of sale imposed the conditions that no pumping should be done in such a way as to withdraw water from the ballast because of risk to the neighbouring Post Office building and to St. Paul's Cathedral, the problem of carrying these foundations down on the blue clay without violating these conditions presented some difficulty. These difficulties have been overcome by the use of steel sheet piling, and it was found that piling supplied by the British Steel Sheet Piling Co., in which alternate sections are 5 in. joists with a special section between gripping the flanges of the joists, was the most satisfactory arrangement, and since this section was adopted no trouble has been experienced.

The superstructure is designed as a steel-frame building, and perhaps the most interesting feature of the steelwork is the large plate girder of nearly 50 ft. span, carrying a load of approximately 500 tons, which gives a wide entrance for motor lorries on the Foster-lane front. A drawing of this girder is shown. The water supply is obtained from an artesian well, and the heating consists of "Classic" type of radiators in all rooms except the board-room and one of the directors' rooms. The electrical supply is obtained from the companies, with, however, the provision of a stand-by set in case of a breakdown or strike.

All the floors are provided with sprinklers, in view of the great value of the materials stored in the building and of the requirements of the London County Council. The floors are of solid reinforced concrete finished on top with oak boarding. The retaining walls are self-supporting "L" type reinforced concrete walls, approximately 30 ft. high.

The building has been designed by Mr. S. Sullivan, F.R.I.B.A., in collaboration with Dr. Oscar Faber, O.B.E., the consulting engineer. The general contractors are Messrs. Holloway Bros. (London), Ltd. The steel windows, etc., are by the Crittall Manufacturing Co., Ltd.; sanitation by Dent & Hellyer, Ltd.; marblework by the Art Pavements and Decorations, Ltd.; lifts by Waygood Otis, Ltd.; strong-room doors by Chatwood Safe Co., Ltd.; rolling sheet shutters by A. I. Gibson, of Twickenham; ornamental plasterwork by George Jackson & Sons, Ltd.; steelwork by Redpath, Brown & Co., Ltd.; heating by Broadhurst, Craig & Ching, Ltd.; the quantity surveyor is Mr. Louis C. Veale, F.S.I.

Downside Abbey.

The work recently carried out at Downside Abbey by Sir Giles Gilbert Scott, R.A., consists in adding seven bays of the nave to the existing church, together with chapels adjoining. Before the addition of these bays the church consisted of choir and transepts, with chapels grouped around the choir, and an unfinished tower. The choir was designed by the late Mr. Garnett, and the transepts, chapels, and tower by the late Messrs. Dunn & Hansom. The work recently completed has been to a certain extent influenced by the existing building. It does not yet complete the nave, which will eventually be a few bays longer; a temporary wall now closes in the west end. Bath stone has been used for the work both internally and externally. This has been supplied and worked by the Bath & Portland Stone Firms, Ltd., but the actual building has been entirely carried out by the Abbey's own staff of men, under the supervision of their resident clerk of works. The carving was entrusted to Messrs. Wall Co., of Cheltenham.

The East Kent Coalfield.

Mr. H. E. H. Rice, of Tilmanstone, who has succeeded the late Lord Milner as chairman of the committee set up to confer with the owners and miners for the purpose of meeting the needs which will arise from the development of the East Kent Coalfields, has stated that Professor Abercrombie has made a very careful survey of the position and his report will soon be available. The area concerned roughly the whole of the county east of a line drawn from Folkestone to Whitstable and including Canterbury. Turning to figures and prospects of the immediate future, Mr. Rice said at present two collieries were raising coal, Chislet and Tilmanstone—one at Snowdown would, in all probability, be raising it in a few months' time, and another at Northbrook which had not yet been sunk to the coal, would probably be two years before raising. With regard to the population to be expected within either of the mines was going at full production, which was nowadays the necessity for economic success, each would be surrounded by from 10,000 to 12,000 people. That gave for the two mines 40,000 to 50,000 population, and it was necessary to consider steps for accommodation of them. Many people—and some great capital—considered that the increase would not be at 50,000, but would hardly be less than a quarter of a million in time. Probably 200,000 or 300,000 houses would be built a year until the total required had been erected. Mr. Rice also considered that with all this increased population, new schools, new churches, and other buildings would be required, and he spoke with hopefulness of the problem being met and solved with success.

THE ROYAL SANITARY INSTITUTE CONGRESS AT EDINBURGH

THE Congress of the Royal Sanitary Institute was held last week in Edinburgh, from July 20 to July 25, under the presidency of Sir John Gilmour, Bart., M.P., Secretary for Scotland. Some 900 delegates attended. The first function was a public luncheon held in the hall of the University Union, previous to which Lord Provost Sir W. L. Sleigh and other municipal representatives received the visitors.

Mr. E. F. Macpherson, proposing the toast of "The Institute," said there was a hope that, with the development of medical research, dreadful diseases might vanish away like a bad dream, as well as those conditions of darkness, of impurity, of bad housing, and all the attributes of human discomfort to which diseases owed their genesis. The social reformers found their footsteps dogged by that dread spectre, Economy, with the "Geddes axe" slung over his shoulder. They knew the resources of the nation were not bottomless, but still good progress had been made, and in that the Royal Sanitary Institute had borne no unworthy part. There were attending the conference representative men who had devoted their lives to some particular branch. Their Local Authorities were taking an active part in the proceedings. He was impressed, Mr. Macpherson said, by the programme of the Congress. There were no fewer than fifty-two items embraced in the subjects of discussion.

Sir Henry Tanner, responding, said the Institute was established immediately after the passing of the Public Health Act, 1875. Next year would be their jubilee. They had attending the Congress representatives from China, France, Egypt, Poland, and the United States.

Sir John Gilmour's Address.

Sir John Gilmour delivered the inaugural address in the M'Ewan Hall, in the course of which he said that this was the first time the Institute had met in Edinburgh. Few better places could have been chosen for the purpose. For here one breathed the very atmosphere of all that stood for a long and notable tradition in medical achievement; here we had a medical school known for its progress and noted for its enlightenment; here, indeed, was one of the greatest medical capitals of the world. What more fitting background could they wish for the Congress than that? To understand the course of public health development in Scotland, one must first take account of the geographical features of the country. As to the all-important subject of water supply, it would be difficult to find any other area of a similar size that could equal us in available resources of river and loch. There was no place in Scotland remotely removed from a source of water supply. An adequate supply of wholesome water—both for consumption and for drainage purposes—was almost the first essential in any efficient system of sanitation. Other countries were sometimes forced to carry water by artificial means to their centres of population for incredible distances. Scotland stood, if not unique, at least equalled by few in her natural advantages in this respect. In nearly all the burghs of Scotland there was now a reasonably sufficient supply of clean water. The service was led right to the water-tap, inside the houses, and the old-fashioned well or pump was found only in exceptional cases. Drainage, too, was largely water-borne, and for the most part satisfactory. But matter had by no means stood still in the county areas. Much useful work had been done by making use of the ingenious machinery of the special districts. On the whole the infectious disease provision in the landward areas had reached a satisfactory level. The county hospital was, by reason of the smaller population it requires to serve, a smaller unit than was found in the burghs and large towns. Often this meant that the interests of economy and efficiency must suffer.

He thought, therefore, that in the future their efforts should be directed towards the enlargement of the county unit, the elimination of the small hospital, and the organisation of a service over a wider area which would enable combining authorities to pool their resources, and so attain a greater measure of efficiency and economy in administration.

With regard to the housing problem, the speaker said it was unfortunate that precise information was not obtainable with regard to the demoralisation, the ill-health, and the mortality among our people that could be directly attributed to life in the slums, and in houses that were below the datum-line of habitability. He felt certain that if such information could be condensed into a comprehensible statement of fact, the nation would receive a shock the like of which it had rarely before experienced. We must free our minds from preconceived notions that the only materials of which houses could be built are brick and stone, and we must be prepared to investigate fairly and without prejudice the possibilities of other materials, and of other methods of building, than those in operation in the past. Whatever criticisms had been made on the standard of construction, the people would not be huddled together in congested villages and towns as in the past. To use the striking phrase of the Royal Commission, "the clotted masses of slums" in the great cities would not be repeated in the developments of the twentieth century.

Housing of Town Population.

Opening the Engineering and Architectural Section, Professor T. Hudson Beare said the most urgent of all the many post-war problems which the country had had to solve was that of providing adequate housing accommodation for both the urban and the rural population, on, if possible, an economic basis. When the Armistice was signed in 1918, one of the first reconstruction questions to be taken up by Parliament was that of the housing of the people. On the face of it, the problem seemed one that could be easily dealt with, but unfortunately the optimistic forecasts proved to be lamentably wrong. The most serious of the many factors which prevented the possibility of the rapid provision of houses was the economic one. The only solution of the difficulty was to utilise building materials of a type which would not require so much skilled labour as brick, stone, &c. The question of the housing of town populations was closely interlocked with other engineering problems, notably that of the provision of cheap and efficient mechanical transport. If they were not to

create once more the same evils in regard to slum areas as those inherited as a result of the lack of foresight of our forefathers, the rehousing of the urban population on satisfactory lines meant a great diminution of the permissible population per acre of habited area. That involved that the housed population would, in the majority cases, have their homes in a quarter of town which would be at a considerable distance from that in which they spent their working hours, hence any rehousing scheme to be a success must be one in regard to which the transport difficulty had been fully considered and adequately provided for, a scheme that was equally necessary, whether the housing scheme was one which provided a series of self-contained houses or one in which the tenement system was adopted.

The Modern Plumber.

Mr. Walter Scott, reading a paper on "The Modern Plumber and His Work," said that the plumbing of to-day was very different from that of fifty years ago. While the early plumbers exercised all the skill of their hands in the manipulation of lead, with scarcely a thought for the science of hygiene or the health of the community, the plumber of to-day, owing to the great inroads of science into his trade and changed conditions generally, was more intelligent, and necessarily occupied a higher position amongst his fellows and in the community at large, because he combined with the routine of his trade and the uses of his hands and tools an intelligent mastership.

National Registration of Plumbers.

Sir Archibald Craig, LL.D., member of the Court of the Worshipful Company of Plumbers (London) and Secretary of Glasgow Registration Council, in a paper on "The National Registration of Plumbers," stated that the movement had originated in a reaction of the grave evils arising from defective sanitary conditions and the fact that there was no trade on which health and comfort of the home was more dependent than that of the plumber. The ancient Guild, the Worshipful Company of Plumbers, which dates from 1327, placed itself at the head of the movement, and had spent its resources freely in promoting it. A register was created to enable the public to distinguish and select craftsmen who had given evidence of their skill and competency as plumbers, and undertaking the responsibility of attaching to registration. The movement was aimed at the better training of the rising generation of plumbers by a proper system of apprenticeship combined with technical education.

Homes and Hygiene.

Mr. Arthur F. Wickenden, A.R.I.B. (Imperial College of Science and Technology), reading a paper on "Economic Homes,"

hygiene," said the suggestions and criticisms in that short paper were intended to draw attention to several matters in design, construction and equipment of small dwellings which offer scope for the application of hygienic principles without unduly increasing cost. As a basis for the matter under consideration it was suggested that three important essentials to hygienic homes were: (a) plenty of light and fresh air; (b) adequate room to live decent and well-ordered; (c) every facility for promoting cleanliness. Although the value of sunlight and fresh air was urged with increased vehemence by modern medical and health authorities, yet strangely enough, the tendency of present-day house building was to reduce the sizes of windows. The latest types of casements, although possibly more artistic in appearance, provided in many instances much less window area than the hung sashes installed in pre-war houses. Sliding casements to fold back and leave the entire window space open when the weather was favourable did not seem to prove very attractive to builders, even though such an arrangement was quite a practical and common-sense proposition and might even be made an economical one.

With regard to the provision of adequate sleeping accommodation, it must be admitted that the dimensions of rooms in many modern houses for the poorer classes were far too restricted, and an even worse defect was the lack of sufficient accommodation for storage purposes. Much of the ordinary household lumber and domestic equipment inseparable from normal family life had to be stored in living rooms and bedrooms, thus creating a litter all over the house, and being conducive to untidy and slovenly habits. There were numerous details in the construction of houses that could assist in promoting the essential cleanliness in the house. Although elaborate cornices to ceilings, skirtings, chairtraces and other such features were less fashionable than in years gone by, yet perfection in such matters had not yet been reached. Built-in cupboards and wardrobes were frequently finished with boarded tops about a foot or so below the ceilings, instead of being taken to the full height of the room. Fine harbours for dust and dust were thus provided. Deep cupboards, stair cupboards with insufficient ventilation, inaccessible spaces behind baths and over fittings all formed traps for dirt, and could often be avoided by care and common-sense planning. In the furnishing of the home, carpets, pictures, ornaments, &c., should in the interest of cleanliness be reduced to a minimum.

Workmen's Dwellings.

Reading a paper on Workmen's Dwellings, Mr. John Wilfrid Green, M.Inst.M. and C.E. (City Engineer, Durham), said the house shortage was not a consequence of the war alone, the Housing Act of 1909 seriously affected cottage property (the building average decreasing from 10,000 to 84,000 per annum). During the war years building came to a standstill, and Rent Restriction Acts of the present time had stopped private enterprise building for letting purposes. Assuming there were 8,000,000 houses in the country, and the life of this class of property to be 80 years, 100,000 houses were required annually to replace old property alone. The marriage rate of the country was about 300,000 a year, and it had been said that the new houses required under this head were at least 30 per cent. of that number. There were also large numbers of houses in a dilapidated and insanitary condition, which only awaited an easing of the situation before being condemned.

Under existing conditions it was questionable whether our housing ideas were not too idealistic, or whether we should insist on a density of five houses per acre, in view of the density of houses in which people are now living, and the sub-letting of these houses which occurred. Though large gardens might be appreciated by day tenants, it must be admitted that the appearance of many housing schemes showed that the occupants had no inclination after a hard day's work, and perhaps some time spent

in travelling, to attend to a garden. To provide houses at twelve to the acre in the vicinity of large towns necessitated the land being acquired at a considerable distance from the area in which people worked, and as, unfortunately, conditions of employment were often insecure at the present time, people did not feel inclined to remove to these newly-developed areas, and spend money in travelling to and from their work each day. It was questionable also, whether the few hours spent at night in the more open space compensated for the trying time spent in the crowded atmosphere of 'bus or train after a hasty breakfast or a hard day's work, and perhaps long overtime at shop or office. The author considered that suitably designed blocks of flats should receive more sympathetic attention from housing committees, and accommodation provided for old couples and others who did not require three bedrooms and a bathroom. Blocks of flats with separate front doors, built in addition to the type of house now generally favoured, would give an opportunity of catching up. Such houses could naturally be erected at less cost than the semi-detached and block of four type now being put up, the less acreage of land, and the decreased amount of roadwork, sewerage and fencing, and the less cost of gas and water services, &c., would allow of more families being decently housed in a given time for a given capital sum. The point was that something intermediate might usefully be done between the present slum condition of our cities and the garden village.

At present, about 40 per cent. of the hours spent in the erection of house property was accounted for by the bricklayer and his labourer, and about 12 per cent. by the plasterer; the carpenter, joiner, slater, plumber, and painter making up the rest. The author thought that to prevent exploitation such as characterised the "Addison Scheme," alternative materials and trades should have careful consideration. To a large extent the bricklayer and mason had been displaced in the making of bridges, and there seemed no reason why we should not depart from the methods of Nebuchadnezzar in the construction of buildings.

INCORPORATED INSTITUTE OF BRITISH DECORATORS

PRESENTATION OF GOLD MEDAL.

An interesting ceremony took place on Monday evening last at a *Conversazione* held at the Painters' Hall, Little Trinity-lane, when Sir Banister Fletcher (accompanied by Lady Fletcher) presented the Gold Medal of the Incorporated Institute of British Decorators to Mr. Leonard A. Shuffrey, the distinguished decorative artist. Among those present were the President of the Institution, Mr. Arthur Seymour Jennings, and Mrs. Jennings, Mr. Octavius Satchell (Master of the Painters' Company), Mr. W. Stewart Green (Past-President of the Institute of British Decorators), Mr. Hugh Davies, Mr. Martin S. Briggs, Mr. Manson, Mr. Edwin Lott, Mr. Fred Dakin, Mr. W. H. Cantrell, and many others, including a number of teachers of building subjects who are now taking a refresher course of instruction in London, under the aegis of the Board of Education.

Before asking Sir Banister to make the presentation, the President, in the course of some introductory remarks, pleaded for an increase in membership of the Institute to enable them to broaden the scope of their work, especially in the direction of establishing more travelling scholarships. Mr. Jennings concluded with the prophecy that women were likely to engage more and more in decorative work because of the natural sense of colour which they possessed.

Sir Banister Fletcher, in presenting the Gold Medal to Mr. Shuffrey, said he did so with the greatest possible pleasure, for he and Mr.

Shuffrey were very old friends. Their friendship went back more years than he cared to remember. Briefly tracing Mr. Shuffrey's career, Sir Banister recalled that he (the Medallist) became a member of the Architectural Association in 1871, and in 1880 founded the business of Shuffrey & Co., in collaboration with George Sherrin, at 38, Welbeck-street, Cavendish-square, for the design and manufacture of objects required in interior decoration—wall-papers, fire-grates, chimney-pieces, plaster ceilings, tiles, &c., to be carried out under the patronage of architects. Mr. Shuffrey had been helping architects in interior decoration for the past fifty years, and had done much for interior architecture. He became a member of the Incorporated Institute of British Decorators in 1899, the year of its institution, under the presidency of J. D. Crace, and he had been in turn a member of council, vice-president, treasurer, and president. He had read valuable papers on "The Use of Relief Ornament," "The Position of the Decorator and His Craft," "The Treatment of Woodwork in Decoration," and "Chateaux of the Loire Valley." He also designed the Crace illuminated address. One of his most distinguished achievements was a book which was probably to be found in the library of every architect, "The English Fireplace and its Accessories," published by Batsford. Mr. Shuffrey designed and executed the plaster ceiling in the entrance of the dining hall of the Painters' Company, and had also designed and executed war memorials for Witney Grammar School, Bloxham School, Oxon, and Walpole Park, Ealing. Sir Banister recalled that only three Gold Medals had been previously awarded—to Sir William Richmond, R.A., J. D. Crace, and Metford Warner (of Jeffery & Co.). Investing Mr. Shuffrey with the Medal amid loud applause, Sir Banister said the recipient had devoted his life to the service of his art. The Gold Medal of the Institute was the highest honour they could bestow upon him. It gave him (the speaker) the utmost personal pleasure to be the agent of the presentation.

Mr. Shuffrey, in replying, dwelt upon some of the interesting events of his career, recalling, incidentally, that one of his associates in his early days at the A.A. was Sir Aston Webb.

A vote of thanks to Sir Banister was proposed by Mr. Octavius Satchell, and seconded by Mr. Stewart Green. Sir Banister, replying, mentioned the interest that the Painters' Company (in whose historic hall, by Wren, it was their privilege then to be) had taken in the Trades' Training School, which was one of his own interests in life as it had been his father's before him.

Light refreshments were then taken, after which the company proceeded to the upper hall, where an interesting exhibition of Decorative Art is now being held. One of the attractions of a very pleasant evening was an excellent programme of music rendered by a string quartet.

A Græco-Roman Theatre Find in Transjordan.

In the excavations of the Græco-Roman theatre at Jerash, the classical Geraza or Decapolis, beyond the Jordan, Mr. Horsfield, the architect and former student of the British School of Archaeology at Jerusalem, who is now charged with the conservation of historic monuments, has made an important find. While the foundations of the proscenium of the theatre were being tested, the podium at the back of the stage was disclosed, apparently intact all across, with its fourteen monolithic columns, the lower order standing complete in position, which is rarely seen; also traces of the upper order and statues and inscriptions and three stage doors; also the vaulted main entrances from both wings to the stage and the orchestra. The whole is said to constitute one of the most complete classical theatres.

LEGAL SECTION.

NOTES ON CURRENT CASES

Covenants Against Assigning or Parting with Premises.

OUR readers will have noticed the number of decisions recently delivered by the Courts on the effect of covenants in leases not to assign, underlet or part with the possession of premises or parts of premises the subject of the lease, which we have had occasion to note recently. The latest decision on this point is *Abrahams v. Mac Fisheries, Ltd.* (1925, 2 K.B. 18), the current number of the Law Reports, but the facts are somewhat complicated. By an indenture of lease dated January 1, 1924, two shops with flats and tenements above them, 34 and 35, Thayer-street, were demised by the plaintiff's predecessor in title to the defendants for the term of 14 years from March 25, 1924. Possession of No. 34 was given about March 25, but of No. 35 not until June.

The lease contained a covenant by the lessees that they would not assign, transfer, underlet, or part with the possession of the premises or any part thereof, other than an under-letting of the upper part for residential purposes only, without the previous consent in writing of the lessors, which consent should not be unreasonably, arbitrarily, or vexatiously withheld, and there was a provision in the lease for re-entry on the premises or any part thereof in the event of breach of covenant. The upper part of the premises were in the occupation of tenants who were under the Rent Restriction Acts.

The facts are voluminous, and are also contained in considerable correspondence, but perhaps it will suffice to enable the points of law decided to be understood if they are very briefly stated. The defendants, the lessees under the above lease, were desirous of sub-letting the shop No. 35, and early in June, 1924, through their agents, entered into negotiation with the managing director of a firm of wine merchants, who, on June 12, made the following offer: "I hereby make you a firm offer to take the above premises on a full repairing lease for 14 years or as near that period as possible, and to pay the rent of £225 per annum exclusive" (this meaning exclusive of rates and taxes) "for the first three years; thereafter the rent to be £250 per annum exclusive, provided certain repairs are carried out, or alternatively I am allowed two quarters' rent in lieu of same." Subsequently the solicitors for the wine merchants wrote enclosing a cheque for rent or deposit, saying it was understood that possession of the premises was to be given in order that certain repairs should be undertaken, and asking for the key. To this the defendants' agents replied, pointing out that no repairs could be put in hand until a schedule of the same had been submitted to their superior landlord and stating that the key had been handed over, but asking for its return in a few days. Subsequently, having seen a schedule of repairs, they, however, wrote that they did not consider that the nature of the works would necessitate a reference to the superior landlord, and authorising the work being commenced, on the understanding, however, that any works done prior to the agreeing of the draft lease, and to the defendants receiving the licence to sublet from their superior landlord, were to be carried out at the responsibility of the sub-lessees, and that if any hitch occurred it must be understood "possession" should be surrendered to the defendants immediately. On June 23 the defendants informed their agents that the landlord had refused consent to the sub-letting of the premises, but they had placed the matter in the hands of their solicitors. On June 26 the defendants' agents sent the draft lease to the sub-lessees, stating it was submitted subject to all necessary consents. On June 27 the sub-lessees' solicitors wrote to the defendants' solicitors, pointing out that a considerable sum had been then expended in alterations. On

June 30 the defendants' solicitors wrote to the sub-lessees' solicitors stating that they had no doubt that sufficient particulars and references could be furnished to render any withholding of licence unreasonable, and they noted these were being obtained. On the same date the draft lease was returned approved by the sub-lessees, and the report states that the sub-lessees "were then apparently installed in the premises, and carrying out there the business of a wine merchant." On July 21 the defendants' solicitors sent the counterpart lease for execution, but at the same time pointed out it could not be proceeded with until the superior landlord's licence was forthcoming. By August 2 apparently something had been said as to the sub-lessees vacating the premises, for the solicitors of the sub-lessees wrote they could not see that the defendants had any right to call upon their clients to vacate. On August 6 the defendants' solicitors wrote that, failing their sub-lessees producing acceptable references, the proposed sub-letting would, of course, fall through, and the sub-lessees would have to vacate the premises if in fact they had taken possession of them. On September 17 the defendants' solicitors informed the sub-lessees' solicitors that they had been notified that unless the matter was put upon a proper footing the superior landlord would institute proceedings for forfeiture of the lease owing to the sub-lessees being in occupation without consent. It is sufficient to say that the sub-lessees' solicitors intimated that they would resist any attempt to take forcible possession.

The plaintiff, the superior landlord, instituted proceedings on September 23 to recover possession of the premises from the defendants for breach of covenant. It was alleged that the defendants had assigned or underlet or parted with the possession of the premises or part thereof without previous consent in writing, and in the particulars it was stated that the business of a wine and spirit merchant was carried on upon the premises from about the month of July until September by some person other than the defendants, and that over the door appeared the name of the wine merchants. The defendants alleged that they had neither assigned nor underlet nor parted with possession, and in the alternative pleaded that if they had they would rely upon Section 14 of the Conveyancing Act, 1881, as to absence of notice before action brought. The first part of the defence, that there had been no under-letting or parting with the possession, was based upon the cases *Peebles v. Crosthwaite* (13 T.L.R. 37, 198), and *Jackson v. Simons* (1923, 1 Ch. 373; *The Builder*, July 27, 1923), that no estate or interest had been conferred upon the sub-lessees, but they were on the premises merely by licence from the defendants.

On this point the Court, on the facts, held that the defendants had parted with possession of part of the premises. The handing over of the keys, as the Court intimated, would not in itself be necessarily conclusive evidence, but here the sub-lessees were in occupation of the shop for a considerable period, were carrying on their business there with their name over the door, and refused to go out; the defendants had not, in fact, cashed the cheque received, but they allowed substantial repairs to be carried out by the sub-lessees, and they appeared, as the Court found, to be satisfied, that they had got everything they wanted, only stipulating that, if there should be any hitch, then the sub-lessees should give up "possession," a word the Court laid stress on, coupled with the money spent on repairs and the installation of the business.

The second defence as to the Conveyancing Act had still to be considered, and this is the point of interest in the case, as the Court said

it raised a question of considerable difficulty. Section 14, subsection (1) of the Conveyancing Act, 1881, provides that a right of entry for forfeiture under any proviso or stipulation in a lease for a breach of covenant or condition in the lease shall not be enforceable until notice of the breach has been served on the lessee, and if the breach is capable of remedy requiring the lessee to remedy the breach, and in any case requiring the lessee to make compensation in money. Subsection (6), however, provides: "This section does not extend (1) to a covenant or condition against the assigning under-letting or parting with the possession or disposing of the land leased . . ." The second point, therefore, was this: It was contended by the defendants that even if they had parted with the possession of part of the premises, that has been held not to be a breach of the covenant not to assign or part with the possession of the premises, and, therefore, the provision contained in subsection (1) had no application, and notice was necessary.

As to the distinction between covenants not to part with the possession of premises as a whole and a parting with a part of the premises we may refer our readers to our note on *Terrell v. Chatterton*, in the House of Lords (*The Builder*, December 28, 1923).

As to the point now raised, whether subsection (6) applies where possession of a part only has been given without consent in breach of covenant, this was raised in the case *Russell v. Beecham* (1924, 1 K.B. 525; *The Builder*, June 27, 1924), where Lord Justice Scrutton decided that a parting with part of the premises did not come within subsection (6), and therefore notice must be given, but the majority of the Court of Appeal decided that case on another ground, and therefore his judgment is not that of the Court of Appeal as a whole.

The learned Judge therefore intimated that there was no actual decision binding upon him on the point, and came to the conclusion that the apparent intention of the Legislature and the history of the law of relief indicated that the language of subsection (6) should be construed in the wider sense to include a covenant against parting with the possession of a part of the premises. The Court also observed that numerous decisions had been brought to its notice in which this same point could have been raised, and had never been taken.

We may note that in *Terrell v. Chatterton* the covenant only applied to parting with possession of the premises as a whole, and Lord Wrenbury pointed out that the remedy was simple, for to make the covenant effective it was only necessary to add the words "or any part thereof." The remedy, however, would not be simple if the distinction followed that Section 14, subsection (1) of the Conveyancing Act did not apply where the whole premises were dealt with, but did apply where the breach of covenant only affected a part, and that notice of breach before action must be given in the latter case, but not in the former. The learned Judge, in the case we are considering, pointed out that the reason why the Legislature had excepted covenants against assigning, under-letting, or parting with the possession of premises from the operation of subsection (1) was plainly because breach of these covenants cannot be remedied specifically, and that logically this must apply equally, whether the whole or part of the premises were dealt with in breach of covenant. In our note to *Terrell v. Chatterton* we observed that a parting with a portion of the premises might well have more objectionable features in it than a parting with the whole, and in these days when large houses are a drug in the market and conversion is often resorted to, it is certainly far more likely that a breach may relate to part of the premises than to the whole.

The case being complicated in its nature has had to be dealt with at some length in this note, but the result may be summarised briefly, that where there has been a breach of covenant in

starting with possession or under-letting a part of the premises demised, notice of the breach is not required under subsection (6) before a right of re-entry or forfeiture is enforced by action or otherwise.

In our Legal Section last month we noted the case *re Gibbs v. Houlder Bros.*, and discussed the grounds upon which refusals to assignments could be based. The user of the premises was one of those grounds, and the fact that intoxicating liquors were to be sold on the premises would appear to furnish reasonable grounds for a refusal in such cases.

LAW REPORTS.

Architects' Action for Libel.

In the King's Bench Division (before the Lord Chief Justice), *Morgan & Cowles-Voysey v. Southern Publishing Co., Ltd., and Glover.*

The plaintiffs (Messrs. Charles Cowles-Voysey and Hugh Townhend Morgan, A.A.R.I.B.A.), joint architects, of 14, Gray's Inn-square, W.C., brought the action to recover from the Southern Publishing Co., Ltd., of Castle-road, Hastings, and Mr. Jas. W. Glover, of 19, Sackville-street, London, W., damages for an alleged libel, which appeared in the *Evening Argus*, a newspaper owned by the first defendants, on October 18 st year.

Sir H. J. Slesser, K.C., said that the plaintiffs were architects of considerable experience and professional reputation, and they were engaged in connection with the erection of a music pavilion at Hastings, for the County Borough, and were at pains to take expert opinion on acoustics, heating, and ventilation. In October, 1924, plans had been prepared, but no buildings had been begun. Mr. Glover, who was a music conductor, wrote a letter to the *Evening Argus*, which was published in that newspaper on October 18, in which he said:—

"As the inventor of the suggestion that the new borough surveyor might be consulted before another penny is wasted on Alderman Fox's preposterous, extravagant, and never-to-day pavilion scheme, I should like to say a little more. When the building starts, it is the new surveyor who will be asked for guidance and to assess and advise payment of all the accounts. He is the referee of all our finance; he is the person to whom we can look for any possible sort of redress. The pavilion has been rightly or wrongly designed by two clever young men, who, with the knowledge that it was a concert pavilion where people had to hear music in the first instance, forgot that it was necessary for anyone to hear in it; they only called in an acoustic expert when a strong protest was made by me. What turns up now is that, having accepted plans where, whether through carelessness or ignorance, no provision had been made for 1,500 people to hear whatever went on therein, we actually have it admitted that, to save 1,500 people from being frozen to death in the winter and stifled to death in the summer, another £1,000 is wanted for heating and ventilation. An attempt being made, as Councillor Morgan stated, to 'hustle' this through for £1,000, it was shown that only £650 would be required, so that another £350 was to go over the top as bluff. Were not these three points—(a) acoustics, (b) ventilation, and (c) heating—considered by the celebrated professors who advised us to have this design?"

Sir H. J. Slesser said that the defendants had said that they could not sustain these allegations, because all necessary precautions were taken by the plaintiffs. The defendants had agreed to express, without reservation, their sincere regret for having published of the plaintiffs the words complained of. They agreed that the aspersions cast on the plaintiffs had no foundation in fact and should never have been made; that no ground of complaint had ever existed against the plaintiffs with regard to their professional skill, or to the care and attention which they had given to the work on which they had been

engaged for the Hastings Town Council; or that the plaintiffs in any way fell short of their duty with regard to the acoustics of the music pavilion, or with regard to the heating or ventilation of the building, or that they were in any way subjected to pressure with regard to these matters. The plaintiffs accepted the apology, and as far as they were concerned the matter was at an end.

Mr. Doughty, K.C., for the defendants, stated that, as soon as they investigated the matter, they realised that the contents of the letter could not be justified, and they made an ample and full apology.

The apology was as follows:—

"We desire without reservation whatsoever to express our sincere regret at having published of the plaintiffs the words contained in the letter herein complained of, which appeared in the issue of the *Evening Argus* for October 18, 1924. The aspersions thereby cast upon the plaintiffs had no foundation in fact, and we fully recognise that they should never have been made. There has never existed any ground of complaint against the plaintiffs or either of them, either with regard to their professional skill or with regard to the care and attention which has been given by them to the work upon which they are engaged for the Hastings Town Council, or in any way whatsoever, and we ought never to have been a party to any suggestion to the contrary effect and desire to withdraw wholly from it. It is quite untrue that the plaintiffs in any way fell short of their duty with regard to the acoustics of the music pavilion or with regard to the heating or ventilation of the building or that they were in any way subjected to pressure with regard thereto. We now, as the result of investigation, know, and are glad frankly to admit, that in every respect the reverse was the case, and the plaintiffs, of their own accord and animated by the highest regard for the interests of the Borough, not only amply fulfilled their professional duty, but, at their own expense and upon their own initiative, went far beyond what could in any way have been required of them, and obtained expert advice upon these matters which will be of the greatest benefit to the public. We are satisfied that this apology ought to be as ample and as full as we can make it in every respect, and we can only hope that the plaintiffs will accept it in that spirit and that neither any professional injury to them nor any tone of bitterness in their relations with Hastings will remain hereafter."

By consent, the record was withdrawn.

Depositing Soil on the Highway.

A novel charge of interest to the building trade was heard at Blackwood (South Wales), this week, when Harold Layman (39), a builder, of Ynysyddu, was summoned on the unusual charge of laying soil on the highway to the injury of the highway. Mr. Trevor Griffiths (Clerk to the Council) prosecuted, and Mr. Harold Lloyd (Cardiff) defended. Mr. Griffiths said that defendant started building developments in the district at a spot where a large quantity of loose soil had to be excavated. He conceived the idea that the most economical way to dispose of it was to take it a few yards away and deposit it on the road, and although he was called upon to desist the request was unheeded.

Defendant, giving evidence, said that, first of all, he deposited the material at the junction of two roads, thinking the ground was that of the Tredegar estate. When this was stopped by the surveyor, that official told him to fill in the ruts in the road with it, and then to tip on the road itself and make the level up. He did this for three weeks, and then a meeting of the Council was held on the site and he was stopped. He had done the road a lot of good by putting this stone, not dirt as alleged, upon it. If necessary, he could remove it for £15.

The bench fined defendant £2 with £10 10s. costs, and £30 damages, the Clerk remarking that if defendant removed the stuff, he would save the £30, but that that was a matter for their own arrangement.

CHANCERY DIVISION.

(Mr. Justice Tomlin.)

Ancient Lights Action.

HARTMAN v. AUSTIN REED, LTD.

In this case Mr. Fredk. Henry Hartman and his wife, Beatrice Eliza Hartman, who carry on business as Andrews & Co. at 11, Red Lion-square, W.C., brought the action for an injunction to restrain the defendants, Austin Reed, Ltd., from erecting, or allowing to remain erected, upon the rear part of 11, Red Lion-square any buildings so as to darken, injure or obstruct the plaintiffs' ancient lights and to deprive them of access to the rear of their premises through a yard and door opening into the Yorkshire Grey-yard and thenceforth communicating with Eagle-street.

Mr. Gavin Simonds, K.C., for the plaintiffs, stated that the defendants were now their landlords and also the owners of property adjoining No. 11, Red Lion-square, to the south and the east of those premises, and upon that property they had erected the buildings complained of. The obstruction of light divided itself into two heads. In the first place they were ancient lights, and in the second it was an obstruction raised by the plaintiffs' own landlords, and therefore fell within the well-known principle of derogation of grant even if they had not been ancient lights. With regard to the right of way, it was no longer available for use, as the defendants had blocked up the exit. The plaintiffs were manufacturers of roller duplicates and kindred appliances, and the right of way afforded ready access for the delivery of heavy packages to the back of their premises. It was essential for their business that their premises, which consisted of the ground floor and basement, should be adequately lighted—he did not say they required a specially high degree of light—for the examination of their wax-coated stencils and the determination of the colours of the inks used in the machines for demonstration to probable customers.

The defendants denied that their new buildings had diminished substantially, or at all, the access of light to the plaintiffs' windows, and in the alternative said that the premises had still amply sufficient light. They further claimed that they had the right under their contract to close the alleged right of way.

Mr. Percy J. Waldram, of John Waldram & Sons, civil engineers and surveyors, of Dean-street, W.C., and Buckingham Gate, S.W., who has made a special study of daylight illumination, stated that, with the exception of small portions close to the windows, the plaintiffs' premises would, by reason of the defendants' new buildings, be wholly inadequately lighted even on a bright midsummer day. He would regard it as wholly unreasonable to expect any employee to do clerical work there without artificial light. The brightness reflected from a glazed brick wall as compared with the brightness of the sky was very low.

Mr. Chas. Wm. Willoughby, of Wetherall & Green, auctioneers and surveyors, of Chancery-lane, E.C., gave similar evidence.

Mr. Hartman, the plaintiff, said that unless the obstruction to his light was removed it would be necessary for him to get premises elsewhere. He had tried to find another place.

Cross-examined: It was ridiculous to suggest that the premises were as reasonably fitted for the purpose of his business as when he took them.

Witnesses were then called for the purpose of proving the uses for many years of the alleged right of way and the necessity of using artificial light under the present conditions in the plaintiffs' premises or working close up to the windows in midsummer time, whereas before defendants' buildings were erected there was ample daylight in almost every part of the rooms for the purposes of the business.

At the close of the plaintiffs' case Mr. Westwood, of J. P. Westwood & Embleton, architects, of 7, Adam-street, Adelphi, gave evidence for the defence. He said his firm acted as architects for the defendants and prepared the plans. Negotiations between the parties having broken down, he modified the plans so as to

substantially leave the plaintiffs the light they were enjoying

His Lordship: Is it your opinion that the light to the windows owing to the glazed bricks and other alterations you have made has improved under these conditions?—Yes.

You think it is a better light than before?—I do. They are new buildings in the place of dirty old buildings. Witness said he had visited the plaintiffs' rooms after listening to Mr. Waldram's evidence and was able to read aloud perfectly easily a leaf from a time-table at the walls farthest away from the windows. He could see no difficulty whatever in clerical work being done at the tables in the centre of the rooms. There was quite a reasonable light there. It was certainly equivalent to what it was before the defendants' work was done.

On July 24, when the hearing was resumed, Mr. Simonds stated that the parties had arrived at a settlement—the defendants would pay the plaintiffs' taxed costs, which were to include the cost of the model, and £100 paid into Court by the defendants would be paid out to the plaintiffs. The proceedings would be stayed on terms which had been scheduled. Those terms provided for the payment of a further

sum, of which part would be paid within one month and the remainder on the surrender of the premises, which was to be on July 24 next year, with liberty to surrender them at an earlier date. The plaintiffs were also to be at liberty to unpack their cases in the passage in dispute.

His Lordship expressed the view that the parties had been very wise to arrive at a settlement.

KING'S BENCH DIVISION.

(Before Mr. Justice Fraser.)

Quantity Surveyors' Claim for Fees.

Booth & Dickie v. Associated Cinematograph Theatres, Ltd.

In this case the plaintiffs, Messrs. Booth & Dickie, quantity surveyors, of Chandos-street, Strand, W.C., claimed from the defendants, the Associated Cinematograph Theatres, Ltd., £375 for work done as quantity surveyors in respect of a proposed enlargement of and alteration to the Palladium Cinema, Croydon, owned by the defendant company, the amount claimed being 2½ per cent. upon the builder's estimate for the work.

The plaintiffs' case was that in 1918 the defendants desired to enlarge the Palladium so as to increase its accommodation from 900 to about 2,000. Originally plans of the proposed alterations were got out by Mr. Bertie Crewe, but nothing could be done in 1918 because the Government had prohibited the building of cinemas until houses had been built. The plan of the site handed to Mr. Crewe included offices which were not part of the cinema, the intent being to take in some part of the adjoining property. Defendants were long-leaseholders of the premises, including offices that were let off on shorter under-leases. In 1923, the Government's restriction having been removed, Mr. Crewe's first rough estimate was that the alterations would cost about £40,000, which placed the scheme out of the regions of possibility and amendments were made in the scheme which brought the cost down to about £20,000. Defendants then said they would go on if the work could be done approximately for £15,000. Mr. Crewe would not take the responsibility, saying that the work could be done for £15,000 but said that if the defendants wanted to find out whether it could be done at that price they must employ quantity surveyors, and accordingly the defendants got into touch with the plaintiffs. Mr. Dickie afterwards came to the conclusion that the work could be done for approximately £15,000, and the plans were revised, and definite instructions were given to the plaintiffs to prepare bills of quantities, the fee to be 2½ per cent. on the cost of the alterations if it were brought out at approximately £15,000. The plaintiffs brought out the cost at £15,450 and therefore the condition of the neighbourhood of £15,000 was fulfilled. Later, difficulties arose with regard to the possession of the site and in getting the Registrar of Births and Deaths out, and defendants determined not to proceed with the work.

Evidence having been given in support of the plaintiffs' case, Mr. Sheridan, who had conducted the negotiations on behalf of the company, gave evidence for the defence. He said that, in view of the mistake that had been made with regard to the site, it was agreed not to go on with the work of getting out the quantities, and if Mr. Dickie had already done some work he had done it on his own responsibility. No order was given to Mr. Dickie to get out the quantities at the date he had started.

Mr. Justice Fraser, at the conclusion of the arguments of counsel, in giving judgment, said there had been no mistake and that he thought Mr. Sheridan's memory was at fault and there would be judgment for the plaintiffs for £375 with costs.

£25 having been paid into Court by the defendants, that sum was ordered to be paid out to the plaintiffs in part satisfaction.

Regent-street Rents.

In reply to a question in Parliament, Mr. Wood (Minister of Agriculture), has stated that the original leases reserved rents of Regent-street amounted in the aggregate to £26,383 9s. 7d., and it was estimated that on completion of the re-building the rents would amount to £450,000 per annum.

Cardiff Technical College: Department of Architecture and Civic Design.

The following awards have been made as a result of the Sessional Examinations at the School of Architecture at the Technical College, Cardiff. Professor A. C. Dickie, M.A., F.S.A., A.R.I.B.A., was the External Examiner.

FOURTH EXAMINATION.—F. Harper, V. Banks, H. Barton, J. Wride.

THIRD EXAMINATION (for the Certificate awarded at the end of the three years' full-time day course, exempting from the R.I.B.A. Intermediate Examination).—H. Bull.

SECOND EXAMINATION.—P. G. Budgen, J. T. Banks.

FIRST EXAMINATION.—C. J. Bartlett, F. W. Honeywell, A. E. Jewell, Miss O. E. Price, I. F. B. Richards, C. L. Bugler, J. Lewis, Llewellyn ap Gwynn.

One of two oak Memorial Tablets in the Church of St. Thomas, Stourbridge.
Designed by Mr. A. TROYTE GRIFFITH.

THE BUILDING TRADE

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—XIII

At the conclusion of the last article we expressed our intention of referring to some of the latest decisions on light, and also a few of the cases that have not fallen within the findings of the text of previous articles.

Access of Light: Buildings and Apertures.

It will have been seen from some of the cases which we have cited in the course of these articles that the easement of light has been claimed in respect of skylights, but this has also affirmatively held in the case *Harris v. Kinloch & Co.* (1895, *Weekly Notes*, 60), the headnote of which case is, there is no difference as to the easement of light between skylights and other windows; but in the comparatively recent case, *Levet v. Gas Light & Coke Co.* (18, *Weekly Notes*, 381; *The Builder*, December 6, 1918) it was held that a claim of light could not be maintained in regard to windows which were frequently left open, and one to admit light to a work bench and the other to admit light and air to a shop. In this case the Court said that so far as the reported cases went this was the first instance where it had been contended that a prescriptive right to light could be claimed where an owner opens an ordinary door whenever he passes and by this means lights the space behind the door, and the Court held that section 3 of the Prescription Act applies only to windows or apertures in the nature of windows, not to apertures with doors in them which are primarily constructed for the purpose of being closed. It is not stated whether the windows in question were glazed, but as this is not mentioned it may perhaps be assumed that they were not.

One of the leading text books, *Bullers v. Benson* (1885, 29 Ch. Div. 155) and *Presland v. Bingham* (1889, 41 Ch. Div. 268) are cited as authorities that a light easement can be claimed in respect of a glazed door, but in the headnote to those cases in the *Law Reports* that does not appear to have been the chief point of the decisions. There, however, seems no reason to doubt that a claim can be made in respect of a glazed door except for the decision which we have just cited, *Levet v. Gas Light and Coke Co.*, which was decided since the last edition of the work referred to.

Greenhouses are "buildings" within section 3 of the Prescription Act, and prescriptive right may be acquired in respect of them. *Lord v. Holt* (1899, 1 Ch. 698; *Easton v. East*, 1903, 1 Ch. 405). But in *Harris v. De la Haye* (1886, 33 Ch. Div. 288) the meaning of the words, "dwelling house, workshop, or building" in section 3 were considered and it was held in the Court of first instance that the building must be something of a like character with a dwelling house or workshop. The structure in that case consisted of upright stakes of timber or standards fixed in stone and built on brick piers with cross beams and diagonal iron braces divided into floors or bays with open unglazed ends or apertures between the uprights, and was used for storing and seasoning timber, and it was held by the Court of Appeal, without deciding the point as to the structure being a "building," under section 3 it must be shown that the interrupted access of light reached the building by one and the same definite channel for the statutory period. It was further held that the nature of the structure and the mode of carrying on business the timber might be so as to block up some of the apertures from time to time and uninterrupted access could also not be proved.

In this latter point this case may be compared with *Presland v. Bingham* (*ubi sup*)

where the defendant relied as an interruption to a claim for light on the fact that he had been in the habit for many years of piling up packing cases to a height exceeding that of the wall complained of as an obstruction to the light, but there was evidence that the packing cases were removed from time to time, and it was held that there had been no "interruption" within section 4 of the Prescription Act, and that where interruption is in its nature fluctuating and temporary, the onus of proving that in fact it continued and was acquiesced in is laid upon the defendant, whereas where the obstruction is of a permanent character then the onus is on the plaintiff to prove that it did not continue with his acquiescence for a year.

Contracts of Sale, and Light.

We may note two cases decided since the latest editions of the Text Books on light, which relate to contracts for the sale of property and the right conferred as to light.

In *Smith v. Colbourne* (1914, 2 Ch. 538) the Court of Appeal decided the following points. A contract to sell buildings described by a plan which shows windows does not imply any warranty of a legal right to the access of light to these windows; further, the existence of an agreement which prevents the statutory period of prescription from beginning to run does not create an encumbrance on the property, and the non-disclosure of such an agreement does not invalidate the contract of sale. A clause in such an agreement that the owner of the buildings will block up the windows is an affirmative covenant only and cannot be enforced against subsequent purchasers. A further clause in such an agreement that the adjoining owner may enter and build up the windows, in default of the owners of the buildings doing so, is a mere revocable licence and does not give the adjoining owner any interest in the land, and if it did give such an interest it would be void for perpetuity. None of the points mentioned above make a title too doubtful to be forced upon a purchaser.

But the case *Pemsel and Wilson v. Tucker* (1907, 2 Ch. 191) should be compared with the above so far as enforcing the contract is concerned, as there in an open contract for the purchase of two houses it had definitely been made "subject to right of light with owner of adjoining property being guaranteed," but, on investigation of title, it appeared that the vendor was not in a position to guarantee the light. The houses had been built in 1892 by the vendor and possessed no ancient lights. The adjoining house had also been built by the vendor and sold by him to a purchaser in 1897 under an agreement that neither the vendor nor that purchaser should do anything to prejudice each other's light. This being a mere personal agreement with the vendor (see *Smith v. Colbourne* above) he was not in a position to guarantee the light, for instance, if the purchaser who had bought the other house sold it without notice of the agreement his purchaser would be at liberty to obscure the light to the houses now being sold under this guarantee, and it was held that the guarantee in such circumstances constituted a defect in the title and the contract of sale could not be enforced.

To pursue this further would lead us outside the scope of the present articles, which we have limited to Statutory Prescription, and involve the consideration of grants, a distinct and difficult branch of the subject. At present in these last two articles we are confining ourselves to noting some of the cases reported since the latest editions of the Text Books.

Measure of Damages: Site Value.

Two recent decisions require noting under this heading as they appear rather to extend the principle as to damages. In the first, *Griffith v. Richard Clay & Sons, Limited* (1912, 2 Ch. 291; *The Builder*, May 24, 1912) the plaintiff was the owner of two houses fronting Brunswick-street, Blackfriars, having windows, ancient lights. The defendants, by erecting new buildings on the opposite side of the street, had obstructed the light to these windows, and had paid £150 into Court by way of damages. The plaintiffs had waived their claim to an injunction, and the only issue was the amount of damages. The plaintiffs owned a piece of land immediately at the rear of and adjoining these two houses on which was a warehouse separately rated, and having no windows looking towards the defendants' buildings. All the buildings were old and dilapidated, but the district, though no longer residential, was adapted for workshops and factories. The area of land covered by the two houses was 1,000 square feet, the surface of the land behind being 1,050 square feet. The court held that in considering the damage to the plaintiffs by the diminution in the value of the premises caused by the obstruction to the ancient lights the fact must be taken into consideration that the plaintiffs were the owners of the whole 2,050 square feet as a building site, and the damages were assessed at £200. This decision was affirmed by the Court of Appeal without calling for argument by the respondent's counsel.

This case was followed in the more recent case, *Wills v. May* (1923, 1 Ch. 317; *The Builder*, November 30, 1923). The facts are rather complicated, and need not be stated at length. The plaintiff owned adjoining houses, 117 and 119, Church-street, Croydon, and the defendant's house was to the north of 117 a passage running between that and the two houses on which some of the windows in the plaintiff's house, 117, looked. The defendant had developed the site on which his house stood, and erected thereon a shop and offices which obstructed some of the plaintiff's lights, and a mandatory injunction was claimed. The court found that the injury could be compensated by damages, and assessed the damage as regards the obstruction to light to 117 at £50, a sum at which the rooms affected could be rendered as comfortable as they were before, but, in addition to this, it had been contended that the site of the two houses for the purposes of damages must be treated as one, and the following facts were put in evidence. The plaintiff had purchased the two houses by auction in February, 1921. The character of the neighbourhood was changing from a residential to a commercial district, and the site upon which the plaintiff's houses stood was adapted for the erection of a shop of much the same height and character as that erected by the defendant, and at the auction the sites had been offered as one lot as affording sites for a factory or other commercial premises. The two sites formed a compact site suitable for the erection of a factory or warehouse, but it was impossible so to develop them for about 14 years as No. 119 was subject to a lease, unless a surrender could be arranged. It was also proved that the obstruction to the light made the sites less valuable for the erection of a factory or other buildings.

The court, following *Griffith v. R. Clay*, assessed the damages for the combined sites at £100. That was to be taken as £50 in respect of each site in addition to the £50 above mentioned in respect of the structural alterations at No. 117. The Court pointed out a distinction between this case and *Griffith v. R. Clay*. In the latter case the houses were old and dilapidated and would have had to be demolished almost immediately, whilst in this case the houses were in a condition to last some years, and in the case of 119 develop-

ment must be delayed for 14 years unless the lease could be got rid of.

It may be pointed out in regard to the remoteness of damage in this case that in Griffith's case the Court of Appeal had observed that if an injunction had been granted it would have protected the whole site in that case, and this appears the key to both decisions.

PRIME COST AND PROVISIONAL SUMS—III

PRIME cost, or p.c. sums, and provisional sums in a building contract are in all respects similar. If there is a difference it is that the term p.c. is generally applied to small sums. Both are the subject of additions to or deductions from the contract sum, according to whether the work contemplated under these sums is wholly or partially executed or omitted, or whether the prices actually paid for the work so performed exceed or are less than the sums or items included in the contract under these terms. Provisional sums are generally few in number, and are usually kept under a separate heading in the specification and bill of quantities; whereas prime cost sums are spread all over the various trades as required, both in the specification and bill of quantities.

In all cases the contract should contain clauses defining the object of these items, and clearly stating what they are, whether, e.g., they are the net sums to be paid or payable, and whether with or without any allowances to the contributor for profit. Also how they are to be dealt with in the final adjustment and settlement of account. Where such clauses exist the contract must be referred to.

Clauses 27 and 28 of the R.I.B.A. Form of Contract (1909) particularly refer to these items, giving their meanings, and how they are to be dealt with under the contract when this form is used.

In tendering, as a general rule, the contractor adds a percentage for profit upon all p.c. item and provisional sums. The amount of the profit to which he eventually becomes entitled depends upon whether the work is wholly or partly executed; just in the same way as his profit upon the work in the ordinary contract, containing powers of omission and addition, depends upon the extent to which the contract work is omitted or varied under those powers. Where no special terms are provided in the contract, then it would seem that if there is no expenditure required in connection with these prime cost items and provisional sums, such items and sums together with anything added thereto for profit, carriage and fixing, can be deducted in full. But if there are special circumstances and the provisional sum is inserted in the contract for a specific work such work cannot be omitted and given to another contractor, for then the employer may be liable for damage and loss of profit to the general contractor.

The contractor is, it appears, not entitled to recover what the cost is to an ordinary person, i.e., the cost out of which he has had the benefit of trade discounts as well as discounts for cash (see *Hippisley v. Knee Bros.* (1905) 1 K.B. 1.). The employer is under no other obligation than to pay the prime cost, though in very special circumstances he may not be able to recover the amount received by the contractor in respect of discount for cash; for the contractor is under no obligation to pay cash, and if he does so he cannot charge the employer more than he has in fact paid.

If under the contract the contractor added profit, carriage, and fixing to the amount named for prime cost items or provisional sums, and the ultimate expenditure under these heads is far less than originally contemplated, although the items used involved the same cost of carriage and labour in fixing had the original expenditure been made on the items, etc., purchased, it appears clear that whereas the contractor is only entitled to a proportion of the

profit at *pro rata* rates, he nevertheless is entitled to the full original carriage and fixing.

If no profit is provided the contractor is in most cases able to produce his prime cost book in support of the expenditure; and this, with a reasonable percentage for profit added thereto, will usually satisfy all parties. In this case also he is entitled to a reasonable remuneration for the labour of fixing together with the actual amount paid for carriage.

When there is a deduction made of a certain percentage from the total amount of the schedule of prices to arrive at the amount of the tender, all the rates in the schedule of prices are subjected to a deduction of that percentage both on "extras" and "omissions." Similarly when there is a percentage added, the rates in the schedule of prices are subjected to an addition of that percentage in the case of "omissions" and "extras." Much depends on whether the schedule of prices form part of the contract. These percentages, on or off the rates in the schedule of prices, do not apply to prime cost items or provisional sums. They are excluded in all cases.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Waterproofing Sand-faced Brickwork.

SIR,—What is the best preparation for silicating or waterproofing sand-faced brickwork, to prevent water driving through? We want something which will not alter the colour of the brickwork, nor show that anything has been applied.

W. J. RENDELL.

Rights of Light.

[REPLY TO "CROWN GLASS," JULY 17.]

SIR,—An easement of light is not attached to the window, skylight, or aperture, but to the building. The nature of the aperture may be of some importance, but the right to light does not consist in a right to the stream of light to the aperture, but to a right to prevent the diminution of light within the building.

There is no definite rule as to the amount of light the dominant owner is entitled to. There used to be a rule known as the "Forty-five degrees rule"; and although it may still be used as a sort of test in the absence of any other mode of arriving at a conclusion, there is no rule of law, or of evidence, and certainly no presumption, that where the angle is less than forty-five degrees the access of light is substantially interfered with.

In *Colls v. Home and Colonial Stores, Ltd.* (1904, A.C. 179), Lord Halsbury, L.C., said the test was, whether the obstruction complained of was a nuisance, and that what might be called the uncertainty of the test might also be described as its elasticity.

In *Semon & Co. v. Bradford Corporation* (1922, 2 Ch. 737) it was stated that certain conclusions had been reached in order to ascertain the quantitative value of the light in a room under varying conditions of obstruction, the light being measured at a height of three feet above the floor. That cill light is the light available at the outside cill of the window from an unobstructed horizon; that the daylight factor, a constant for any particular part of a room, is the percentage which reaches that part, that for a schoolroom one per cent. is adequate lighting, and when clerical work is done, 0.4 per cent. is satisfactory. In the case above referred to 0.8 was considered an illumination adequate for the plaintiff's business, which was that of woollen merchants.

In general the dominant owner in order to succeed in a Right of Light case, must show that light has been taken away, and that what

is left is not sufficient for the ordinary notion of mankind.

Applying the above to his projected so-called "Crown Glass" will no doubt safeguard him against any liability.

SIR,—Right of light is not bound by law, any hyperbolic rules as to distances and beyond a certain dependence upon precedent. Lights that have been established for a number of years are entitled to suffer no deduction in light by the erection of new adjacent buildings, or to damages in default, and ruling as to whether or not the new building so offended is in the hands of the court. Lights are rarely judged to suffer by adjacent buildings, except in exceptional cases of special damage can be proved. The only I can think of where this has occurred is that a diamond merchant in London, where a lighted room was used for examining jewels under a microscope, and the light was of great value. This case was not carried to court, but advice on both sides was such an angle of light of 45 per cent. from the glass line of the top light was respected. In a case quoted by your correspondent, the light could not be considered of the same value, only such angle of light as to give "reasonable illumination" in the pantry would be up in law, and the extent could only be agreed on the site. A better idea of the facts of the case could be obtained if your correspondent would furnish a sketch plan, showing heights as well as distances.

Veneers.

[REPLY TO MR. J. EVETTS.]

SIR,—Any timber merchant in a large business would furnish your correspondent with sample veneers, and the actual material is a far better guide than any coloured plate. A good workman might be sent to see the material in greater areas and bring away a still better idea of the grain than by viewing a small sample, and results are often better and more where the memory guides, than where a sample pattern is held before the eye.

Coloured plates of marbles will be found in the Architects' Standard Catalogues, which may be of service; but here, again, a view of broad surfaces of the actual material is far better. The still better way is to eliminate altogether the rather immoral practices of graining and marbling, for in the modern vernacular we have many simple ways of expressing good work, where expensive materials cannot be included, without imitating them.

REALIST

Tiling Phenomena.

SIR,—In this district I have known a steep pitched roof covered with Bridgewater tiles that has failed after a year's wear, while near a roof of well under 40 deg. pitch has stood well for several years though covered by similar tiles. Can any of your correspondents throw light upon these phenomena? JERSEY

Hot Water System.

SIR,—It is proposed to install a hot-water system in a small country house, which has relied upon a well for its water supply, and I should be glad if some of your readers could give some information on the following points: (1) What size storage tank, for all purposes, should be used? the hot-water is to be provided by an independent boiler and supplied to a lavatory basin, and sink. (2) Could the storage tank be used as the cold water tank for the system, or would another have to be provided, and if the latter, what head is necessary between the two? (3) At what distance from the pump (a semi-rotary), which is to be in the house, should the well be sunk, and what size suction and delivery pipe to storage tank should be used? "SEEKER."

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

IN the House of Lords, the Bishop of Southwark called attention to the continued shortage of housing accommodation for the working classes, and to the impossibility of meeting the deficiency unless there was a large increase in the labour available for house building. The real difficulty, he said, was not one of material or of money, but of labour. Work was being hindered through the shortage of labour, and apparently there was very small prospect of any large increase in the number of skilled craftsmen available.

The BISHOP OF MANCHESTER contended that future progress depended really on raising the status of the building industry, and in trying to get into it a better class of men, especially in the bricklayers' and plasterers' departments, and also in the development of the apprenticeship scheme.

VISCOUNT GAGE, responding for the Government, said they intended to continue to base their housing policy on the Acts of 1923 and 1924. The full effects of those Acts had not yet been properly felt. Up to the present they were working fairly satisfactorily. Under the three principal Acts 307,689 houses had been built, and there were under construction 3,023 houses. In addition, there were a number of houses of a working-class character which had been erected privately without State assistance, in regard to which statistics were not yet complete. He was, however, safe in saying that since the war over 500,000 houses had been built. Schemes for dealing with slum areas were in process of completion throughout the country, sixteen of them in London. For the last twelve months to March 31—a record year for housing—136,889 houses were completed, about half with State assistance and half without, and of that total 117,817 were classed as working-class houses. New houses were being completed at the rate of 7,000 a month. There was no reason to suppose that the supply of materials would be interrupted, and the Government were convinced that by using new methods they could give satisfactory accommodation. Special financial arrangements had been made for the erection of four different new types of houses in different parts of the country. Later in the debate Lord Salisbury announced that the Government had no desire to repeal the Act of 1924.

School Buildings.

During the debate on the Education Estimates, Lord E. Percy, President of the Board of Education, said that he had appointed a special committee to examine how best to deal with difficulties in the building industry as concerned school buildings could be met.

Building Lines.

During the passage of the Roads Improvement Bill through Committee in the House of Commons, an amendment was agreed to, including among the subjects for which grants may be made out of the Road Fund to highway authorities the prescription of building lines for the purposes of subsequent road widening. Amendments were inserted in Clause 4, which imposes restrictions as to fences at dangerous crossings, to prevent the demolition of walls forming part of an ancient monument or other object of archaeological interest. Viscount Peel announced that the Government intended to introduce a Bill dealing with building

Houses Approved.

Mr. N. Chamberlain informed Mr. Montague that since the end of November last 915 local authorities had received approval to proposals for the erection of houses under the Housing Act of 1923, and 414 under the Act of 1924. (241 local authorities received approval to schemes under both Acts.) The numbers of houses authorised were as follows:—

	Housing Acts.
	1923. 1924.
Local Authorities' Schemes ...	1,484 51,847
Private Enterprise Schemes ...	44,913 1,129
Total	46 397 52,976*

* Including 12,927 houses previously approved under the Act of 1923.

Precise figures as to houses under consideration on the first inst. were not available, but it could be said that practically all applications had been dealt with at that date. It was not a condition of the grant of subsidy that his specific approval should be obtained to the erection of houses with materials other than bricks, except in cases in which the type of construction was one for which a period of less than 60 years would be allowed for the repayment of a loan.

Houses Under Construction.

Mr. N. Chamberlain informed Lt.-Commander Kenworthy that on June 1 last the latest date for which figures were available, 43,400 houses were under construction under the Housing, etc., Act, 1923, and 16,039 under the Housing (Financial Provisions) Act, 1924.

Dwelling Houses as Factories.

Captain Garro-Jones asked the Minister of Health whether, since February 12 last, he had received representations from local authorities with regard to the use of dwelling-houses as factories and workshops; and whether he was now satisfied that it warranted some legal restriction?

Mr. N. Chamberlain said he had received representations, but he did not think that a case had been established for further restrictive legislation of this kind at present.

Westminster Hall Statues.

Mr. Day asked what had become of the statues that were removed from Westminster Hall during its rebuilding and reconstruction; and, in view of their public interest, whether they would be replaced in their original positions?

Mr. Locker-Lampson said that the statues in question were lent to the City Corporation in 1913. The First Commissioner of Works did not propose to have them replaced in Westminster Hall.

Ancient Monuments.

Sir W. de Frece asked the Under-Secretary for the Home Department, as representing the First Commissioner of Works, whether, in view of the large number of ancient and historic buildings now coming on the market for sale or removal, and seeing that there was no compulsion on the owners to report the fact to the authorities with a view to securing their preservation, he would consider the desirability of legislation to that end?

Mr. Locker-Lampson said that the First Commissioner had at present under consideration proposals for amending the Ancient Monuments Act, and he would give consideration to the hon. member's suggestion in connection with those proposals.

Replying to Mr. B. Peto, Mr. Locker-Lampson gave the following figures of expenditure on various ancient monuments:—

	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Expenditure on Ancient Monuments and Historic Buildings	£113,392	£165,659	£175,957	£137,697	£171,025	£186,950
of London—						
Expenditure	18,504	31,999	33,642	25,132	26,468	19,366
Expenditure on pointing	204	—	—	600	699	127
at Castle—						
Expenditure	700	1,057	1,056	859	600	584
Expenditure on pointing	56	140	47	—	—	—
at Castle—						
Expenditure	1,184	1,360	1,308	1,105	892	1,723
Expenditure on pointing	244	238	165	214	152	45

Price of Houses.

Mr. N. Chamberlain informed Lt.-Col. Harlick that the average prices of houses included in contracts let by local authorities during May in recent years had been as follows:—

Year.	Non-Parlour.	Parlour.
1922	£392	£422
1923	368	371
1924	404	476
1925	436	495

These prices did not include the cost of land and development.

The New Cavalry Memorial.

Lt.-Col. James asked the Under Secretary for the Home Department, as representing the First Commissioner of Works, whether the attention of the Office of Works had been called to the obstruction caused to traffic by the new cavalry memorial at Stanhope-gate; whether he was aware that the memorial itself made it impossible for drivers to see on-coming traffic; and whether the question of moving the gates a few yards to points where greater visibility could be secured would be favourably considered by the department?

Mr. Locker Lampson replied that the First Commissioner had not hitherto received any complaint on this subject, but he would have the matter investigated in conjunction with the Police authorities.

Imported Wall Paper.

Mr. Livingstone asked what was the quantity of finished wall paper imported into this country from Canada and Germany respectively for the years 1913 and 1924; and the total quantities of finished wall paper imported into this country for the same years?

Mr. A. M. Samuel said the following statement gave the information desired:—

	1913.	1924.
	Printed and Embossed Paper Hangings.	Printed and Embossed Paper Hangings.
Country whence consigned;	Cwts.	Cwts.
Total Imports from all sources	57,304	70,486
Of which consigned from—		
Canada	2	6,361
Germany	38,210	47,781

The particulars for 1913 related to imports into Great Britain and Ireland; those for 1924 related to Great Britain and Northern Ireland only. Owing to changes in the classification which became operative in 1920, the particulars for 1924 were not strictly comparable with those for 1913.

Specimen Houses.

Mr. J. Baker asked the Minister of Health how much of the money allocated for the erection of specimen houses had been spent or promised; whether applications were still being considered from local authorities who desired to take advantage of the special subsidy; in what towns the various types of houses had been erected, whether they were occupied; and what had been the total amount of subsidy paid in respect of each of the Beardmore, Weir, Atholl, Steelcon, Wild, Tilson, and any other similar type of house in which steel was used in the construction?

Mr. N. Chamberlain said that the special subsidy of £200 per house was available only for a limited number of houses of the types specially recommended for demonstration purposes by the Committee on New Methods of House Construction. So far, four types had been so recommended, namely, the Weir, Atholl, Telford, and Wild types. Of the total of £50,000 voted for the purpose of these grants, £34,000 had been provisionally allocated, made up of £10,000 for each of the Weir, Atholl, and Telford types, and £4,000 for the Wild type, but no actual payments of subsidy for these experimental houses had yet been made. Over fifty local authorities were taking part in the experiment. Four of those already had houses completed and open for inspection, and in six other districts the houses were at present under construction. If for any reason any of the selected local authorities should be unwilling to pro-

seed with the experiment, the houses would be offered to other local authorities.

British Goods.

Asked by Sir W. de Frece whether the Government would consider the loan of a percentage of space in or on all public buildings for the display, with due regard to artistic effect and under control by a small expert official committee, of poster, pictorial, and electric sign appeals to the community to promote the purchase of British goods, Mr. Locker-Lampson said that the First Commissioner would give careful consideration to the suggestion.

Clopton Bridge.

Mr. Day asked the Minister of Transport if his attention had been drawn to the dissatisfaction being expressed regarding the proposed erection of a modern ferro-concrete bridge adjoining Clopton Bridge, Stratford-on-Avon; and, in view of the plans drawn up by the conference of the Stratford Town Council and the Warwickshire County Council, which would provide for a bridge retaining the antique appearance of this historic spot, would he withdraw the order for the erection of a new bridge so as to avoid disfiguring the upstream face of the existing bridge?

Colonel Ashley said that, at the request of public bodies interested in Clopton Bridge, he convened a conference of those concerned and put forward suggestions which met with general favour for the construction of a ferro-concrete bridge adjoining the old structure—leaving the latter intact. He hoped that the project would be accepted by the responsible highway authorities to whom he had offered a substantial grant. No order had been or could be made by his department for the erection of any bridge.

The Epstein Bas-Relief.

Sir W. Davison asked the Under-Secretary of State for the Home Department, as representing the First Commissioner of Works, whether the Epstein bas-relief which had been erected in the bird sanctuary in Hyde Park was now the property of the nation, by whom was the gift made, and by whom was it accepted on behalf of the nation?

Mr. Locker-Lampson said that the bas-relief was erected by a committee formed to commemorate the work of the late Mr. W. H. Hudson. It was now the property of the nation in the sense that the First Commissioner had, with the assent of the Treasury, undertaken that his department should be responsible for its future care and maintenance.

Warwick Priory.

Sir M. Conway asked the Under-Secretary whether he was aware that Warwick Priory, a fine Elizabethan house with a later wing in the English Renaissance manner, was threatened with early demolition; and whether the Ancient Monuments Department of His Majesty's Office of Works was putting The Ancient Monuments Act, 1913, into action with a view to preventing the loss of this building?

Mr. Locker-Lampson said that the First Commissioner was aware that this building was threatened, but he very much regretted, for financial reasons, he was unable to intervene under the Act. The First Commissioner was acutely conscious of the loss which the district would suffer by the destruction of this fine old mansion. He very much hoped that a local effort would be made to save it.

Loan Repayments.

Lieut.-Colonel Horlick asked the Minister of Health what loan period was allowed for the Weir, Atholl, Wild, Telford, Nissen, Burney, and Dorman Long houses, respectively; and what distinction in this respect was made between brick houses and other forms of alternative construction that were reported to be equally durable and permanent?

Mr. N. Chamberlain said in the case of houses of the Weir, Atholl, Telford, and Nissen types he was allowing a period of 40 years. In the case of houses of the Wild type, he was allowing 60 years. In regard to the two other types referred to, the loan period had not yet been fixed.

ANOTHER HOUSING BILL?

[FROM A CORRESPONDENT.]

SOME interesting proposals are being discussed by Conservative supporters of the Government with a view to encouraging mass production of houses. During recent weeks the Unionist Housing Committee have had the opportunity of discussing the position with Lord Weir, Colonel Nissen, Commander Burney, M.P., Messrs. Braithwaite, and representatives of the Duke of Atholl. As has been well known in building quarters for some months past, the "Steel" house in its different forms has aroused no enthusiasm whatsoever among local authorities, who alone are in the position to give large orders. A number of pairs of demonstration houses are to be put up under the stimulus of £200 cash down from the Ministry of Health, but, with the exception of the Wild house, which is partly brick superimposed upon a steel frame, hardly any progress is being made.

The general tendency of local authorities—who at present are the deciding factors in regard to the type of house which they require to be built—is to prefer the brick type of house, as it is a known type, and they are not inclined to go in for new methods unless the difference in price as between the brick type and the new method is considerable. The difficulty before those controlling the new methods is that until large orders can be given it is not possible to reduce the price of the new method appreciably on what is now being paid for brick houses.

The only new methods which need be seriously considered are those which have been devised upon a basis of mass production, as it is only by mass production methods that the cost can be materially reduced; but no method of mass production is possible except upon the basis of a large output. Consequently, the possible contribution of these new methods towards the solution of the housing problem is prevented from becoming effective owing to the difficulty of obtaining a start.

Probably the cheapest and most direct method of overcoming the difficulty, so it was suggested recently in a Committee Room at the House of Commons, would be for the Minister of Health, after he has satisfied himself on the advice of his experts that any special mass production system was both practical and satisfactory, to place a block order of, say, 5,000 houses, and for the Ministry to act as a broker between the builder and the local authority. This solution, however, is not practical from the political point of view, as it would be attacked as being a species of State trading. Accordingly, therefore, some other solution must be looked for, and the Unionist Housing Committee have considered the following suggestion:—

Under the 1923 Chamberlain Act a subsidy of £75 is given to the builder, and the house so constructed may be sold. Under the Wheatley Act of 1924 the total capitalised value of the subsidy is £180 and the local authority contribution is £60, making a total subsidy of £240. But there is the proviso that houses built under the Wheatley Act may only be let, and not sold.

In both Acts, therefore, the interest to the State in obtaining a reduction of the cost of houses is very great, as under the Chamberlain Act for each 5,000 houses built the State contributes £375,000, and for houses built under the Wheatley Act the State and the local authority between them contribute no less than £1,200,000 for every 5,000 houses built.

It was proposed therefore, that the following scheme should be considered:—

(1) That the Government should introduce a short one-clause Bill and obtain permission from the House to capitalise the subsidy as paid by the State under the Wheatley Act for 25,000 houses, and for permission to be given for houses built under this provision to be sold, either to a local authority or to individual buyers.

(2) The Minister of Health to be empowered to investigate the various new methods and new materials which have been composed, and after he is satisfied as to the type of house to be erected, to issue certificates to the constructor to build 5,000 houses upon this basis.

It was anticipated that, given the reduction in cost which could be made on a productive under mass principles, which, added to an increased subsidy, would enable houses to be sold at a cheaper rate, there would be little or no difficulty in obtaining individual orders for houses. The number would be limited to 25,000 houses. It was anticipated that the price at which the mass-production house would be sold after the expiry of this special selling subsidy would be somewhat higher than those sold at first. This would give an advantage to those buyers who first overcame the prejudices towards new methods, and would, at the same time, enable sufficient houses to be built throughout the country gradually to turn not only public opinion, but also the local authorities towards these new methods.

They who advocate this proposition urge that there is little doubt that, if the new method could be established, cutting the price of house by £80 per house, not only will it allow the Government to reduce the general scale of subsidy, but it will also have the effect of increasing competition with brick houses, and so obtain a reduction in the price of the brick house as well.

Whether the Minister of Health will accept these proposals or not is, of course, unknown. The Treasury, however, will certainly investigate the suggestion with the greatest care, for not only does it necessitate the provision of capital payments, instead of loans over a period, but also 25,000 houses built under the 1924 Act would cost £4,500,000 exclusive of the expenditure to local authorities, as against under £2,000,000 under the 1923 Act. There is also the danger of private interests being too much subsidised. But even allowing for this, there appears to be good reason to suppose that unless some action of this sort is taken we cannot expect under present conditions to see any immediate progress in the mass production of houses, and therefore this outline of the proposals now under consideration by supporters of the Government who are also ardent housing reformers, is of interest to architects and builders.

L.C.C. and Housing Problem.

The Housing Committee of the L.C.C. stated in a recent report they are of opinion that the approval of the Council should be given to the adoption of new methods of house construction as an alternative or addition to the use of bricks, in order that a more rapid solution of the housing problem may be secured. Speaking generally, the Committee do not wish to depart from the methods referred to in the reports of the Moir Committee, and they remind the Council that the three interim reports issued by that Committee deal with various methods of construction, as follows:—

(1) Houses faced with steel plates; (2) concrete houses in various forms; (3) houses with a steel framework and various kinds of infilling or external casings; (4) (a) houses of normal timber construction built entirely of timber; (b) houses with timber framing and infilling of various other materials; (5) schemes where factory construction may be possible in suitable units and the work of assembly carried out on the site; (6) various forms of clay construction; (7) substitutes for particular materials—e.g., plaster, and for roofing materials.

Birmingham Housing Experiments.

Houses have been erected at Hay Mill, for the Birmingham Corporation, for the purpose of demonstrating to the public how new materials and new methods of building working-class houses can be used. Among these are two of the steel houses towards which Mr. N. Chamberlain (the Minister of Health) has given a grant of £200. Another interesting experiment at the Birmingham district is a pair of houses now being built at Bournville that will be equipped throughout for both heating and lighting with electricity. Only one fire-grate being built in each house. It is estimated that this will bring about a saving of some £20.

NEW BUILDINGS IN LONDON.

Acton.—A large garage and repair works are to be erected at Acton, W.3, for Messrs. Stewart & Arden, Ltd., 103, New Bond-street, W.1, to the designs of Messrs. A. H. Davis & Partners, 19, Hanover-square, W.1. The builders are Messrs. H. & J. Taylor, 177, Lewisham-road, S.E.7. The quantity surveyor is Mr. H. W. Langdon, 57-58, Chancery-lane, W.C.1.

Alton.—A new branch is to be erected in the High Street, for the Westminster Bank, Ltd., Lombard Street, E.C.2, to the plans of Messrs. Kemp & How, 4, Bloomsbury-square, W.C.1. The contractors are Messrs. Goddard & Son, East-street, Farnham, Surrey.

Ashted.—Large premises have been acquired by the Rayon Manufacturing Co., Ltd., 62, New Broad-street, E.C.2, for conversion into and equipment as an extensive silk manufactory.

Basinghall-street.—An important site covering some thousands of square feet, and occupied by old buildings, is about to be let on lease for development by the Mercers' Company.

Battersea.—The L.C.C. have decided to make a grant exceeding £11,000 towards the cost of building new classrooms, etc., at Sir Walter St. John's Grammar Schools, in Battersea High-street, S.W.11. The architect to the Governors is Mr. Victor Wilkins, F.R.I.B.A., 12, York Buildings, Adelphi, W.C.2.

Bermondsey.—In connection with the rebuilding of the slum area known as "Hickman's Folly," it will be necessary to rebuild the "George" public-house in Flockton-street. Plans have been prepared by Mr. Kirby, architect to Messrs. Courage & Co., Ltd., brewers, the owners.

Bethnal Green.—New branch premises are to be opened in Green-street, Bethnal Green, E., for Messrs. Rego Clothiers, Ltd., Shoreditch. The architects to the company are Messrs. Davis and Emanuel & H. C. Smart, 73a, Queen Victoria-street, E.C.4.

Catford.—A large number of houses are to be erected in Tatnell-street, S.E. The builders are Messrs. W. T. Champion & Son, Peckham Rye, S.E.15.

Catherine-street.—Alteration and additions are to be made to the business premises at Nos. 25-27, Catherine-street, S.W.1, to the plans prepared by Messrs. Boddy & Dempster, 19, Palace-street, S.W.1.

Croydon.—New shops and showrooms are to be erected in Park-street to plans prepared by Mr. N. K. Humphries, Cleave Way, Woodcote Valley-road, Purley, Surrey. The builder is Mr. H. P. Hawkes, Sandersted-road, South Croydon.

Croydon.—Forty houses in Florida-road, and 10 in Green-lane, Croydon, are to be erected by Mr. J. T. King, Mitchell-lane, Croydon. Mr. W. G. Ingram, Verulam-buildings, Gray's Inn, W.C., is the architect.

Dagenham.—A large factory is to be erected by Messrs. Ballington, Ltd., 45, Basinghall-street, E.C.2, in conjunction with Messrs. Kotzin Bros., an American company, for the manufacture of silk hosiery.

Dollis Hill.—Extensions of the St. Andrew's Hospital are shortly to be put in hand. The architect is Mr. T. H. B. Scott, 11, Finsbury-square, E.C.2.

East Ham.—No. 351, Green-street, East Ham, E., owned by the Rego Clothiers, Ltd., 110a, High-street, E.1, is to be rebuilt, to the design of Messrs. Davis & Emanuel and H. C. Smart, 73a, Queen Victoria-street, E.C.4.

Euston-road.—A proposal for the reconstruction of Euston-square Station N.W.1, including the provision of enlarged surface buildings and booking halls, is under the consideration of the Metropolitan Railway Company. The architect to the railway is Mr. C. W. Clarke, Baker-street Station, W.1.

Harrow.—The St. Margaret's Estate at Harrow is being laid out for building purposes. Plans for a large number of good-sized houses will be executed by Mr. Clifford Sabey, Watford-road, Sudbury, Middlesex.

Harrow.—The premises at No. 354, Station-road are to be converted into a branch bank for the National Provincial Bank, Ltd., 15, Bishopsgate, E.C.3, to the plans of Mr. F. C. R. Palmer, F.R.I.B.A. Messrs. F. Troy & Co., Ltd., 194, Finchley-road, N.W.3, builders.

Hornsey.—A contract is about to be allocated for the building of the proposed extensions of the Hornsey, Finchley and Wood Green Isolation Hospital at Coppett's-road, Muswell Hill, N.W. The additions, estimated to cost £24,000, have been designed by Mr. E. J. Lovegrove, Southwood-lane, W.6.

Hounslow.—A group of 30 houses is to be erected in Spring Grove-road, Hounslow, ranking for subsidy. The builders are Messrs. Perry Bros., 48, Uxbridge-road, W.5.

Kensington.—New offices and showrooms are to be built for Messrs. John Barker & Co., Ltd., at the corner of Ball-street, W.8. Messrs. J. Greenham, Ltd., Worton-road, Isleworth, builders; Mr. H. L. Carbucho, O.B.E., F.R.I.B.A., architect.

London, W.—Large structural alterations are being carried out in extensions to the Palace Hotel, Lancaster Gate, which include the premises recently in the possession of the Unique Centre Club, Ltd. Messrs. G. H. Carter, Ltd., of Holloway, N.7, are responsible for the whole of the work, including central heating, hot and cold water in all bedrooms, &c.

Lothbury.—Operations have now started on the second portion of the reconstruction of the head offices in Lothbury of the Westminster Bank, Ltd. With the completion of this section a commencement will be made on the Lothbury frontages. The architects are Messrs. Lewis & Davis, 22, Conduit-street, W.1.

Maida Vale.—Messrs. G. H. Carter, Ltd., are carrying out extensive additions in Hamilton-terrace, forming a new music room, studio, &c. Lieut.-Col. G. W. Rhys Jenkins, of 65, Chancery-lane, is the architect.

Newbury.—The Reading and District Co-operative Society, Ltd., are about to extend the accommodation at their branch stores in Cheap-street, Newbury. Messrs. Bethall Swannell & Durnford, 1, Broad-street Buildings, E.C.4, are the society's architects.

Regent-street.—Work has started on the site of No. 113, Regent-street, W.1, where new shops and offices for Messrs. Austin Reed, Ltd., outfitters, are to be erected. Messrs. P. J. Westwood & Emberton, 7, Adam-street, Strand, W.C.2, are the architects, the builders being Messrs. W. F. Blay, Ltd., Dartford, Kent.

Richmond.—Extensive alterations and improvements to the Greyhound Hotel—the oldest hostelry in Richmond—were foreshadowed by the chairman of Messrs. Shorts, Ltd., 310, High Holborn, W.C., at their recent annual general meeting.

St. Helen's-place.—Messrs. Dove Bros., Ltd., Cloudesley-place, Islington N., have commenced work on the foundations of a new building in St. Helen's-place, Bishopsgate, E.C.3, for the Leathersellers' Company. Mr. Henry A. Saul, F.R.I.B.A., 10, Gray's Inn-square, W.C., is the architect.

South Kensington.—A row of shops with flats over is to be built on a site in Fulham-road, S.W., for which the agents are Messrs. Alfred Boys & Co., Staple House, Chancery-lane, W.C. Mr. Matthew J. Dawson, 11, New Court, Lincoln's Inn, W.C., architect.

Stamford Hill.—A large block of new property, consisting of 18 shops and showrooms with flats above, is being erected at the corner of Stamford Hill and Clapton Common, E. The contractors are Messrs. West & Brookes (Leyton), Ltd., 59, First-avenue, Hoe-street, E.17, who are working to the designs of Messrs D. Morris & Sons, 57, Charing Cross, S.W.1. A new cinema, to be called the "Stamford Hill Cinema," forms another section of the scheme.

Stepney.—Premises in Bower-street, E., have been purchased by the Council of Toynbee Hall for conversion into a boys' hostel, physical training gymnasium, and social club. Messrs. Culpin & Bowers, 27a, Bush-lane, E.C.4, are the architects.

Strand.—A new story is to be built on the roof of the north-west corner of King's College, in order to house additional laboratories. The contract has been placed with Messrs. Hudson Bros., 207, St. John's Hill, S.W.1, and will be carried out to the designs of Mr. Roberts, the senior lecturer in engineering.

Streatham.—The existing premises on the Aspen House site, S.W., are to be converted into an open-air school at a cost of about £6,000. The builders are Messrs. T. Brown & Son, 280, Milkwood-road, Herne Hill, S.E.24, and the architect Mr. G. Topham Forrest, F.R.I.B.A.

Tooting.—Plans have been approved for the rebuilding of the "Fountain Hotel," at the junction of Fountain-road and Garrett-lane, S.W., for Messrs. Watney, Coombe, Reid & Co., Ltd., Westminster. The work is being carried out by Messrs. John Garrett & Son, 83, Balham-hill, S.W.12, under the direction of Mr. M. T. Saunders, the brewery surveyor.

Victoria-street.—A new office building, with accommodation for a bank or shops on the ground floor, is to be erected, at the corner of Victoria-street and Allington-street, S.W.1. Mr. J. Stanley Beard, M.S.A., 52, Baker-street, W.1, architect. The contractors are Messrs. Holliday & Greenwood, Ltd., Stewart's-road, Battersea, S.W.

Victoria.—The site of an old factory in Gillingham-street, Wilton-road and Berwick-street, S.W.1, is to be cleared and a public covered-in market erected, providing accommodation for about 200 shop spaces. Plans have been prepared by Mr. S. Gordon Jeeves, 16, Hanover-square, W.1.

Wembley.—A new cinema is to be erected in Park-lane on a site opposite the Post Office, which has just been disposed of to a syndicate, the agent being Mr. George H. Ward, 116, High-road, Wembley.

Westminster.—Plans, prepared by Mr. Clough Williams-Ellis, F.R.I.B.A., 226, Ebury-street, S.W.1, have been approved by the Westminster City Council for alterations to No. 48, Royal Oak-pace, Eaton-square, W.

Westminster.—The City Council have approved the proposal for the rebuilding of the "King's Arms" public-house in Buckingham Palace-road, S.W.1, owned by Messrs. Watney, Combe, Reid & Co., Ltd. The architects are Messrs. Petel & Femand, 12, Buckingham Palace-road, S.W.1.

Westmorland-street.—A new wing and other additions at the National Hospital for Diseases of the Heart at Westmorland-street, W.1, are being erected. The contractors are Messrs. Prestige & Co., Ltd., Cambridge Wharf, Grosvenor-road, S.W.1. Mr. Harold Goslett, F.R.I.B.A., 28 Theobald's-road, W.C.1, is the architect.

Wimbledon.—A new school is to be erected in Wellington-road, S.W., for the Borough Education Committee. Plans have been prepared by Mr. Joseph Bowen, Town Hall, S.W.19.

Woolwich.—An expenditure of £57,396 is to be made by the L.C.C. on a new school in Red Lion-lane, Woolwich. Mr. G. Topham Forrest, F.R.I.B.A., County Hall, S.E.1, architect.

British Medical Association Building.

We are asked by Messrs. Bath Arcraft, Ltd., to state that the furniture in the Committee Room of the above building, illustrated on page 101 of our issue for July 17, was designed and made by them.

Obituary.

The death, in his 75th year, of Mr. E. C. Norris, of the firm of Messrs. E. C. Norris & Co., builders' merchants, Bath Bridge, Bristol, has occurred.

HEMOCROFT SETTLEMENTS

The chief subject of debate at a week-end conference of the Bristol Association of Industrial Research was "Homecrofting," an American scheme to provide the worker not only with a house, but also with sufficient land attached to it to enable him to raise sufficient foodstuffs to sustain himself and family in times of unemployment. The plan was outlined by Professor J. W. Scott, of University College, Cardiff, who has written a book upon the subject.

The Professor described "Homecrofting" as a plan to hit both the housing shortage and the cost of living at the same time. The idea was to establish Homecroft settlements—that was, working-class suburbs built on cheap land near industrial centres. The settlements would have schools in the middle of them, and the workers would be transported to and from their work night and morning. Every family would have its own self-contained house, which would have half an acre of land attached to it upon which the householder would be able to raise food; in fact, the germ of the idea was to make every dwelling a food factory. Professor Scott said he thought that we were thinking too much about houses and housing shortages. A housing shortage was a temporary affair, and the one we were in would not last much longer, as anyone could see who watched the rate at which things were moving, for whatever else was slack just now, house construction was not. He maintained that all the thought which we were giving to houses should have been given to the food question. He thought there were thousands of working men to-day who were ready to spring at such an idea. If a workman could make up the difference between his present rent to 18s. per week, the house and the land would become his own property in 18 years, but though ownership was to be preferred, a man should have the option of renting. Homecrofting was simply a proposal to enable a man whose money had stopped for a time to make the things he could not buy.

Following Professor Scott's address the conference proceeded to discuss the scheme, with the result that many criticisms as well as suggestions were forthcoming; but it was realised, after the matter had been thoroughly examined, that there were far more possibilities in it than were at first recognised.

APPRENTICESHIP IN THE ROYAL AIR FORCE

The Air Ministry announces that seven hundred aircraft apprentices, between the ages of 15 and 16½, are required by the Royal Air Force for entry to the Aircraft Apprentice School at Halton, Bucks., in January next. These apprentices, who must be well educated and physically fit, will be engaged as the result of two examinations, one an open competition conducted by the Civil Service Commissioners, and the other by a limited competition carried out by the Air Ministry in conjunction with the local education authorities throughout the country. Boys accepted for employment will be attested as airmen and will engage to complete a period of 12 years' service on the active list of the Royal Air Force, the period commencing to run from the date of their attaining 18 years. On completion of their active list service they will be discharged to civil life or may be allowed to re-engage to complete 24 years' service for pension. Normally their duties are carried out on the ground in the technical workshops of the Air Force. Application to sit in the open competition must be made to the Secretary, Civil Service Commission, Burlington Gardens, W.1, not later than September 3. Candidates for the limited examination should make application, if they are still at school, to their Headmasters with a view to securing a nomination from the education authority responsible for the school. If they have left school, application should be made to the Advisory Committee for Juvenile Employment in their area.

RATES OF WAGES IN THE BUILDING TRADE

(For rates of wages in the Building Trade in Scotland, see Page 187.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

AUGUST 3.—**Reigate**.—HOUSES.—Twelve houses at Betchworth, for the R.D.C. W. J. Hutton, District Surveyor, 48, High-street. Deposit £3 3s.

AUGUST 4.—**Ammanford**.—LODGE.—Caretaker's lodge on the site of the proposed cemetery, near Dyffryn House, and constructing of carriageways, paths, fencing, &c., on a portion of the field for burial purposes, for the U.D.C. D. Thomas, architect and surveyor, Quay-street.

AUGUST 4.—**Bridgnorth**.—DWELLINGS.—Erection of eight dwellings (and probably 12), in pairs, on an approved site in the Image-lane, for the Borough Council. Borough Surveyor's Office, Bridgnorth.

G. C. Vernon-Inkpen, engineer, 40, Commercial-road, Portsmouth. Deposit £10 10s.

(Continued on page 201.)

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ABERSTYCHAN.—The U.D.C. has decided to build new council offices, at an estimated cost of £4,000.

ABERTILLY.—At an estimated cost of £13,500, the U.D.C. is to make extensions of the gas works.—The Council is to erect 100 houses on the Sufryd, Crumlin, site.

AMMANFORD.—The U.D.C. has received Ministry sanction to the expenditure of £47,257 on a district scheme of drainage.

BARNBY-SANDALL.—The Committee of the Don Valley Conservative Association have secured a site at Barnby Dun for the erection of club premises.

BEXHILL.—The T.C. passed plans; Science and art block, "St. Ives" Elmstead-road, by G. H. Gray, for Miss Kyrke-Penson; 12 cottages off Maple-walk, by Tubbs & Messer, for the Right Hon. Earl de La Warr.

BLACKPOOL.—The Parochial Council of Holy Trinity Church, South Shore, are proposing to erect a Memorial Hall, Sunday School, and Vestries. The plans have been prepared by Mr. A. A. C. Moore, architect, 19, Abingdon-street.

BRADFORD.—The E.C. are to obtain plans for a school clinic on the site near the Lower Grange housing estate.—Having had a report on the condition of the low level conduit from Barton to Gilstead, the Corporation propose to replace the original stone culvert with steel tubes, at a cost of £6,000.—Eight acres at Woodhall Estate are to be used as playing fields for the Technical College.—Tenders are being invited for the erection of 166 houses on the Lower Grange estate.

BUCKINGHAMSHIRE.—The C.C. are discussing with local authorities the provision of new accommodation for mental defectives.

BURNLEY.—The Housing Committee have accepted tenders for the erection of 24 additional houses on the Palace House site.—Under the Rural Council's scheme for assisting private enterprise, 49 houses have been approved for subsidy.—It is proposed to seek approval for the building of 30 more houses.

BURY.—The Borough Engineer has been instructed to prepare a sketch plan providing the following accommodation which the Sub-committee consider desirable, namely, one plunge bath, 20 slipper baths, a washhouse to accommodate 20 persons.—A scheme has been submitted for the building of houses in the borough on various sites, and recommending the building of 150 houses.—At the Sewage, Paving and Streets Committee meeting plans submitted for the erection of over 70 houses in different parts of the borough were approved.

CHADDERTON.—The parishioners of Denton-lane Church are to go forward with a scheme for the speedy erection of a new permanent church.—The D.C. are proposing to erect new baths at Whitegate.—The Surveyor has been instructed to prepare rough plans to include the following: Ladies' and men's swimming baths, private baths, public washhouses (30 stalls), superintendent's house.

CHELTENHAM.—The Corporation have approved of designs for sixty houses, to be erected by Mr. Drew, under his fourth contract.

COVENTRY.—The E.C. recommended that application be made for sanction to a supplemental loan of £2,174 in respect of extensions at Barr's Hill Secondary School.—Land at Whitley is to be scheduled for a site for a public abattoir.—A site in Albany-road is to be allocated for a new school.

CROMPTON.—The E.C. have approved of the scheme for the conversion of Crompton House into a central school. Mr. R. Martin, the diocesan architect, has prepared the plans.

CROYDON.—The C.B. has recommended the Town Clerk to apply to the M.H. for approval to the raising of a loan for £7,072, the estimated cost of 12 cottages at the Mental Hospital.—The Council are to erect 152 houses on the Waddon estate, by direct labour, at an estimated cost of £77,489.—A sub-station is to be built at Mitcham-road cemetery, for the C.B.—Sanction has been received from the M.H. for the borrowing of £60,671 for the erection of houses on the Waddon housing estate.—Plans passed: Scratchley Bros., 13 garages, Kitchener-road; Barney & Sons, showroom, &c., Brighton-road, Purley; J. A. Dartnall, 13 houses and shops, and four houses, London- and Warwick-roads; Scratchley Bros., 16 houses, South Norwood-hill; F. W. Milton, 25 houses, Green-lane; W. J. Ingram, 46 houses, Green-lane and Maryland-road.

*NO DATE.—London, W.C.2.—Architectural Assistants (temporary posts) required by the Air Ministry. Application Forms from the Secretary (S.1 437), Air Ministry, Adastral House, Kingsway, W.C.2.

JUBILEE OF A WELL-KNOWN FIRM OF BUILDERS' MERCHANTS

As we briefly announced last week, Messrs. Nicholls & Clarke, Ltd., the well-known firm of builders' merchants, of Shoreditch, are just now celebrating the jubilee of their establishment. Fifty years ago Mr. Nicholls, senr., who is now in his 84th year, and happily still able to take an active share in the work of management, joined with Mr. Clarke, as partner, in founding what has since developed into one of the largest and most flourishing businesses of its kind. The original warehouse in Shoreditch still exists, but now forms only a small section of the extensive warehouse, showroom and office premises which, by the taking over of adjoining sites from time to time, have grown up around it and now occupy, as a single block, a big frontage in Shoreditch and practically the whole west side of Blossom-street to the rear. It is estimated that the floor space which the firm now possesses is fifty times as great as it was originally, and evidence shows that the business has doubled itself within the past ten years.

To set forth in detail the manifold activities of the firm would probably occupy several pages of *The Builder*, but it will convey a clear idea of the extent of the firm's business if we state that the only basic building materials not dealt in are lime, cement and bricks. Everything else is to be found in these great warehouses stored in prodigious quantities, for it is a first principle of the firm to have plentiful stocks on hand ready for immediate distribution.

As the visitor passes through the narrow passageways of these tightly packed warehouses, it seems inconceivable that the building trade should ever run short of materials. Here you will find great stores of lead, colours and varnishes with, near by, enormous tanks of oil and turpentine; there, huge stocks of stoves, ranges, iron castings, rainwater and sanitary goods; elsewhere, immense reserves of sheet, wired and figured glass, or tons of nails in sacks. There is no waste of space, every inch of room is economised. For instance, on one floor there are five or six hundred baths stored on the "nesting" principle—that is, one inside the other. Messrs. Nicholls & Clarke are not merely merchants, they actually manufacture many of the materials they handle—paints, for instance, and leaded lights. They make up the tile surrounds of fireplaces, turning out as many as fifteen or twenty a day. They possess also a well-equipped sanitary engineering workshop, with about a dozen lathes in operation.

The Shoreditch headquarters includes, besides offices and sales counters, an extensive series of showrooms, where everything may be viewed conveniently and in comfort—sanitary and mantel suites, stoves, ranges, ironmongery, wallpapers—and so forth. The wallpaper showroom may be specially mentioned for its excellent equipment of up-to-date display panels.

The firm's business has been increasing from the day it was founded. As the freeholds of surrounding property have become available they have been regularly acquired, and as a result of this far-sighted policy, the business to-day is one of the most conveniently organised to be found in London. For instance, the stabling and van sheds are on the opposite side of Blossom-street, only a few yards from the loading banks of the warehouse. These banks accommodate eight or nine vans or motor lorries at a time. One of the most recent additions to headquarters is a considerable space rented from the railway company and used for the storage of rainwater goods, pipes, &c., but the need for expansion still presses. In addition to their premises in Shoreditch, Messrs. Nicholls & Clarke possess

a railway siding and stores at Spitalfields, for heavy iron goods and stoneware, while at Park Wharf, Old Ford, they have a long canal frontage with good accommodation for barges. Here also are situated their paint works, glass bevelling and silversing works, extensive garages for their fleet of motor lorries, and engineering workshops.

With a record of success behind them such as we have briefly indicated, it is apparent that the firm may confidently look forward to another fifty years of expansion, usefulness and prosperity.

TRADE NEWS

Change of Address.

Messrs. Sydney Friday & Sons, wainscot oak importers, have transferred their head offices from the City to their new wharf on the River Lea, where a substantial block of offices has been erected. The address is Oak Wharf, Ravensdale-road, Stamford Hill, N.16. Telephone, Clissold 6254.

Vickers-Spearing Boiler Co.

We are informed that Messrs. Vickers, Ltd., have now acquired the whole interest in the Vickers-Spearing Boiler Co. Mr. A. H. Spearing has resigned his position as Managing-Director, and is no longer connected with the company, which will be carried on under the name of "Vickers-Spearing Boiler Co., Ltd.," as before. We understand that this change also gives Messrs. Vickers, Ltd., the control of Messrs. Tinkers, Ltd., Daisyfield Boiler Works, Hyde, near Manchester.

An Automatic Burglar Alarm.

The modern burglar grows more and more scientific in his nefarious trade, and more and more scientific become the devices invented to foil his activities. Given time, however, the modern technical burglar will attempt to break through any kind of mechanical protection, and hence security engineers, custodians of securities, bullion and valuables now realise that, no matter how efficient their protective devices, it is better to remove any possibility of an attack being made upon them by keeping the burglar outside the premises. The automatic burglar alarm overcomes the hitherto dangerous element of time, because the alarm is raised the moment that he begins operations, and no burglar can continue to work while the alarm bells are ringing in the premises and on the streets.

The system of the Automatic Burglar Alarm Co., Ltd., of 7, Finsbury-square, London, E.C.2, is one that has general applications. It can be adapted to bank strong-room doors, to the wall of strong-rooms, to the surfaces of strong-room doors, to isolated banks as a day alarm, to lock-up shops, to town and country residences, to doors, windows, floors, partitions, and so forth. Some special points concerning it are that it is keyless, automatic in action, and cannot be inadvertently left in the unset position; it is fool- and tamper-proof, any interference with the inside wiring being indicated at once; it cannot be "shorted out," "bridged," or the current diverted; it cannot be silenced except by an authorised person; it cannot be switched off from the inside of the building. The alarm rings if any part of the building that is protected is entered, if any of the wires are cut or touched together, or if the battery is disconnected or completely destroyed. If a bell is tampered with the remaining bells begin to ring.

We may add that premiums are halved where the Alarm is installed, and that burglaries are definitely prevented by its use.

Messrs. G. H. Carter, Ltd., builders, decorators and squash racquet court specialists, have recently opened an office at Evelyn House, Oxford-street. Phone. Museum 8654.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXIX.—No. 4,305

AUGUST 7, 1925

REORGANISATION

DURING the period which has elapsed since the end of the war the regular work of the R.I.B.A. has increased very greatly in amount and in scope, and the recent amalgamation with the Society of Architects, which at once abolished the duplicated work which was being carried out, has, of course, considerably augmented the responsibilities of an Institute now representing architects of Great Britain. The new Charter and By-laws have largely increased the size of the Council and the membership is drawn, to a much larger extent than before the war, from outside the London area. The Council now numbers 67 members in place of 42, and of these about 45 per cent. have to make a special journey to London to attend meetings. Attendance at fortnightly Council meetings involves a heavy loss of time on the part of non-London members.

It is felt by the Council of the Institute that the existing machinery for carrying on the work of the R.I.B.A. is becoming overstrained. The old method under which a Council, consisting mainly of architects living in the London area, met once a fortnight and was the sole executive authority, is becoming unworkable under the new conditions. The Council forms a narrow funnel through which all matters involving executive decisions, however trifling, must necessarily pass. The time of the Council is much occupied with small matters of routine detail, and it is difficult to find time for the full discussion of really important matters of policy and principle which really affect the future of architecture. The time appears to have come for finding a means of simplifying the work of the Council and endeavouring to save the time of its members by eliminating all unnecessary work and allowing the Council more time to concentrate on the more important questions of general policy.

With this object in view it has been decided that in future the Council shall meet once a month during the Session and that the Selection and General Purposes Committee shall be constituted with enlarged powers as an Executive Committee consisting of the President, the Hon. Secretary, the Chairmen of the four Standing Committees, the Chairman of the Board of Architectural Education, the Chairman of the Finance and House Committee, the Chairman of the Allied Societies' Conference, the Chairman of the Registration Committee, and two non-London Members of the Council.

The Executive Committee will meet at least fortnightly from the beginning of October to the end of July. It will receive on behalf of the Council the reports of all Committees, except those of the Board of Architectural Education, deal with any matters in these reports that call for immediate action, and report before the Council with or without comment the reports received from Committees. It will have executive power to deal summarily with all matters of routine not affecting general policy or finance and all business requiring urgent attention before the next meeting of the Council, and will report to the Council for ratification any action taken since the last Council meeting.

The Board of Architectural Education will be enlarged and made more widely representative, and will meet four times a year, and the large number of existing Committees of the Board will be reconstituted as three Committees—Schools, Examinations, and Prizes and Scholarships—with executive powers to deal with all routine matters, but making recommen-

dations to the Board on all matters of principle or policy. Members of the Council will retain their present power of bringing any matter directly before the Council by giving notice to the Secretary.

The Executive Committee has been constituted forthwith as follows:—The President, the Hon. Secretary, the Chairman of the Art Standing Committee, the Chairman of the Literature Standing Committee, the Chairman of the Practice Standing Committee, the Chairman of the Science Standing Committee, the Chairman of the Finance and House Committee, the Chairman of the Board of Architectural Education, the Chairman of the Allied Societies' Conference, and two non-London members, Mr. H. T. Buckland (Birmingham) and Mr. Francis Jones (Manchester).

These changes will without doubt be appreciated by all those who have had experience of Committee or Council work for private or public bodies, for although there are institutions whose Committee or Council work is carried on in the most business-like manner and with commendable expedition, there are others, work on the Councils of which may be unduly delayed by one or two loquacious members who are not properly controlled by the chair, and even with firm rule a Council is often too large to be fully efficient. It is for this reason that the usual procedure in connection with a public body or an important society is for the detail work to be done in committee and for the Council to confirm or reject the reports and recommendations of these committees; but these committees in no sense possess executive powers. This, of course, will still be the general procedure with the Institute; but while the whole Council will still be fully responsible for general policy and finance, the Executive Committee will have power to deal summarily with all matters of routine and all business requiring urgent attention before the next meeting of the Council, and their decisions will come before the next meeting of the Council for ratification. This procedure should work well, but it may be found very difficult in practice to rescind decisions already made—unless, of course, no result follows the decisions of the Executive until the whole Council have confirmed their decision, and if this is to be the procedure, then the so-called Executive will be nothing more than a superior committee. Much depends on the wisdom of this Executive Council and whether or not they act as a sort of Soviet Government. As we saw during the war, a small executive body within the Cabinet tended to become an increasingly autocratic body; but there is nothing except the fallibility of mankind why such a government should not make for the greatest efficiency. Still, the fact remains that when a Cabinet or Council give executive powers to a committee elected within their ranks, the Cabinet, even when they reserve to themselves the power to confirm or reject the decisions of their executive, find in practice that they have really delegated their power to another body. That the Executive Committee of the R.I.B.A. will have large powers will be realised from the above statement, and we have no doubt they will use them wisely, and that they will leave for the consideration of the whole Council any issues which are likely to be contentious. While the Institute is represented on the Council by the able and conscientious men who are year by year chosen by the electorate, wise decisions will be made by the Executive Committee for the good of the profession as a whole, and the Council itself will rarely, if ever, find themselves at variance with the action taken on their behalf.

NOTES.

The Manchester Art Gallery.

It is unfortunate that this controversy should not yet have subsided; the agitation now takes the form of demanding a new competition, but those who suggest this do not perhaps realise that there may be some difficulty in persuading architects to spend more time and money on preparing designs which, even if they should win the competition, might be liable to a repetition of the treatment of subsequent rejection. The principle that the umpire's or assessor's judgment must be final is universally recognised, whether we are dealing with cricket or the children's corner in a newspaper, but the justice of an award will always be questioned where the conditions have been violated in the accepted design. If the idea gets abroad that the first premium is liable to be withdrawn after it has been duly awarded, the whole competition system must fall to the ground—unless, of course, a definite charge of unfairness can be maintained.

Competition Conditions.

TROUBLE usually seems to arise through conditions that are ambiguous and that are far too much detailed. Surely, if a town wants a museum, all it need do is to give the site, and particulars of what the museum is to accommodate, and leave the competitors to settle the problem in their own way in a rough preliminary or eliminating competition. The whole process of inviting and answering questions seems unnecessary and tiresome, since the answers given frequently invalidate the work done to date by other competitors. If competitions are to retain confidence, either with the public or with architects, the waste of labour will have to be eliminated, the conditions pared down to the bare bone, and then, above all, the assessors' decision must be accepted. We cannot prevent laymen from writing letters of criticism, nor can we expect the full support of the profession unless the whole spirit of the agreement between the promoters and the competitors is adhered to.

Architecture and the League of Nations.

WITH the object of bringing together students from many different countries in order to study international problems and in particular to discuss differences of outlook and to exchange ideas, the International Universities League of Nations Federation has organised a series of summer courses at Geneva. These courses, which began on July 13, and end on September 5, comprise not only the technical aspects of international law, economics and administration, but in many cases are devoted to studies of the culture and institutions of the various nations. Archi-

itecture is given a place, it is interesting to observe, as one of the liberal subjects of the syllabus. A course on "English Architectural Traditions and their Relation to the Architectural Traditions of Europe" is to be given by Professor Lionel Budden, of Liverpool University. Other lecturers who have been invited to deliver courses on a variety of subjects are Dr. R. W. Livingstone, the Vice-Chancellor of Queen's University, Belfast, Mr. Desmond Fitzgerald, Minister of External Affairs, Irish Free State, Sir Michael Sadler, Master of University College, Oxford, and late Vice-Chancellor of Leeds University, Mr. W. S. Culbertson, Vice-Chairman of the United States Tariff Commission, and other well-known publicists and scholars, American, European and British. Amongst the English contingents of students attending the courses this month are a number of architectural undergraduates.

The Perception of Beauty.

MR. ERNEST EDWARD SMITH writes from Cromer:—"In your issue of May 8 were some strictures on 'the average builder's undiluted ignorance of the earliest and most childish funda-

mentals among architectural principles. As 'the average builder' is not a hypersensitive person you will not have been inundated with indignant rejoinders! have no intention of tilting at you for speaking the truth. But what is to be done? How can 'the average builder' be educated and taught to appreciate even the elements of architecture? You cannot send him to school or even induce him to employ a draughtsman with taste and skill to design his buildings. He is often an uneducated man with business capacity who has started 'on his own' and gradually working up a connection founds a prosperous business. He can carry out contracts and work to drawing. It is when he launches out with a pencil and T-square his deficiency becomes apparent. How is it to be remedied? It looks a hopeless proposition, and we must wait until a younger generation is more thoroughly trained to appreciate what is beautiful in line and colour." We might have uttered strictures similar to the above on many architects. The love of beauty in line and colour is born in some, and an instinct for its expression is also part of the birthright of many. Much may be done by education, association, and training.

Wall Panels in the Adam Room at Wembley.

Painted by MR. A. C. CONRADE.

ing to develop what already exists if only in embryo, but this initial spirit cannot be created by either books or training.

Norwich City Development. WE have already referred to the town-planning matters which have lately occupied the attention of the Norwich City Council. Mr. George J. Skipper's suggestion for a new roadway formation ought to be carefully and fully considered, and the total outlay would, we feel sure, be well justified. It is doubtless difficult for our town and city councils adequately to envisage the future, but it is assuredly their duty to do so, and the duty should be performed even if it leads to some apparent disregard of present interests. The monopoly of privileges and advantages which has grown up around us in every direction ought to be broken down whenever it is likely to impede future progress. If a cattle market or a pickle factory has been long established in the centre of a town the value of property which is largely owing to their proximity ought to be of small account compared with the ultimate benefit of the whole town. Some day, perhaps, we shall wake up to the anomaly of a Covent Garden in the centre of London, but it is possible that before this fortunate awakening takes place the City of Norwich may have a better future assured for it when better roadways and wiser allocation of markets have been provided.

Norwich Castle. IN addition to the proposed new motor road, Norwich is confronted with another problem of some importance. New extension buildings of the Shirehall are proposed on a site to which there have been advanced serious objections, amongst which is the obstruction of a fine view of the Castle. It is difficult, in the absence of detailed information, to form a right opinion, but any interference with a fine view of an historical building like Norwich Castle is to be deprecated, and we can well understand the existence of strong local opposition.

Separation of Buildings. A CORRESPONDENT informs us that in some two-story dwellings which are being erected by the London County Council there are blocks in which houses, having separate entrances, are divided only by a half-brick wall carried up to the ceiling of the top story. Our correspondent suggests that there is danger of fire passing from one house to another through the roof, and asks whether, in such cases, there should not be a proper party wall between the houses. That adjoining buildings must be separated by party walls is a familiar rule under the London Building Act, but the question is, whether the dwellings mentioned are separate buildings or tene-

The Dog Nuisance. THE Hampstead Borough Council has done well in issuing posters asking the public to co-operate in abating the nuisance arising from dogs fouling the pavements. It is perfectly easy to train dogs to respect the footpath, and when we are more nearly civilised we shall certainly find by-laws against this nuisance universally in force. In the interests of the dogs themselves it would be desirable to prohibit the keeping of dogs altogether in districts where adequate exercise is impossible. The cat nuisance is even worse, and the present state of affairs in which thousands of stray and starving cats are allowed to keep the inhabitants of our towns awake is really intolerable. People who pretend to be

Peacock "Bird Fountain."

By MISS MALVINA HOFFMANN (to whose work reference was recently made in these columns).

ments in one building? If the latter, and if there are means of communication through trap doors in the ceiling, the arrangement may conform to the letter of the law, but can hardly be deemed expedient or desirable.

too tender-hearted to kill superfluous kittens, throw them out on the pavement to eke out a wretched and precarious existence. The restriction of superfluous animals in towns might well be the aim of the R.S.P.C.A.

Window Restoration. A VERY interesting old window is being preserved to us by the skill of Messrs. Clayton & Bell, who have nearly completed the strengthening and repair of the Susanna window from the St. Edmundsbury Cathedral church. Though there is no complete coherent design there are some passages of charming colour and we are fortunate in the execution of its repair by the capable artistry of Messrs. Clayton & Bell. During its exhibition at their studios in Clifford-street, there were also shown some good pieces of old Dutch painted glass and some fine examples of mediæval heraldic tiles discovered a few weeks ago in the "Radnorshire Arms," Presteign.

GENERAL NEWS

Strand Widening.

The London County Council are endeavouring to obtain powers to acquire property on the south side of the Strand, the value of which is estimated at £400,000.

Limehouse Fields Lay-out.

Messrs. Barnes & Davidge have been appointed architects for the lay-out of the Limehouse Fields Unhealthy Area.

Repairs to the Tower.

Mr. B. Peto, in the House of Commons last week, asked the Under Secretary of State for the Home Department, as representing the First Commissioner of Works, whether, seeing that the reparation work at the Tower of London and Farleigh Castle in the past six years had cost, respectively, £153,207 and £7,572, and the total expenditure on the repair of ancient monuments and historic buildings during these six years had been £950,680, and that further works were being commenced, in view of the urgent need for public economy and houses, he would postpone any further work of repair of ancient buildings for the present.

Mr. Locker-Lampson said that the First Commissioner considered that it would be a profound mistake to postpone necessary works of repair to ancient monuments and historic buildings, in which the public took a great and growing interest. The figures quoted in the question covered the whole expenditure on monuments and historic buildings, including the cost of caretaking. The figures for the Tower of London included the wages of the Yeomen Warders as well as the cost of the police who were employed there until 1923. Against the expenditure must be set the receipts from admission fees amounting last year to over £28,700.

A Stone of St. Paul's for America.

A stone of the dimensions of a 3 ft. cube, which formed part of the south pediment of

St. Paul's Cathedral and was one of those displaced in the course of the recent repairs, has been presented to the American School of Journalism attached to the University of Missouri.

St. Martin's Spire.

It has been discovered that the spire of St. Martin's Church, Ludgate Hill, is not vertical. It inclines slightly towards the roadway, but there is said to be no danger of its falling, for the masonry of the church and solid square tower on which the spire stands are apparently as upright as when they were first put in position.

Edinburgh City Architect's Retirement.

Mr. James A. Williamson, Edinburgh City Architect, has retired after 45 years' service with the city. He was appointed City Architect in 1908, and has since been responsible for the Central Fire Station, and other big Corporation buildings.

Mersey Tunnel.

The new tunnel for general traffic under the River Mersey, between Lancashire and Cheshire will begin about 1 mile from the river bank on each side, with a gradual slope downwards until under the river bed it will be just over half a mile in length on the level. It is expected to take five years to complete, at a cost of about £5,000,000.

French Prix de Rome.

M. Alfred Audoul has been awarded the French Prix de Rome for Architecture.

Alfred Gilbert's "Eros."

The plaster cast from which the bronze of Alfred Gilbert's "Eros" was taken has been discovered recently stowed away in the Maida Vale house with its large studio where, onwards from the early nineties, the sculptor lived and worked. The existence of this study from the life is apparently unrecorded.

COMPETITION NEWS

College Buildings, Liverpool.

The governing body of the Liverpool College invite designs for proposed new buildings for the College on a site at Mossley Hill. The assessor is Sir Giles Gilbert Scott, R.A. Premiums of £500, £300, and £200 are offered. Conditions of competition and a plan of the site can be obtained from Mr. J. H. Lintern, Secretary, Liverpool College, Sefton Park road, Liverpool, on and after September 1, on payment of a deposit of £2 2s. Designs have to be sent in by January 1, 1926

	Particulars published in "Builder."	Sending in date.
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties., 35, Old Queen-street, S.W.1		April 24 .. Dec. 31
Copenhagen Bridge. Three premiums, highest 15,000 kroner. Apply C. Eng.'s Office, Town Hall, Copenhagen. Dep. 100 kroner		April 24 .. Sept. 1
Newcastle Fire and Police Station. Premiums: £500, £300, £100. Mr. P. S. Worthington, F.R.I.B.A., Assessor ..		June 12 .. Oct. 8

MR. ARTHUR T. BOLTON, F.S.A., F.R.I.B.A., Honorary Architect.

THE RAILWAY CENTENARY

THE Railway Centenary has an especial interest for architects, and for close on eighty years the subject has been dealt with in *The Builder*. The construction of roads, canals, and railways by the Victorians formed not the least part of industrial development in the last century. In the sphere of railroad construction, such works as tunnels, viaducts and stations, have been endowed with a monumental character which has lifted them above the plane of utility. There is an air of permanence about the best features of railway practice which contrasts favourably with the stupendous monuments of antiquity. It is somewhat surprising that of late years so little attention has been given by architects and the public to objects of construction with which most people are familiar.

It is almost impossible to state when railroads were first invented, but old authorities mention "Wayleaves on the Transit of Coal." Lord Keeper Guildford, who was upon the Northern Circuit in 1676, describes the manner of carrying coals on wagons which ran on rails of timber from the colliery to the road. There are numerous references to the wooden railroads of the coal districts, which were in use in the eighteenth century. A further improvement was the adoption of iron, which enabled double the load to be drawn by horse traction. The iron road first appeared at Colebrook Dale, in Shropshire, about the year 1767. But it is conjectured that as early as 1716 malleable iron was used in the North of England in the form of plate rails secured to timber parallels. The rail as it is now known first came into use in 1776, being used for minerals belonging to the Duke of Norfolk near Sheffield. At the close of the eighteenth century, stone blocks supporting the rails were introduced. It is interesting to read that the first public railway company was instituted at Loughborough in the year 1789, but this scheme did not mature. There was Trevithick's Circular Railway, in Euston-square, in 1808, which was intended to attract public attention in London; and the railroad from Plymouth to Dartmoor fostered by Sir Thomas Tyrwhitt. It was not, however, until the Stockton and Darlington railway was completed and opened in 1825 that a railway within the correct meaning of the term was used for passenger and goods traffic. Then followed the line from Liverpool to Manchester, with its tunnels, the Sankey Viaduct, the Kenyon excavation, and the track floated on Chatt Moss. In London, the earliest railway was the line to Greenwich, followed in 1837 by the Birmingham line from Euston-square. About this time the Great Western Railway was projected from London to Bristol and from thence to Exeter. It was an era of prophecy and speculation, public opinion being divided between the skill of engineers and admiration for the acumen of the railroad kings.

We are accustomed in these days to assume that the locomotive engine came into being with the "Rocket," and most people imagine that the Stockton and Darlington Railway was the first of its kind in the world. Investigation shows that George Stephenson and his contemporaries, far from inventing a steam machine, merely improved on several existing ideas. There was a railway actually working in Wales in 1804. It is, perhaps, strange to consider that the greatest engineer of the early nineteenth century came from Cornwall and not Northumberland. There are some who would give the credit of the steam locomotive to a French engineer of the name of Cugnot, who is reputed to have placed a locomotive on the road in 1770. We must not ignore the claims of Watt and Murdoch. Trevithick's high-pressure Cornish boiler was working in 1797, and at this time he made the model locomotive which is to be seen in South Kensington Museum. Two years before Trafalgar was fought, Trevithick had brought a road locomotive to London, and had driven it along Oxford-street, where it came to an untimely end by crashing into a

shop. A year later, he was at work on what might be termed the first railway in the world at Merthyr Tydvil; and in the same year he built and despatched a locomotive to Newcastle-on-Tyne. The celebrated "Catch Me Who Can," which Rowlandson sketched, exciting the spectators who thronged to see it clanking round the track which became Euston-square, was virtually a prototype of Stephenson's "Rocket." Both from a novelty were developed a mechanically-propelled road carriage and the locomotive which drew the first train along the sixteen miles of the Stockton and Darlington Railway. Architects, while interested in the development of the steam engine, are more concerned with the formation of the railways with their concomitant features of structural and monumental importance. It is interesting to observe that a century ago architecture and engineering were more closely allied than is the case to-day. New problems had to be faced, calling for skill and ingenuity, for the public were critical regarding the appearance of stations, viaducts and tunnel fronts. There was no precedent for such works, the viaducts alone bearing some resemblance to the aqueducts across the Roman Campagna. The railroad engineer not only surveyed the proposed route, but he furnished designs for works, which, properly considered, could have been devised by architects. It not infrequently happened that architects were commissioned to furnish designs for such features, but it can be stated that the railroad era witnessed the divorcement of architecture from certain aspects of civil engineering well within the province of building. John Rennie, the son of the builder of Waterloo Bridge, was, perhaps, the most gifted of Victorian civil engineers. He was one of the few of his time who could, within certain limitations, compete with architects. In the first half of the nineteenth century tradition in building, in part a legacy from the late eighteenth century, was still strong enough to call for good manners, even in the case of structures intended solely for utility. This explains the humane proportions which were consistently observed in works which even to-day appear novel. The directors of the London and Birmingham Railway showed foresight in commissioning Hardwick to design Euston Station, the first part of which included a Doric entrance and lodges, and the platform shelters. Hardwick became the company's architect. He it was who kept his eye on the engineer's drawings for various works on the road, and it is possible that he gave a suggestion for the south and north front of the tunnel at Primrose-hill. The fine series of pencil drawings by Bourne, which can be seen at Euston Station to-day, almost Piranesian in their eloquence show the consistency which modified this early railway enterprise. Hardwick must have had a busy time as the line neared completion. He used the Doric order for the London gateway, and with Classical precision selected Ionic for the gateway at Birmingham. The line was completed in 1837 as far as Denbigh Hall (the name of an inn on the Watling-street), and from thence passengers journeyed to Rugby by coach. Finally the whole line was opened for through traffic, and a few years later was extended to meet the Grand Junction Railway running from Birmingham to Liverpool, Lancaster and Carlisle. In 1847 the London and Birmingham Railway, which, like Aaron's rod, had swallowed up its rivals, in a north-westerly direction, was the Royal Mail route to the north; the Midland line came as far south as Leicester—passengers to York from London journeying from Euston-square to Birmingham and Derby. Travelling by rail was no longer a novelty. Euston was one of the show places of London, and in consequence of the demand made by the travelling public further additions were made to the station.

In 1847 we find Hardwick ignoring the earlier disposition of the terminus, and adding

the Great Hall, the domed booking halls, the board room and offices and at the same time building the Clearing House in Seymour-street. London now had two great railway systems, namely, the London & North Western, and the Great Western. It was Hardwick who designed the hotel at Paddington, but Brunel devised the crinoline roof of iron and glass, and superintended the bridges over the Thames and the embellishments of the Box Tunnel. While these works were on, Mocatta was busy with the buildings at London Bridge. In 1850 a direct line was projected between London and York to connect with the North Eastern system, and to provide an East Coast route to Scotland. This line was opened in 1854, when Cubitt astonished London with his unique treatment of the terminus of King's Cross. The Great Northern line like the London & North Western and Great Western, is remarkable for the classical character of its stations and tunnel fronts. There is the York-road tunnel, the North and South Welwyn, the viaduct at Welwyn, and the tunnel at Gonerby. The Midland Railway which, by 1855, had been brought as far south as Bedford, was carried on a single line to Hitchin, the Midland trains proceeding to King's Cross. Hardwick, in the meantime, was in great demand as a railway architect. He is found acting as adviser to the South Eastern Railway Co. at Dover and other places. At this time we find Sir William Tite, who was both architect and member of Parliament, designing railway stations in England and France. In architectural circles there was becoming apparent a revolution against the employment of Egyptian and classical motives for features of railroad construction—a change of taste occasioned by the publication of Pugin's contrasts. The Eastern Counties Railway, which had been projected early in the 'forties, had its terminus at Bishopsgate, where the buildings were of timber construction. There are several classical stations on this line, such as the example at Roydon and the Italianate station at Cambridge, designed by Sancton Wood. With the fashion set by Brunel at Paddington, and followed by Cubitt at King's Cross, opinion now centred upon the curvilinear form of train shed, but it is significant of the propriety of Hardwick's original design for the shelters at Euston that the latter are now in general use. In 1866 it was decided to bring the Midland Railway through South Bedfordshire and Hertfordshire to London, passing through the northern heights at Hampstead and ending between King's Cross and Euston. The Gothic revival at this time was at its zenith, and Sir Gilbert Scott found congenial employment in elaborating the details of St. Pancras station. It is possible that he was in close consultation with the engineer who designed the spacious iron and glass roof, which is constructed on the cantilever principle. Of the characteristics of railway architecture which are allied to building it can be said that Classic is the dominant note of the North Western line from Euston to Holyhead, and in like manner from Chester to the north, with the exception of the Gothic stations of Lancaster and Carlisle. The Midland Railway in its older portions has claims to Classic status. There is the circular Round House at Leicester the delightful hotel at Derby, and the Central Station at Manchester. From Bedford to London the characteristics are Gothic. Perhaps Sir Gilbert Scott had in mind the churches he was repairing, and wished to give Londoners a vision of Gothic splendour which could be obtained by those who preferred the Midland route. The engineers, however, true to railway practice, preferred Classic for the tunnel front. The last railway to enter London was the Great Central, which from Aylesbury runs parallel with the old Metropolitan. In course of time the Eastern Counties became the Great Eastern. Numerous small companies of cross-country importance were bought up by the great systems, and finally the railways which had a definite place both by reason of nomenclature as well as peculiarities of design in buildings and rolling stock have been

re-grouped. We shall soon be able to state a man's age by hearing him refer to railways by their old names.

Having sketched an outline of English railroad history, it remains to write of the architecture and the lessons to be learnt from the study of works which have the merit of being unique in design and proportion. Brunel's bridge at Saltash, completed in 1859, has no claim to beauty. The timber viaducts of Cornwall disappeared with the broad gauge, but the stations of Menheniot, St. Germans and Liskeard evidence the fact that design was considered by the old engineers with pleasing results. There is the tubular bridge across the Menai Straits with its pylons and crouching lions. There is the suspension bridge of Conway which composes so well with the mediæval Castle. There are the mechanic's houses at Tring, the station at Reading, the Round House at Chalk Farm, and the bridge at Denbigh Hall, as well as the high level bridge at Newcastle to prove the Victorian engineers to have been men of ability. Who has not enjoyed the sight of the railway stations at Dublin, of which the Broadstone, by Mulvany, is the most convincing, or the ornate station at Kingsbridge, by Sancton Wood. Such features have an air of solidity which, apart from architectural embellishment, commands respect. There are such railway hotels as the one at King's Cross, or the fine building at Galway. It is, however, that rare instinct for construction which distinguishes the line of the railroad, such as the viaducts, the bridges, and vast embankments. We may have an affection for the station at Huddersfield, or the façades at London-road, Manchester. We are enthralled by Dobson's loggia at Newcastle, but the Royal Border Bridge at Berwick and fleeting glimpses of impressive tunnel entrances prepare us for the intricate weavings of steel lattice spans or the marvel of the Forth Bridge. America has shown how the railway station can take on the character of a Roman Bath

or become a Hall of the Cæsars. By comparison the English stations are Liliputian in scale, but it must not be forgotten that England was the pioneer in such matters, and that we are still privileged to enjoy early railroad enterprise. Familiarity has made us contemptuous of works which eighty years ago were regarded as marvels of science. Few there are who bestow more than a passing thought on the conventional scenery of the iron road which carries them on their travels. It is somewhat curious that the steam engine and the railroad which our forbears envisioned as suppressing road travel for all time should now be approaching the stage of obsolescence. There is much food for reflection on the part of architects regarding the permanence and structural qualities of the buildings referred to in this article. They are interesting as showing a compromise brought about between eighteenth century tradition and Victorian invention. For over eighty years the majority of these buildings have been described in the pages of *The Builder* with all matters relative to their construction and cost, as well as accounts of accidents and disasters attendant on the days of experiment. There is material for many books, as well as examples of structural design which embody the first principles of architecture. It is towards the best of such works that attention is directed. Perhaps the antiquary of the future will devote his time to compiling a comprehensive account of railroad travel with the same zest that has been given to the history of coaching by others.

Examination for the R.I.B.A. Diploma in Town Planning.

The questions set at the recent examination for the R.I.B.A. Diploma in Town Planning are obtainable at the R.I.B.A., 9, Conduit-street, W.1, price 6d. per set.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Manchester Art Gallery Competition.

SIR,—Surely Mr. Adams' letter, published in your last issue is the inversion of wisdom and justice. Not a few are of the opposite opinion as to the merits of the selected design.

It is not necessary—indeed it is wrong—to suggest fraud when "self-misdirection" (as in the case of the judicial bench appeals) meets the case.

A. HENTHORN STOTT.

Manchester.

SIR,—I should like to support the view taken by Mr. Maurice B. Adams. No doubt it is very galling, after having attempted to fill conditions in good faith, to find that the winning architect has ignored some of them—even vital ones; but surely what we all wish is that the best design should win, not that one less meritorious should be selected in order slavishly to keep to rule. It would be absurd to foist an inferior building on to the public with such an excuse, and an assessor who did so would be more culpable than the toleration of broken conditions could make him. It seems to me that conditions generally are far too complicated. A simple statement of cost, site and accommodation, with a photograph of its vicinity, seems all that is required. The complicated and iron conditions sometimes made now really mean that the competitors are making the assessors' design and not their own.

I fear such letters as have appeared lately in the lay press by disappointed competitors must do great harm to the profession. I think most independent architects who thoroughly examined

Downside Abbey, near Bath: Plan of New Nave. SIR GILES GILBERT SCOTT, R.A., Architect.

the drawings submitted, would support the assessors by evidence if it were required. In my opinion, the award, so far as the winning design was concerned, was made conscientiously and courageously in the best interests of architecture and the public who are finding the money.

Manchester.

J. HEMEROW.

Architectural Competitions.

SIR,—Some of your correspondents appear to hold the view that, so long as an assessor selects a fine design, it is the duty of each and all to accept his award in silence, notwithstanding the fact that hard-and-fast conditions have been flagrantly broken.

The climax is reached when Mr. Maurice B. Adams, an architect and journalist of great experience, states that if a competition produces a fine design any protest by competitors is deplorable. If such protests are mere quibbles, Mr. Adams is right, but he is laying down a most extraordinary doctrine if he means that competitors have no right to protest when important conditions, materially influencing the planning, are broken, and they realise that weary weeks of work have been wasted by adherence to the rules. Mr. Adams does not seem to realise that an architectural competition is, first and foremost, a plain business transaction between the promoters and the contestants, with an assessor appointed to see that, as far as is humanly possible, all those interested get an absolutely fair run for their money.

If the promoters, or their assessor, lay down hard-and-fast rules, and subsequently find that one of the designs submitted, by ignoring them, proves they have made a grievous blunder in so doing, that certainly does not give their assessor the right to select it. By so doing he commits a direct breach of contract, and in the interests of everybody concerned it is surely quite time the Institute took a hand to prevent such happenings.

In recent years there have been more instances than one of the winning design breaking conditions that were an obvious handicap to those adhering to them, and in each case the "Answers to Questions" have, moreover, refused any relaxation with regard to the point at issue.

This is a most unsatisfactory state of affairs, and if the Institute, instead of censuring protestants, would censure assessors who do not "play cricket," or, better still, see they do not get a second chance of ignoring drastic regulations, foolishly laid down at the outset, it would at least be a step, if only a step, in the right direction.

JUSTITIA.

Right of Light.

SIR,—With reference to the article on "Right of Light," in your last week's issue, I am particularly interested in the *résumé* given of the case, *Wills v. May*, in that I was called in on behalf of the plaintiff to give evidence as to the potential value of the site.

The important point allowed by the findings of the Court was that, although the two openings actually interfered with by the defendant were quite small, yet their position prevented the defendant building within a certain distance—thus allowing any future buildings erected on the plaintiff's land a very considerable amount of light from the side in addition to the front.

It was argued that the deprivation of this side light reduced the annual rental value of these potential buildings, and the amount of damages was assessed on this basis. Although it was proved that the damage would not be realised by the plaintiff until the termination of an existing lease (a period of fourteen years from the time of the hearing), the Court held that the plaintiff was entitled to an immediate payment of such a sum as invested for the period of the unexpired lease would produce the full amount of the damages.

Downside Abbey.

We illustrate this week some working drawings of the new nave of Downside Abbey, near Bath, designed by Sir Gilbert Scott, R.A. Photographs of the interior of the nave were reproduced in our last issue, when a short description of the work was also given.

Manchester Art Gallery Competition.

The fourth premiated design in this competition, by Messrs. Warman & Sinning, is illustrated this week. The winning design, by Mr. Ernest Berry Webber, was published in our issues for June 12 and 19 (a special criticism of the competition appearing in the latter issue), the second premiated design, by Messrs. E. Maxwell Fry and G. L. Owen, in our issue for June 26, and the third premiated design, by Messrs. A. W. S. & Kenneth M. B. Cross, in our issue for July 24.

Competition for Development of Lands and Fortifications at Valetta and Floriana, Malta.

The conditions of this international competition (in which, as we have already announced, the scheme submitted by Messrs. James Burford, A.R.I.B.A., and S. Rowland Pierce, has been awarded first place) required the inclusion of the following principal works:—(a) The lay-out of streets, gates, squares and the allotment of sites for the erection of high-class grouped dwellings and detached villas where suitable, on the lines of modern garden suburban development, also workmen's dwellings and industrial and other buildings; (b) the improvement of the main approach to Valetta from Floriana and of the surroundings of Porta Reale; (c) the assignment of a convenient site for a first-class modern hotel, to accommodate 200 guests, with possibility for extension, with provision for a garden, recreation grounds, garages, &c.; (d) site for the erection of new Courts of Justice, such site to be as near as possible to Porta Reale; the new Courts Building to provide accommodation for the following: Superior Courts, Courts of Judicial Police; Court for Juvenile Offenders; Prisoners' Lock-up; the Government Notary's Office, Public Registry and Notarial Archives Offices of the Order; Offices for Legal Practitioners. (Detailed requirements were set out in a special Schedule.) Certain of the main bastions of Valetta and Floriana were required to be kept intact or to be opened up to give effect to improvements of the gates, &c., whilst an indication was given that other fortifications on account of their historical interest should be preserved as far as possible.

All military properties were required to be

left intact, with adequate accesses thereto from new or existing roads. Competitors were allowed to contemplate the acquisition by the Government of private property where necessary to give effect to their schemes. The winning scheme is illustrated in this issue.

The assessors were Mr. Edward P. Warren, F.S.A., F.R.I.B.A., and Professor Patrick Abercrombie, M.A., A.R.I.B.A.

The Adam Room at Wembley.

THE Adam Room at this year's Wembley Exhibition is designed to give an idea of the interior architecture of Robert Adam (1728-1792) at a date as near as may be to the mid-point of his great career. The Adam Room is not a copy of any particular interior, but represents the way in which a room of the fixed dimensions of 24 ft. width by 36 ft. length and 15 ft. height may be treated in accordance with his ideas of proportion, decoration, and colour. The figures in the room represent Dr. Johnson, David Garrick, Fanny Burney, Mrs. Thrale, and Boswell. They have been made by Louis Tussaud & Co., and the valuable costumes have been lent by Tom Heslewood & Co. These are historical, having been made for some of Henry Irving's sumptuous productions. The wigs have been lent by Birts; the furniture by Harris, of New Oxford-street, and china and glass by Messrs. Powell & Son & Wedgwood, Ltd.

The room itself has been entirely constructed by Mr. Laurence Turner from the architect's detail drawings. The only features which are actual reproductions are the three medallions on the ceiling, from examples in Sir John Soane's Museum, the small medallions on the walls and the cornice, which are from an Adam house in Portland-place, and the bas-relief on the mantelpiece tablet. Everything else has been specially modelled from the drawings. The carpet has been woven, from the architect's full-size coloured repeat, on handlooms at Wilton by the Wilton Royal Carpet Factory, who have a tradition of two hundred years of making carpets of this character. The five panels on the walls, giving an idea of the tapestries that were used in Adam houses, have been painted by Mr. Alfred C. Conrade. Five of the masterpieces of Robert Adam are represented, i.e., the Adelphi Terrace (over-door panel), the Bridge of Syon, the Portico at Osterley, the Record Office, Edinburgh, and the Fête Pavilion of 1774 at Epsom. The mirrors on the walls and in the lunettes have been supplied by Messrs. Pilkington. The Verde Antique marble slabs for the two console tables have been lent by Messrs. Burke & Co. of Rathbone-place, and the legs and ornaments of the framework in cast iron and white metal have been made from the architect's details by Messrs. Thos. Elsley, of Great Titchfield-street, who have also lent the steel gate and fender. The vases have been lent by Wedgwoods. The honorary architect is Mr. Arthur T. Bolton F.S.A., F.R.I.B.A., of Lincoln's Inn Fields.

Dana's Character of Performance

A technical drawing of a rectangular frame. It consists of two vertical bars and two horizontal bars. At each of the four corners, there is a cross-section symbol, which is a small square with an 'X' inside, indicating a specific material or joint. The drawing is a line drawing on a light background.

AREA FOR EXPLOITATION.

Areas open to exploitation are shown in a dark tone with vertical hatching; military properties which could not be interfered with and to which free access had to be maintained are marked by horizontal hatching; private property is shown white.

THE TOUCHSTONE OF ARCHITECTURE*

UNDER this title Sir Reginald Blomfield has collected eleven of his addresses and essays on architecture and kindred subjects. Some of the addresses to various societies date back to 1912, and the fact that they read as well to-day is a sure indication that the ideas expressed are not ephemeral, but are the result of a clear and carefully-balanced judgment. From a literary point of view we personally prefer the pure essay, as literature, to the address as it appears in book form. That these addresses stand the test as well as they do is a tribute to the author's fine literary craftsmanship, and with the exception, perhaps, of some of the Earl of Oxford and Asquith's addresses, we can think of no contemporary writer whose addresses read better than these in this collection.

The first two addresses deal with art training and teaching in relation to the artist, the amateur, the craftsman, or the State, and some interesting issues are raised. The Royal Institute address on "Famous Men" deserves to be recorded here in permanent form, and the address on "The Outlook of Architecture" revives our memories of the friendly strife carried on between the author and that clever critic, the late Mr. March Phillipps. An interesting point to us is the suggestion that "the rise of Gothic architecture is a tremendous example of atavism, a throwback," but we are not certain about this, taken in conjunction with an earlier suggestion that "Romanesque architecture was the last thin echo of the classical tradition, rather than the voice before the dawn of mediæval art." If there is a connection between Classical and Romanesque architecture we had always assumed (carelessly, perhaps) that the connection between Romanesque and Gothic architecture was accepted as being a fairly logical development. The whole theory of atavism in art is intensely interesting, particularly to those in search of origins to support or justify an architectural credo. Surely nothing finer has been written in the way of art criticism—particularly criticism of painting—than that contained in "The Tangled Skein." Sandwiched amongst the addresses are essays on Greek architecture, and Christopher Wren. They are fine examples of the carefully-prepared written essay, and undoubtedly they will remain as distinct contributions to the literature of architecture.

The development of Greek architecture, and an examination of the spirit underlying it, are carefully analysed. We confess we have the feeling that the aim and outlook of the Greeks was limited; that the vocabulary or language was limited; and that the manifestations of life to be interpreted into architecture were limited. Perfection of beauty was there undoubtedly, but we feel we would like to hear from the author how the Greeks would have interpreted our complicated form of civilisation, or, failing that, how we ought to interpret our inheritance from the Greeks. Abstract beauty, the æsthetic appeal, the utilitarian appeal, and the purely utilitarian appeal, are idioms of expression, but super-cinemas designed in Neo-Grec meet us everywhere. In fairness it ought to be said that some of the questions relating to technique and abstract beauty reveal themselves in the subsequent essay on Wren. Very rightly, we think, the significant fact has been stressed that Wren did not receive any specific training in architecture, yet we fully share the belief that Wren was, "on the whole, the greatest architect known to history." The sound, balanced judgment and resource of Wren, despite the faultiness of his architectural technique, leads to some interesting conclusions by the author upon the training of architects and the importance of general education in relation to specialised training.

"The Touchstone of Architecture" covers a wide range of subjects which have all been approached from the point of view of architecture, and within the reasonable bounds of a book review we can only indicate the range and scope of a very excellent book, and a welcome addition to the literature of architecture.

PHILIP WEBB AND HIS WORK—VIII

By W. R. LETHABY.

VIII.—WEBB AND OUR HISTORIC MONUMENTS.

It is sad to think that our children's children will not be able to see a single genuine ancient building in Europe.—W. Morris, 1878.

In 1845 Ruskin, aged 26, wrote from Pisa to his father: "The wretches have put scaffolding up round the Baptistry, and are putting modern work of the coarsest kind instead of the old decayed marble. I do believe I shall live to see the ruin of everything good and great in the world, and have nothing left to hope for but the fires of judgment to shrivel up the cursed idiocy of mankind." In 1848, writing from Abbeville: "... All the houses more fantastic, more exquisite than ever; alas! not all, for there is not a street without fatal marks of restoration. . . . I seem born to mourn over what I cannot save." Again in 1848-9 he wrote in *Seven Lamps*: "Do not let us talk of restoration. The thing is a lie from beginning to end."*

Ruskin's understanding of what was implied by the word restoration passed with the *Seven Lamps* to Morris, who in 1855, writing of a visit to Ely, says: "It is so horribly spoilt with well-meant restorations, as they facetiously call them." In the same year, writing from France describing the church of Dreux, he tells of "a transept very elaborately carved once, now very forlorn and battered, but *Deo gratias* not yet restored" (Mackail, I., p. 75). Morris said of the cathedral of Amiens that it was not only the most beautiful, but "the kindest and most loving of all buildings"; of Rouen he recalled "what a wonder of glory that was to me when I first came upon the front of the cathedral rising above the flower market." No other man ever loved old buildings as Ruskin and Morris did—except Webb.

Our fathers have laboured, and we have entered into their labours to alter and destroy. The churches where the forefathers of the villages sleep have been made smart with flashy brass, glass and tiles, and our cathedrals have been bedizened. Loyalty to the ancient things of the land became part of Webb's central soul-self—his religion.

Probably without a drawing oneself up to think, "it might be so"; it will be impossible to imagine this deep reverence for building as a primary art and near necessity of life. An old house or church is a human nest built with hearts even more than hands—the hearts of ancient men in the land. The destruction of a living building was a sort of murder. "You see, it's my grandmother," Webb would say. The operations of restorers he once called "ruthless refinements of cruelty by make-believers." Architecture was a folk art, having a common tradition behind individual whims and wills, and shaped by the very nature of things—a revelation of humanity.

It was not only the cathedrals and great things which Webb revered: the unconscious folk art of the land touched him even more. Of a Sussex church he notes: "Saw the old church had been a magnificent one of the homely kind; interesting beyond expression, but bedevilled in purely unconscious devilry."

If England were a little land, and its treasure of old buildings limited, every loss involved the writing off of a percentage from the stock. This yearly destruction of a diminished store cannot long go on. When Webb first looked round, the proportion of old buildings to new was probably something like 90 per cent.; now the proportion must be the other way about.

Beyond the downright loss by destruction a

* In January, 1855, the President of the Society of Antiquaries referred to some proposals which Mr. Ruskin had made to the Society to establish a committee for the preservation of ancient monuments. He was prepared, under conditions, to subscribe £25 a year.

specially specious attack labelled "Restoration" was in his time developed and worked up to fury. By this means an old building could be tricked out to appear like a new thing provided by contract from the best London shops—a Saxon or Norman church might be made to look as if it had been gone over by machinery, and the people loved to have it so.

It is impossible to give any notion of the violence and stupidities which were done in the name of "restoration." The crude idea seems to have been born of the root absurdity that art was shape and not substance; our ancient buildings were appearances of what was called "style." When the architect had learned what his text books taught of the styles he could then provide thirteenth- or fourteenth-century "features" at pleasure, and even correct the authentic old ones. Professional reports would run: "The Tudor roof is incongruous with the Early English chancel arch, and it should be replaced by a thirteenth-century roof of steep pitch." At Canterbury a wonderful twelfth-century tower was destroyed to put in its place a nineteenth-century "fifteenth-century" erection. At St. Albans eleventh-century and fifteenth-century work were both destroyed to satisfy the whims of a lawyer-lord. It never struck any one that antiquity is being old. The beautiful word "Restoration" covered all up, and it must be confessed that we find we can do much the same things under the titles of repair or improvement.

The bandying of catchwords seems to have prevented the experts from seeing that a name was not the same as a thing, that you could not have an ancient building put up to-morrow, that age and authenticity are essentials of historical art, and that weathering and the evidence of age are necessary for our reverence. What we call a pyramid might be built at any time, but it would not be the Pyramid. What architects still to-day go on calling a "Gothic window" can be supplied by any stonemason, only it is not Gothic.

A practice of producing professional office-made versions of the art of any century which passed as the art itself was at full blast when the much-hated, much-revered Society for the Protection of Ancient Buildings was founded by Morris, Webb and Faulkner.

The formation of a society to oppose the thoughtless destruction of our antiquities seems to have occurred to Morris in 1876—that is exactly fifty years ago—and it was actually founded in April, 1877. In his account of the Society, Dr. Mackail quotes the greater part of the preliminary statement issued by the Society; the rest is given here.† "It is said

† The whole is printed in the Annual Report, 1917, with a valuable index of the buildings considered by the Society.

to say that in this manner most of the bigger Minsters, and a vast number of more humble buildings, both in England and on the Continent, have been dealt with, by men of talent often, and worthy of better employment, but deaf to the claims of poetry and history in the highest sense of the words. For what is left we plead before our architects themselves before the official guardians of buildings, and before the public generally, and we pray them to remember how much is gone of the religion, thought, and manners of time past, never by almost universal consent to be restored; and to consider whether it be possible to restore to those buildings the living spirit, which, it cannot be too often repeated, was an inseparable part of that religion and thought, and those past manners."

The first annual meeting was held June 21, 1878. Among the original members of the large committee were Carlyle, Ruskin, James Bryce, Sir John Lubbock, Lord Houghton, Aldis Wright, Leslie Stephen, Mark Pattison, Coventry Patmore, Ingram Bywater, Charles Keene, Holman Hunt, Burce-Jones. Two members at least, Mr. F. A. White and Mr. J. P. Heseltine, still remember these far-off days. The nucleus of the Society was formed by Morris, Webb and Faulkner; the committee meetings were for some time held in the Oxford-street showroom. Mr. White remembers this, and that he was rather frightened of Morris. Morris was the sole secretary for a year or so, and the address of the Society was at the works, 26, Queen's-square. Webb, as a trained architect with a special turn for the details of building procedure, necessarily did much to shape the Society. "That the Society has become established is largely due to Webb's pioneer inflexibility."

A few sentences may be quoted from the first annual report, which was certainly written by Morris, the originator and secretary of the Society. "The Committee cannot but regret, considering how widely-spread and rapid has been the destruction and falsification of our ancient monuments during the last twenty years, that some such society as this was not long ago called into existence; a society with the principal aim of guarding the life and soul of these monuments, so to speak, and not their bodies merely; a society that might have impressed upon the public the duty of preserving jealously the very gifts that our forefathers left us, and not merely their sites and names. . . ."

A letter received from Mr. Thomas Carlyle which was read at the meeting will be quoted here for its own sake and because it applies to the same violence towards our City churches of which we hear to-day.

"I can have but little hope that any word of mine can help you in your good work of trying to save the Wren churches in the City from destruction; but my clear feeling is, that it would be a sordid, nay, sinful, piece of barbarism to do other than religiously preserve

Forthampton, near Tewkesbury.

Tower of East Knoyle Church.

style, the growth of our own times, but connected with all history. . . . I believe that then the little grey, weather-beaten building, built by ignorant men, torn by violent ones, patched by blunderers, that has outlived so many hopes and fears, of mankind and yet looks friendly and familiar to them—I believe that they will honour it the more for the many minds and hands of men that have dealt with it, and they will religiously guard it as a holy symbol of all the triumphs and tribulations of art—of art, the constant companion and expression of the life and inspiration of the world."

Mr. Thackeray Turner, the second secretary, answers an inquiry for memories of the early days of the Society: "Turning my thoughts to the S.P.A.B., the first thing that impresses me is the regularity of Webb's and William Morris's attendance. One thing I noticed was that Webb never questioned anything said by Morris; whereas Morris would question Webb's views. When Morris was present it was always he who first spoke about a case and proposed what we should do, but when he was not there Webb took this position. On one occasion, disagreeing with what he wanted to do, the discussion was put off till the next meeting, when Morris was present. When he had heard both sides he said he considered I was right. The next morning Webb walks into the office and said: "You were quite right in disagreeing and in upholding your own views." He, a busy man, had left his work and come all the way down from Gray's Inn to Buckingham-street to do what most men would say was a distasteful thing. I think it impressed me more than any of his acts, although it seemed to me a very great kindness, the way in which he constantly came to see me when I was ill in St. Thomas's Hospital. I suppose few men had a kinder heart than Philip Webb. George Wardle was a very regular attendant at the committee meetings. Webb seldom visited buildings for the Society, but he showed keen interest in my notes." Mr. Turner adds: "I used to show him my designs and call upon him, when we had most interesting talks about building materials and construction. His knowledge on these subjects was wonderful."

Morris, in the early years, visited buildings for the Society—which perhaps was hardly tactful! At one cathedral, on having some commercial work of stalls shown to him, in pride he burst out: "Why, I could carve them better with my teeth." A Canon of . . . on pointing out 'improvements' he wanted in the Cathedral, was answered: "The place is not good enough for you." After a painful visit to . . . Church, which was being skinned alive, he rushed to the window of the inn shaking his fist as the parson passed by.

Webb, too, felt the wrong of it all, and in a letter before me, written after his retirement, he speaks of the ruthlessness of but a small part of the English folk deciding on what the mass of the people are to lose. . . . "It is monstrous to take away their birthright of beauty without so much as the 'by your leave' of the railway porter." Morris wrote in 1881: "As to Anti-Scrape I have little comfort . . . the destruction is not far from being complete already. . . . Certainly to take the trouble it is needful that a man should be touched with a real love of the earth—a worship of it—no less."

In 1889 Webb wrote to Sir Hugh Bell in regard to a question concerning the 'restoration' of York Minster. . . . "Hundreds of thousands of pounds have been expended on the Cathedrals, the full half of which money has been mischievously used . . . in applying incongruous decoration, wholly unfitted to the grave and wonderfully beautiful remains of our dignified art, when the fabrics called for the application of the whole of the money. . . . It is but little understood amongst architects how serious a matter it is merely to repair and solidify an ancient building, which so often is just in a state of equilibrium in

many of its parts, and requiring attentive watching as each stone is lifted or additional weight laid on. . . . It should never be forgotten that dealing with an ancient structure, in the way of sustaining and repairing it is a wholly different matter to building a new one: 'new wine put into old bottles' is a faithful warning."

On a discussion with an architect in regard to putting new figures in old niches, he wrote:

" . . . The other item in your letter is a serious one, and I am considerably disappointed, there is no doubt about that; for it seems to me to be not so much a difference of opinion which we can allow for, as loose reasoning on your part, and the flower-pot illustration is not illustrious. However, if you will nail your colours to the mast we must grin and bear it without malice and go a tip-toe over the pimples. . . . Forgive me for this grumbling, but rage must rule me.—Yours truly though grimly, " PHILIP WEBB."

" To the Committee of the Ruskin Memorial (Westminster Abbey) Fund.

" Gentlemen,—On first learning that a proposal would be made to place a memorial in the Abbey Church of Westminster of John Ruskin the suggestion seemed to me as of the mere restlessness of rather thoughtless people, and that it would surely die away from want of the consent of those most intimate with the life-long efforts of one of England's most faithful teachers. Not only did he show the way with unequalled literary force how ancient buildings should be guarded from mutilation and unseemly addition, but he was in close touch with other able men who also denounced the modern practice of so using such relics set up when the arts were part and parcel of the sincerity in the outward expression of religion. William Morris, who with equal knowledge laid bare the falsity with which works of ancient art were being defaced from ignorance of their inestimable value, spent a large part of his life striving to stay the ever-growing mischief of such processes of degradation as that of loading the surface of their incomparable walls with the incongruities of this age. It would be quite contrary to all I have gathered from the teaching of such men to in any way allow that my name should be used in furtherance of such a scheme as that put before me. We can in no way add honour to the name of John Ruskin, but surely we may avoid as far as possible the lowering of our own in the eyes of our descendants. It is with regret that necessity forces me to write in this way in answer to your appeal, but personal regard for members of your committee would be no excuse for my hesitation at such a moment."

Webb wrote several reports on old buildings for the Society. Among his papers are some notes on those along the Thames, which make part of the background of Morris's "News from Nowhere," and these may be quoted here as suggesting what the two friends saw in the humbler old buildings of England.*

" Great Coxwell Barn, Berkshire," said by J. H. Parker in his "Architectural Topography of England" to be 'Decorated,' but possibly of the end of the thirteenth century. In Murray's Handbook (1860) it is said to measure 148 by 40 ft., with walls 4 ft. thick. W. M. held that the barn was attached to Faringdon Abbey. This noble barn had great hold on W. M.'s imagination. Before I had seen it, and having seen many mediæval barns, I laughingly scorned his determination that it was the most wonderfully beautiful example in England. When at last he exultingly carried me to it (almost tremblingly for fear of my judgment) I was obliged to agree with him that it was unapproachable in its dignity. I clearly understood in this case as in others that his insight and judgment were unfailingly right. The barn surely touched him in this way: one turned up a narrow lane off the high

* Part of these notes printed in Morris's life are here omitted.

these churches as precious heirlooms; many of them specimens of noble architecture, the like of which we have no prospect of ever being able to produce in England again." The report proceeded, commenting on this letter:

"We do find it strange indeed that the richest country and city in the world grudges to the arts the few feet of ground that these ancient monuments occupy. . . . These buildings are nearly all doomed, and are coming down, church after church. . . . We have met with a tendency to saddle on us an undue regard for certain forms of art. We desire to declare emphatically that the Society neither has the will nor the power to enter into any "battle of the styles," and it counts amongst its members persons of every shade of artistic opinion. Our enemies are the enemies of the works of all styles alike."

"In the past years protests have been written in about forty instances of contemplated restoration or destruction. Members of the Committee have reported after personal visits in many cases. The Committee has printed a form for giving a description of a church. By this means it hopes to get a complete list of unrestored churches. Mr. Coventry Patmore has suggested the publishing of a pamphlet to be made up from the materials so collected, and has offered £10 towards a fund for the purpose. The Committee has information of 749 quite unrestored churches in England and Wales." Of the churches in south-east England: "The county of Surrey has suffered most; Essex (a county of small churches) has perhaps suffered least; and Norfolk may be set beside it." A sub-committee met in October, 1878, to report on the best way of transacting the business of the Society. In November an office was engaged at 9, Buckingham-street, Strand, and Mr. T. Newman Marks became secretary for a few years.

In the subsequent Reports are several papers and speeches by Morris, and I must quote, from a speech of 1879, a passage on how any ancient building which survives present dangers may be regarded in a better future. "The workman of to-day is no artist; it is the hope of my life that this may one day be changed; that popular art may grow again in our midst; that we may have an architectural

road, when the ridge of the mighty roof (no exaggeration) rose foot by foot over the grassy bank till one got over the top of the knoll, when its whole impressiveness was clearly seen, so large in its lines as to make one draw breath sharply with wonder. There it was, dominating the farmhouse adjoining, and with nothing but the simple fields of Berkshire about them. Its magnitude, nice precision of building and dainty parts of pure architecture, all done in handsome freestone, made it as beautiful as a cathedral, but with no ostentation of building whatever: a perfectly suitable barn, and nothing else. The workmen who set it up did it well once and for all time, if only the modern British devil will but let it alone. If I saw what it all meant in the quiet Berkshire landscape and its clear history of the builders and their craft, how much more must he have seen into and round it? This building and all of its like, were infinite delight to him. The inside of the barn, with its forest of orderly-set oak timbers, answered perfectly to the outside. I need hardly say my sympathy disarmed him, and he never again twitted me with my scepticism. Perhaps I have said more than was necessary about the impression made on me, but it seemed—I knowing my man so well—it might throw some useful light on his aptitude in the clear perception of the essence of such things.*

"I was never inside the church, though I well remember W. M.'s amusement at the name on the brass. In Parker's topography (as aforesaid) there is the following notice of the brass in the church: "There are two brasses, *circa* 1500, one to William Morys somtym fermer of Cokyswell." Parker gives it in the modern form of black letter, but he does not mention what the other brass was, which is the way of these historians—they leave off when they should go on, and go on when they should leave off.

"New Bridge" over the Thames, between Kingstone Bagpuse on the Berkshire and Witney on the Oxfordshire side, and about half a mile south of Standlake. So far as my memory serves, I set the bridge down as being of the 13th century. Radcot bridge, higher up the river and carrying the Faringdon and Burford road (the place of the battle in 1387), with which I was more familiar, I thought was of the 14th century.

"As to my visit to 'Kelmscott' the first time, I find some difficulty in separating it from the many others. Of course, the house and surroundings came home to me at once, and doubtless in much the same way, allowing for the weaker vessel, as they did to W. M.

"There can be no doubt that the house and its surroundings, and the village and the characteristic parts of the two counties divided by the river, were a great gain to W. M. as a retiring place, in which he could gather himself together from the degrading external influences of modern life, for here the round of the day in each season was free from artificiality. . . .

"Each inevitable new element of change had tenfold brutal force in its vulgarisation from the collected purity and simplicity on which it was settling down. Even the little church, which should have been protected [if only] by neglect, suffered notwithstanding all his efforts under the torture of stupid mis-handling.

"Though necessarily in a feeble way to that in which it laid hold of W. M. when first alighting on this fragment of country the effect was the same in quality to me. No one sees more surely than I the great literary gain

to 'News from Nowhere' which could not have been written to its pitch of verity without the impressive reality of that piece of almost unsullied countryside on the banks of the Thames. To both of us the pulling down of the noisome chimney-stack over the water at Buscot, attached to the beet-sugar speculation there, gave great satisfaction, and we drank to a reformation of manners in the future. Alas! the drinking was not sufficient in quantity."

The order of the Committee meetings of the Society was, and is, to meet at 5 o'clock on Thursday afternoons and work through a series of 'cases in progress,' receiving reports of visits to buildings threatened or attacked, and deciding on further action. After a time it settled on one's mind that every day something was being subtracted from the limited stock of authentic historical buildings in England and that nothing much could be done. After the meetings, about 7 o'clock, a group consisting usually of Webb, frequently of Morris, and of some younger members, Walker, Cockerell, Gimson, and others, would go across the Strand to Gatti's for a simple meal, where we were welcomed by a kindly old waiter from Bellinzona whom we identified as "Ticino." Here talk flowed.

I will now try to set down the main points in the body of belief held by the S.P.A.B. as expounded by the founders.

Ancient works of art are valuable national possessions; they hold intellectual and spiritual values which are necessary to fine types of life. Old buildings are, as Morris said, "wonderful treasures all the more priceless in this age of the world, when the newly invented story of living history is the chief joy of so many lives." The England that we love is the England of old towns, tilled fields, little rivers, farms, churches and cottages. If by violently marring the fair country and vulgarising the shy old buildings we obtain so much less to love, what shall it profit? Without an England to love we cannot remain stout of heart and enduring. Civilisation cannot be had merely as a word—it rests on foundations.

To some minds antiquity itself has a claim on their reverence and the marks of age are guarantees of authenticity; when once assurance is gone an ancient work of art is practically destroyed. To paint and sell sham Raphaels is forgery, and it should be recognised that to design and execute sham parts of buildings in association with the real thing is a fraud. Where an ancient building has inferior or less ancient parts, such parts are at least older than anything we can order to be done, and they are little disturbing, for we easily recognise them for what they are. It is wise to carry all forward together; there is one beauty of homogeneity and another beauty of complex accretion. To maintain continuity is the only proper policy. A building ceases to be ancient in the degree in which it is renewed and additions are made to it. If, however, additions must (as we say) be made, they should be as unobtrusive as possible and frankly modern. Minor repairs which are workmanlike and obviously protective may almost give additional pleasure. The best repair is a sort of building surgery which aims at conservation. A building properly cared for will be all the more lovely because it bears the evidence that it is understood and valued. Such principles open up a whole new art of building conservation. A well-done unaffectedly modern piece of building cannot be offensive, and a study of old art should teach that every manner of building belonged to its own day only. Right understanding of the ancient would make us modern and produce a form of building art proper for to-day.

Such being the theory it was Webb's part to work out the practice of preservation, and this he did with ingenuity and infinite patience. When the effort is directed towards conservation much becomes immediately plain in underpinning weak walls, drawing away water, and the like. The main difficulty was how to deal with obviously weak and fractured walls

without pulling down and rebuilding. The Webb accomplished by mining into a patch of the wall on the inside and filling with strong new work, then by forming another hole next to the filled part the work could be extended by degrees in a band throughout a wall. In this way chains of blue brick in cement stonewas steel may be inserted into a shaky wall. Demonstrations were given of the admirable results to be obtained by frankly obvious supports, splittings, and neat-handed patchings. In dealing with superficial decay in stonework (and stone in smoky city atmosphere actually rots away), it was found that the application of coats of limewash was most effective in tending to heal the disease without injuring the surface. Even the broken colour 'striking through' the new skin after a week or two. It appears that in our damp, smoky atmosphere stone needs a protective surface, and limewashing has been customary from ancient times. Experiments with lime wash for this purpose were made at some repairs at Eltham Palace on the advice of the Society about thirty years ago.

The Society for many years had for secretaries Mr. Thackeray Turner, and in later days several younger architects came fully to know and to be able to apply Webb's ideas as to the repair of old structures, so that a body of tradition has been gathered which is comparable to expert practice in the care of old pictures. Indeed, Webb's method of interpinning may have been suggested to him by the practice of relining paintings.

Webb steadily attended the weekly meetings of the Society until he left London in 1900. This work became another of his loyalties, and nothing preventable was allowed to interfere with his presence. In the fifty years of his existence about a thousand buildings have been considered by the Society, many of them many times. Still the annual wastage is frightening. I remember Morris saying: "It looks as if they will see what we mean just as the last old building is destroyed." Yet it is all so plain, so needful.

ROYAL INSTITUTE OF BRITISH ARCHITECTS

The Soane Medallion and the Tite Prize : Final Competitions.

As the result of the preliminary competition for the Soane Medallion and the Tite Prize, the following have been selected to take part in the final competitions:—

The Soane Medallion.—Miss E. Scott, A.A.A.; Mr W. Percik, A.A.; Miss A. M. Hargrove, London University; Mr S. Lloyd-Thomson, London University Architectural Atelier; Mr A. D. Connell, London University Architectural Atelier; Mr T. Theo. Wills, Liverpool University; Mr H. L. Barton, Liverpool University; Mr Leslie R. Hiscock, A.A.

The Tite Prize.—Mr K. E. F. Gardiner, A.A.; Miss L. F. M. Payne, London University; Mr Robert G. Heal, Liverpool University; Mr E. F. Davies, Liverpool University; Mr A. Calvaley Cotton, Liverpool University; Mr E. B. Alexander, Manchester University; Mr G. Alan Burnett, Leeds School of Art; Mr J. Chippindale, Leeds School of Art; Mr J. Murray Ashford, Birmingham School of Architecture; Mr D. G. Walton, Birmingham School of Architecture; Mr S. H. Smith, Northern Polytechnic; Miss M. Harvey, Northern Polytechnic; Mr I. Schultz, Northern Polytechnic; Mr V. Banks.

Registration as Probationer R.I.B.A.

The Board of Architectural Education calls special attention to the fact that, except in very special cases a Headmaster's Certificate will not be accepted after October 1, 1925, and no one will be registered as a probationer of the R.I.B.A. unless that person has passed one of the recognised examinations in the required subjects. A list of the examinations recognised may be obtained free at the R.I.B.A.

* The Barn has long been famous as is shown in some verses by T. Baskerville in a topographical MS. at the British Museum, c. 1681:—

And here's a Barn built brave and high
So big and great it doth appear,
Scarce a bigger in any Shire,
Excepting Cholswell mighty hulk
May be said to be the bigger bulk,
The Barn for length is little less
Than 63 yards I guess,
With pillars and rafters all of main tree,
No saw touched them as you may see.

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

Houses Built.

Mr. N. Chamberlain informed Mr. Lansbury that the numbers of houses completed since the Armistice up to July 1 under the various subsidy schemes were as follows:—

1. Housing, Town-planning, etc., Act, 1919, and Housing (Additional Powers) Act, 1919:	
(a) By local authorities and public utility societies	172,794
(b) By private builders	39,186
2. Housing, etc., Act, 1923:	
(a) By local authorities	23,943
(b) By private enterprise	65,484
3. Housing (Financial Provisions) Act, 1924:	
(a) By local authorities	6,246
(b) By private enterprise	36
Total	307,689

The numbers of houses completed under the Act of 1923 since the date of the passing of the Act of 1924 are as follows:—

(a) Local authorities' schemes	16,380
(b) Private enterprise schemes	51,095
Total	67,475

Information was not available as to the rateable value of these houses.

With regard to houses erected by private enterprise without subsidy, returns were obtained half-yearly to March and September, and figures were only available for the past 2½ years. During that period the following houses had been entered on the rate books:—

*Not exceeding £26 rateable value... ..	117,587
*Exceeding £26 but not £52 rateable value... ..	37,934
*Exceeding £52 but not £78 rateable value... ..	5,045
Total	160,566

*Read £35, £35-£70, and £70-£105 for London.

The 1923 and 1924 Acts.

Mr. N. Chamberlain informed Mr. T. Thomson that on July 1, the numbers of houses completed under the Housing Act of 1923 were 23,943 by local authorities and 65,484 by private enterprise. The corresponding figures under the Act of 1924 were 6,246 and 36 respectively. The numbers of houses in course of construction under the Housing Act of 1923 were 11,214 by local authorities and 31,593 by private enterprise. The corresponding figures under the Act of 1924 were 19,196 and 227 respectively. The total number of houses authorised under the Housing Acts of 1923 and 1924 were 219,651 and 68,681 respectively.

Wooden Houses.

Mr. N. Chamberlain informed Mr. Lougher that he had no exact record showing the number of local authorities who were actually building wooden houses. In a case which had recently been before him the houses were of the non-parlour type with three bedrooms, costing about £450, and he was advised that the form of construction was satisfactory.

Building Trade Unemployed.

Mr. Betterton, Parliamentary Secretary to the Ministry of Labour, informed Mr. H. Williams that on June 22 the number of building trade labourers whose unemployment books were lodged at Employment Exchanges in Great Britain was 20,435.

The Surveyors' Institution.

Mr. H. M. Stanley, of Messrs. St. Quintin, Son, & Stanley, has been elected a member of Council of the Surveyors' Institution, in place of the late Mr. Stanley Hicks.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—Ed.

Increase in Price of Building.

SIR,—A new building is nearing completion, and the contractor refuses to proceed with a certain variation unless the price of an item in the bills of quantities, which he considers is priced at a low rate, is increased for the additional work necessitated by variations. The R.I.B.A. form of contract with quantities was employed. Is the contractor bound to carry out the variation at contract rates? And in the event of his refusal to do so, can another contractor be employed to do the work and the cost recovered from the original contractor?

LONDON.

Parquetry Warping.

SIR,—In several cases I have noticed that parquetry becomes warped over heating pipe trenches. Can you tell me how best this may be avoided?

PERFECTO.

Hot-water System.

SIR,—In reply to this query, one could ask many questions before deciding on some points; but one can assume the household to be five persons and the height of building two stories. No. 1.—Two tanks are required, one for the cold supply to the independent boiler which should be 250 gallons at least, and another tank of like capacity for the cold services, and I suppose general purposes, as supplying w. w. preventers. No. 2 is partly answered above, and the height between tanks would be 6ft. above the tank supplying the water for the boiler for the cold services. No. 3.—The question is more or less governed by the amount of work the pump can do, and what is the draw of the pump decides where the well should be; the question of size and delivery of suction-pipe is also governed by the pump.

G. W. HARRIS.

Composition of Bronze.

SIR,—I should be glad to be informed what is the composition of modern bronze, and whether old bronze had any different composition, as there appears to be quite a difference in the texture of modern bronze, even when well weathered, and that of old bronzes.

ANTIQUARY.

Insect Nuisance.

[REPLY TO "ANXIOUS."]

SIR,—Formalin is recognised as the most successful destructor of insects of all varieties. If your correspondent would try first thoroughly fumigating the rooms with the strongest formalin fumes, the rooms being thoroughly sealed up during the process, and when opened spray all mouldings and skirtings, I feel sure that he will have greater success. It is very wise to have the rooms re-decorated, and to mix formalin with the distemper on walls and ceilings in the proportion of about 1 in 25. This will preserve the effect for a sufficient period to sicken all insects of their desire to make a home in the neighbourhood. Spraying is not sufficiently drastic in itself, and it leaves many places of refuge unaffected. Fuming can penetrate anywhere where the air can penetrate.

KILLUM.

Velocity of Flow of Drains.

SIR,—Can you tell me of any formula by which the velocity of flow of sewage in any drain can be calculated from the size and fall of the piping?

DESIGNER.

THE RATING AND ASSESSMENT BILL

THE Rating and Assessment Bill is still passing through a moulting season. When the Committee resumed its sittings on July 21 the Minister of Health announced that in view of the shortness of the time available the Government had decided not to proceed with that part of the Bill which dealt with the "Valuation of Railways and Special Properties," but that that portion of the Bill would subsequently be introduced as a separate Bill. This resolution involved the withdrawal of eleven clauses, clause 36 to 46 inclusive. Then as regards clause 57, which applies to London subject to certain modifications the Minister announced that certain changes already made in the Bill had rendered this clause inadequate, and therefore a new clause would be introduced at once which should be so drafted as to provide that the Bill should only apply to London on certain specified points. The Committee then, as reported, appear to have turned to clause 50, "Power of Assessment Committee to require returns," clause 40 in the "draft Bill," and drawn in the same terms except for the omission of the words "or reputed owner, lessee or occupier."

An amendment was introduced into this clause giving the person served with a notice 21 days in which to send the required returns, instead of only 14 days as in the Bill.

At the sitting on July 22, apparently in connection with clause 52 (clause 42 in the "draft Bill" but slightly different), relating to "Evidence of Lists," a new clause was moved by the Member for Newcastle-under-Lyme requiring that a valuation list for the time being in force should be taken as conclusive evidence as to the gross value for compensation whenever any hereditament is acquired compulsorily for public purposes or under Parliamentary powers by any statutory company, but this was ruled outside the scope of the Bill apparently on the obvious ground that rating and taxation are one thing and compensation for compulsory acquisition is entirely different and quite another thing.

A Government amendment was added to the Bill requiring (the report in *The Times* uses the word "requesting") any county valuation committee, assessment committee, or rating authority to obtain from the surveyor of taxes a copy of the annual values for the purposes of income-tax.

Clause 59 in the Bill, "Compensation to existing officers," was the subject of discussion, many amendments being moved; but it was carried unamended; and to clause 63 an amendment was moved to sub-section (4) which allows members of assessment committees travelling and subsistence expenses incurred in attending conferences held by county valuation committees, to include payment for loss of time for ordinary employment. From the discussion as reported it appears that by this was meant to those in receipt of wages; but it is unnecessary to discuss this as the amendment was defeated, but a Government amendment granting some expenses to all members of the valuation committee was carried. The report available does not state the character of those expenses, but presumably they were travelling and maintenance expenses. At the termination of the proceedings for the week clauses up to clause 66 had been considered. This is certainly not a Bill to be rushed through in a hurry, and it would, in our opinion, have been far more satisfactory if this legislation had been deferred until more Parliamentary time was available, and it could have been considered by a Committee of the whole House. The highly controversial character of the legislation is shown by the losses it has sustained, to use a military metaphor, not in a general engagement in the field but in outpost skirmishes.

THE BUILDING TRADE.

SOME OBSERVATIONS ON THE RIGHT TO LIGHT AND THE LAW RELATING THERETO.—XIV

EVIDENCES OF OBSTRUCTION.

In our sixth article we mentioned that in *Colls v. Home and Colonial Stores* (1904 A.C. 179) it had been laid down by some of the Law Lords that the test of 45 degrees of light being left was not the absolute test as to whether an obstruction would create an actionable nuisance (see per Lord Davey), although as was laid down by Lord Selbourne in *City of London Brewery v. Tennant* (1873 9 App. Cas. 212), it may properly be used as *prima facie* evidence. This rule has been applied in certain building Acts, for instance, in the Metropolis Management Amendment Act, 1862, but in cases turning on prescriptive right it has no hard and fast application, and in former articles we have explained what is the test now applied. In this connection, however, we may refer to a very recent case, *Semon (Charles) & Company, Ltd., v. Bradford Corporation* (1922, 2 Ch. 737; *The Builder*, June 23, 1922), a case we noted in our second article on the question of a claim for an extraordinary amount of light for a special purpose, because evidence of an unusual and novel character was given in that case by Mr. P. J. Waldram, who recently read a paper on the Natural and Artificial Lighting of Buildings before the Royal Institute of British Architects, which was reported in our issue for April 24, 1924.

In that case the plaintiffs were owners of a warehouse in Bradford which was erected in 1876 by their predecessors in accordance with plans approved by the defendants. The plaintiffs, in their business of wool merchants, required a strong north light for examining and matching cloth, and it was established by the evidence that the building was exceptionally well lighted and that the plaintiffs had enjoyed free and uninterrupted access of light from the horizon to the B street front for more than twenty years before the issue of the writ. There were 36 windows on the several floors facing this street, which was forty-five feet wide. The defendants proposed erecting a building 73 ft. above the level of this street, and the plaintiffs complained that this would obstruct the light to 18 of their easternmost windows. The new building would be continuous with the plaintiff's premises for a distance of 21 ft. 9 in. along the street directly opposite the two most eastern windows on the ground and upper floors of the plaintiff's warehouse, and it was conceded by the defendants that some obstruction would result to four of these windows on the ground and first floors, and it was given in evidence that the direct light cut off would vary from 33 to 48 per cent. These four most easterly windows were the only windows dealt with in the judgment. The ground-floor windows had thick hammered glass in them, and all the windows had iron grilles. The learned Judge, in commenting on the evidence for the plaintiffs, is reported as having said it was based solely on the quantum of light intercepted, and no consideration was given to the light which survived. In our sixth article we showed that what has to be considered is whether the plaintiff has been deprived of so much light as to constitute an actionable nuisance, but that it is impossible not to consider how much light is left (see per Lord Lindley in *Colls v. Home and Colonial Stores*). The Court then observed that even if the plaintiffs had made out a *prima facie* case, it was rebutted by the evidence of the defendants, and the learned Judge referred to the evidence given by Mr. P. J. Waldram, who had stated that it had recently been established that the ratio of light at any given point in a room to the sill light was constant, the sill light being the light available at the outside sill of the window from an unob-

structed horizon, this percentage of light being termed "the daylight factor." He had stated that in the case of public elementary schools there was a consensus of expert opinion that in a room where young children worked if the worst-lighted desk received 1 per cent. of the sill light the room was adequately lighted. For adult clerical work a room was adequately lighted so long as the worst-lighted working point in the room did not fall below 0.4 per cent. of the sill light, the light being measured at 3 ft. above the floor. The Court then said that applying this test to the ground floor in question Mr. Waldram's evidence had been that if the defendant's building were erected as proposed, but ordinary glass was substituted for the hammered glass, the "daylight factor" would be 1.5 or 1.6 per cent., and the lighting of the ground floor would be distinctly above the average and quite adequate for the requirements of ordinary people carrying on a business of this kind; in fact, it would be an unusually well-lighted ground floor. As to the first floor, the "daylight factor" would at the worst-lighted point be 0.8 per cent., and at another point 1.54 per cent. On this evidence the Court held that the plaintiffs had not discharged the burden of establishing an actionable nuisance, as the warehouse would remain in the enjoyment of an unusually large amount of light having regard to its locality, which was in the centre of the business part of Bradford.

Expert Evidence.

In *Cheney v. Piccadilly Hotel Company* (*The Builder*, December 14, 1907) the Court commented upon what the Judge termed the elasticity of the opinion of experts under the strain of advocacy, and intimated that in cases of ordinary difficulty only one expert witness on each side would be allowed on taxation. We do not think this rule has been applied, and, as we have shown in the above case, the expert evidence was of great assistance to the Court, but the expense attending the trial of such questions is an important consideration, and the unrestrained calling of expert evidence may lead to the longest purse succeeding through the weight of expert evidence. *Semon v. Bradford Corporation* is reported as having occupied ten days in the hearing, and in this connection we may refer to some observations made by Lord Macnaghten in *Colls v. Home and Colonial Stores* (1904, A.C. 179), which were put forward by him as practical suggestions but not as made with authority. He observed that in the times when such cases were tried by jury, the jury sometimes viewed the premises, and he referred to *Back v. Stacey* (1826, 2 C. & P. 465), where the judge had instructed the jury they were to judge rather from their own ocular observation than from the testimony of any witnesses, however respectable, and he went on to say although a judge who exercises the functions of both judge and jury could not be expected to view the buildings himself, even if he considered himself an expert in such matters, it was surprising why the Court did not more frequently avail itself of the power it possessed of calling in a competent adviser to report upon the question to the Court.

Judges, of course, can view the premises or the place in question in any action, and have frequently done so in various matters the subject of litigation, or call in assessors as, for instance, in patent actions, but the above suggestion does not appear to have been acted upon, at any rate at all generally, and the assistance of the Court by assessors would not meet with the approval of parties, except, of course, in Admiralty cases, where the nautical assessors form part of the Court to advise the court

upon nautical questions, for in such cases as relate to Light parties in order to ascertain their own case have to take expert advice in the earliest stages and act entirely according to their experts' advice on the particular facts and they rely upon their experts to present these facts to the Court. The degree of obscurity is a question of fact in each case, not a scientific question or a nautical question on which the Court itself needs technical assistance, and the parties might as well select an experienced surveyor (the expert suggested by Lord Macnaghten) to act as arbitrator, as come before a court which would be assisted on a question of fact by an assessor.

The suggestion coming from such a source must be treated very seriously, but we imagine it has not been acted upon for the reasons we have stated above, for we think it would inevitably result in the parties ceasing to have access to the Courts and being driven to arbitration.

Evidence of Agreement.

Although the case really bears upon the enjoyment of Light under agreement, a subject we dealt with in our third article, we may refer to *Ruscoe v. Groundsell* (*The Builder*, November 7, 1903) here.

The appellant was the owner of two cottages with windows overlooking land of the respondent which until 1891 had been an open yard. In that year the respondent had erected a shed in the yard in close proximity to the appellant's windows, and the appellant had brought an action in respect of the obstruction to his light. The respondent as a defence pleaded that there was an agreement in writing which prevented the appellant acquiring a prescriptive right under section 3 of the Prescription Act. The agreement relied upon was a tablet in the respondent's wall inscribed "1816. This stone is placed by John Atkin to perpetuate John Musgrave's right to build within nine inches of this and any other building." The Court of first instance held that this constituted an agreement which prevented the appellant from acquiring a right to light, but the Court of Appeal reversed this judgment on the ground that the inscription on the tablet was not sufficiently explicit to constitute an "agreement expressly made or given for that purpose" under section 3. It might only refer to the boundary and not to a reservation of a right to light.

The fact that in this case the Court of first instance held this unsigned tablet a sufficient agreement, draws attention to the question whether such agreements must be signed. In our third article we drew attention to the case *Bewley (not Bowley as there printed) v. Atkinson* (1879, 13 Ch. Div. 283), where it was held signature by a person enjoying the light by virtue of the agreement was sufficient, and in *Easton v. Isted* (1903, 1 Ch. 405), where the agreement related to a skylight to what had originally been a conservatory, the consent contained in an agreement only signed by the person claiming the right was held a bar to his claim. There seems no direct decision on the point, but, as Mr. Coombe points out in his treatise on the "Law of Light," the words in section 3 "enjoyed by some consent or agreement expressly made or given for that purpose by deed or writing" seem to imply the formality of execution in the one case and signature in the other.

Housing Schemes and Compensation for Light Easement.

Lastly, we may note the case in *re Harvey and London County Council* (1909 1 Ch. 528), which was excluded from want of space from our observations under the heading of "damages."

In that case the London County Council had obtained a provisional order under the Housing of the Working Classes Act, 1890, which was confirmed under a special Act, authorising them to carry out an improvement scheme for

certain areas in their district. The scheme empowered them to acquire compulsorily certain lands, to pull down the buildings thereon and to erect new buildings on the site. In pursuance of this scheme the Council pulled down certain buildings in Leather-lane, Holborn, and erected new buildings. These new buildings abutted at one end on No. 49, which was not included in the scheme and which was in the occupation of a Mrs. Harvey, a yearly tenant, who carried on business there. No. 49 had ancient lights on the side and rear, which were interfered with by the new buildings. Mrs. Harvey served a notice on the Council alleging that they had taken a part of her premises and an easement of light appurtenant thereto, and claimed £1,350 for the damage she had sustained. The matter went to arbitration, and before the arbitrator evidence was tendered by the administratrix of Mrs. Harvey (she having died in the interval) to show that the lettable value of the premises for the purposes of her business had been depreciated, including the average annual profits from the business prior to 1906, this evidence being directed to showing that the trade and goodwill had been affected. This evidence was not admitted by the arbitrator, and on a special case stated, the Court held that the evidence tendered on behalf of the claimant was inadmissible, and that in determining the compensation to be paid by the Council for any loss sustained by reason of the provision of the Housing Act owing to the interference with the easement of light the arbitrator had rightly held that he could not take into consideration the loss of trade or diminution in value of the goodwill.

Change of Address.

The address of the Builders' Materials Central Committee is now 215, Upper Thames-street, London, E.C.4. Telephone, Central 7076.

Lifting a Big Roof.

An interesting feat of engineering has just been completed by Mr. S. E. Moss, of Southend-on-Sea, at the Isolation Hospital, Grove-road, Chadwell Heath. Mr. Moss contracted to remove a roof over the nurses' quarter, build the brickwork 3 ft. 6 in. higher, and refix the roof, which is 180 ft. long with a span of 31 ft., and weighs about 100 tons. He decided, however, to raise the roof intact. The whole operation of lifting was carried out in one week with the aid of seventy-two lifting jacks.

Trocoll Sports Club.

Messrs. Trollope & Colls, Ltd., held their third annual sports meeting on their sports ground at Grange-lane, Dulwich, on Saturday, July 25, when about one thousand employees and their friends attended. There were also present the directors of the firm, Mr. Wallace Elliot, Mr. A. B. H. Colls, Mr. C. J. Trollope, Mr. C. C. Trollope, Mr. Fabian Trollope, Mr. E. J. Brown (of the London Master Builders' Association), Mr. J. Murray (of the Building Operatives' Society), and Mr. J. H. Thomas, M.P. The prizes were presented by Mrs. A. B. H. Colls. The lay-out of the ground in connection with the meeting was under the supervision of Mr. Hurst (Works Manager at Camberwell), who was ably assisted by a band of voluntary workers composed of employees from Camberwell. The Trocoll Orchestral Band, under the direction of Mr. A. J. Houghton, played selections during the afternoon, and dance music in the evening. The sports programme included several field events and an open relay race between Messrs. A. Vigor, Ltd., J. Mowlem & Co., Ltd., F. G. Minter, Ltd., F. & H. F. Higgs, Ltd., Holland & Hannen and Cubitts, Ltd., and Trollope & Colls, Ltd. The Championship Cup, which was presented by Messrs. Nicholls & Clarke, Ltd., to commemorate their jubilee and the fact that Messrs. Colls & Son were their first customers, was won by R. J. Clarke, of Coleman-street Branch, with an aggregate of 10 points. Mr. C. J. Trollope officiated as starter, and Mr. J. W. Horswell (Camberwell) carried out the secretarial duties.

EDUCATION IN BUILDING

Board of Education Refresher Courses.

UNDER the ægis of the Board of Education, comprehensive refresher courses of instruction for teachers of building subjects have been recently held in London. The teachers, some ninety in number, came from all parts of the country. They were quartered at Westminster Training College, and were allowed maintenance by the Board of Education during a fortnight's instruction—from July 20 to August 1. The programme of arrangements was a very full one, embracing conferences, lectures, demonstrations, and practical work in the field. There was also an exhibition at Westminster Training College of reference and text-books relating to building and building crafts.

The courses were organised by Mr. Hugh Davies, H.M.I., and during the fortnight, the following lectures were given: "Building Design," by Mr. T. P. Bennett, F.R.I.B.A.; "Building Mathematics," by Mr. F. E. Drury, M.Sc.; "Building Construction," by Mr. W. R. Jaggard, F.R.I.B.A.; "Builders' Estimating," by Mr. J. R. Barns, F.I.O.B.; "Building Practice," by Mr. L. Allen-Gerrard, F.I.O.B.; "Building Geometry," by Mr. J. F. Dowsett; "Building Science," by Mr. F. E. Drury, M.Sc.; "Surveying and Levelling," by Mr. A. E. Holbrow, A.R.I.B.A.; "Science of Plumbing and Sanitation," by Mr. A. Everett, B.Sc.; "Painting and Decorating," by Mr. H. Davis Richter, R.I., and Mr. A. R. H. Jackson, A.R.C.A. (craft instructor, Mr. Leonard Drinkwater); "Plumbing in History," by Mr. Martin S. Briggs, H.M.I., F.R.I.B.A.; "The Use of the Lantern," by Mr. W. W. F. Pullen, H.M.I.; "The Preservation of Ancient Buildings," by Sir Frank Baines, C.V.O.; "The Government Programme of Building Research," by Dr. R. E. Stradling; "Laboratory Procedure," by Mr. W. W. F. Pullen, H.M.I. For teachers of building and plumbing a number of special lectures were arranged, including "The Relation Between Technical Teaching and Apprenticeship Training," by Mr. Reeves Charlesworth; "The Preparation of a Lecture," by Mr. H. Blackburn, B.Sc.; "Recent Developments in Hot Water Heating," by Mr. R. W. Cairns, M.R.San.I., and Mr. R. W. Rowell, M.R.San.I.; and "Laboratory Procedure," by Mr. W. W. F. Pullen, H.M.I. For teachers of painting and decorating a number of special arrangements were also made, including a lecture by Sir Lawrence Weaver, K.B.E.; "The Development of French Furniture of the Seventeenth and Eighteenth Centuries in its Relation to Adam Work in England," by Mr. H. P. Shapland, A.R.I.B.A.; "Wall Papers: Their History, Production, and Use in Decoration," by Mr. H. C. Dowling, F.R.S.A.; and "The Teaching of Lettering," by Mr. Will Mellor.

Among other arrangements were visits to junior technical schools in London, including the L.C.C. School of Building and the Northern Polytechnic. Visits were also paid to the British Oxygen Co.'s works at Wembley; to the Victoria and Albert Museum; to Messrs. Naylor Bros., paint and varnish manufacturers, Slough; to the British Empire Exhibition; to building works in London; and to the London County Hall. There was a demonstration of acetylene welding arranged by the British Acetylene and Welding Association, at the works of Messrs. Allen-Liversidge, Ltd., Poplar; a practical demonstration of "Copper Pipe Work," arranged by the Copper and Brass Extended Uses Council; and a special demonstration of the use of the Aerograph for spray painting in connection with plain and decorative work. There was also a conversation at the Painters' Hall (reported in our last issue); and, by invitation of the Board of Architectural Education of the R.I.B.A., a conference was held at 9, Conduit-street, when papers on "The Teaching of Building Construction" were read by Professor Beresford Pite, F.R.I.B.A., and Mr. Martin S. Briggs, H.M.I.,

F.R.I.B.A. Much of the necessary demonstration work in connection with the courses was carried out at the Regent-street Polytechnic, on account of its fine technical equipment. The survey work in the field was all done at Greenford Green, near Harrow, under the direction of Mr. A. E. Holbrow, A.R.I.B.A.

These courses of instruction form part of the progressive educational policy in relation to the building trade which is being carried out by the Board of Education. The teachers who take these courses are selected from recognised schools from all parts of the country. Not more than half the number attending recently were full-time teachers of building subjects. The advantages of these refresher courses are manifold. Men come from comparatively remote parts of the country, and for a fortnight have the advantage of hearing lectures by experts on all phases of building work, handle the latest technical equipment and apparatus, examine new materials, witness practical demonstrations of new processes, inspect important works in progress, exchange ideas with fellow teachers, and come into personal touch with some of the best brains of the building industry. The result is an all-round tuning-up of knowledge and of teaching technique which has beneficial reactions throughout the whole country. Even so, it is widely recognised that these courses are at best but an attempt to set our educational house in order. A high authority on technical education, in conversation with a representative of *The Builder* lately expressed the view that the time has come for a complete overhauling of our present methods of training men for the building trade. The apprenticeship system, he said, was perfectly adapted to mediæval conditions, but it was extremely doubtful whether it was equally well suited to modern industrial conditions and requirements. Owing to the growth of the financial type of building enterprise, controlled by men who had no real interest in building except a financial one, it was becoming very difficult for youths to acquire an intimate knowledge of and skill in their craft by the apprenticeship system alone. This criticism, of course, was quite a general one; it was fully realised that there are numbers of firms the heads of which are practical builders interested in building for its own sake, and not merely as a means of making money. For all that, our informant was convinced that the present system was too haphazard to be properly efficient. He pointed to the great number of small builders carrying on business all over the country, many of them quite inefficiently. He thought that the time was coming when numbers of such small men would have to amalgamate if they were to become efficient and provide a satisfactory training for building trade workers. As an instance of successful combination, he mentioned the case of the "Garsubil" (Garden Suburb Builders), who carry on widespread building operations on properly organised lines, and provide a completely efficient technical training for their workers. He believed that the only way to raise the standard of building craftsmanship was to develop a system of full-time courses of technical instruction in the schools. Those building firms which had sent their young employees to the schools had found that the policy amply repaid them, for such men showed a remarkable improvement in efficiency and in course of time became valuable members of the technical staff. The Board of Education, he believed, was doing the best that could be done under existing conditions, but until there was a wider appreciation of the possibilities of intensive training, it would be optimistic to look for any great improvement in the technical efficiency of building trade workers. The refresher courses for teachers of building subjects such as had been recently held in London did a great deal of good by their pervasive influence, but the ultimate aim ought to be the general establishment of full-time courses in the technical schools with full-time teachers. He was hopeful that building trade employers would see the desirability of such a reform and help to bring it about.

AN AMERICAN STEEL HOUSE

IN the United States, as in this country, experiments are being made in building houses with a steel framework. Messrs. C. H. Dexheimer & Sons, of Toledo, Ohio, are now building a fireproof, steel-framed bungalow. The outside dimensions of their bungalow are 24 ft. 4 in. by 34 ft. 4 in., with an 8 in. hollow tile wall to the first floor joists. On this are set the steel floor joists, steel studs and rafters, rigidly bolted together. Oak floors are used throughout with birch trim in the living room and dining-room and pine in the bedrooms. The roof covering consists of wood sheathing on steel rafters covered with asphalt shingles. This house was built at an approximate cost of 4,000 dols., including all plumbing, heating and electrical work. If desired the cost could be considerably reduced by omitting the fireplace, hardwood floors and trim, and building in quantity lots. The cost is based on the purchase of all material in small lots.

This system of construction is not limited to any one size or type of residence. It is simply a case of using steel in exactly the same manner as wood is used to form the framework of the building. The system is absolutely flexible. It can be used in any size or type of house, either brick or stucco exterior. The floor joists are the ordinary type of steel joists, manufactured by the Truscon Steel Company, sometimes known

making a complete fireproof structure throughout. This type of framework is speedy and economical. For a bungalow of this size the frame can be erected in about two days with four labourers all ready for other trades. It is very simple to erect for a man who is experienced in handling steel work, although any man can be taught to do the assembling.

In Ohio the cost of the fireproof bungalow is practically the same as the frame structure. This, of course, depends entirely on the price of materials and labour conditions. It is claimed that in a comparison with a frame structure the depreciation and upkeep on a building of this type is practically nothing, so that in the long run there is no question but that the fireproof bungalow is by far the most economical. Due to the fact that the steel frame is absolutely rigid, and that there is no wood in it to warp or shrink, the possibility of any cracking in exterior or interior walls is said to be absolutely eliminated. The hollow walls and floors form a perfect insulation against heat and cold, and the house is absolutely vermin-proof. There is another very important point to be considered. On account of the depletion of the forests, lumber prices seem destined to go higher and higher. It is believed in America that the time is not far off when it will become an economic necessity to eliminate the rough lumber on the ordinary house. The elimination of this lumber would release an enormous amount of lumber for other uses where substitutes cannot be used to advantage.

An American Steel-Frame House.

as metal lumber and used extensively in schools, apartment buildings, &c. The size and spacing of these joists depend on the manufacturers' tables of safe loads. The exterior walls consist of 4 in. channel studs, spaced approximately 24 in. on centres, covered with a rib metal lath weighing 3½ lb. to the yard. This lath is covered on the outside with waterproofed cement plaster to a thickness of about 2 in. and back plastered. The interior walls are 4 in. steel studs with metal lath and plaster. Metal lath is used throughout. The floors are 2 in. concrete, reinforced with 4 lb. rib metal lath, covered with finished wood floor nailed to wood sleepers attached to the steel joists.

The floor construction can be varied without any additional cost by applying the wood floor directly to the top of the steel joists and attaching the lath to the underside of the joists, which is then plastered, so as to form a plastered ceiling throughout the basement. Either type of floor is fire-safe and dust-proof, eliminating the possibility of any fire starting in the basement spreading to the other parts of the building. In erecting the steel frame, exactly the same procedure is followed as with a wood frame. All material is purchased out to length; studs, rafters and joists are punched on the job with a small hand punch and all connections are bolted, making a complete and rigid frame. The windows used are the steel casement type,

WORKMEN'S COMPENSATION

The House of Lords in two cases, Glasgow Iron and Steel Company v. Dickson and Coltness Iron Company v. Dagleish (*The Times*, July 24), had to consider a point under the Workmen's Compensation Act, 1923, which is as follows:—Section 1 of the Act of 1923, which came into force January 1, 1924, repeals the two War Additions Acts of 1917 and 1919, but contains a proviso "that the addition provided for in the said Acts shall continue to apply to a weekly payment payable to a workman under the Workmen's Compensation Act, 1906 (hereinafter referred to as the principal Act) or under any enactment superseded by that Act in respect of total incapacity arising from an accident which occurred on or before the said December 31 so long as the workman remains totally incapacitated, and the addition shall for all purposes be treated as if it were part of the weekly payment."

In the cases in question the accident had happened before December 31, 1923, and total incapacity had resulted; but the facts in the first appeal covered the second appeal, so we only give the facts relating to the first of the two cases. The incapacity lasted from September 14, 1922, to November 18, 1923. Then the man had become fit for light work, but

total incapacity from the accident recurred on February 23, 1924. The question was, therefore, whether the proviso enabled the war addition to be given, for if not, the new scales provided in the Act not being applicable, the workman could only claim compensation as originally provided in the principal Act without War Additions.

The scales provided in the Act of 1923 do not apply because they are contained in sections 2 to 4 in the early part of the Act, and section 30 provides that the provisions of sections 2 to 10 shall not apply where the accident happened before the commencement of this Act.

It was contended that the effect of the proviso was that by reason of the words "so long as the workman remains totally incapacitated" it only applied to a workman who on December 31 was actually receiving compensation for total incapacity, but the House of Lords, affirming the First Division of the Scotch Court of Session, held that the men were entitled to the War Additions. From the judgment of Lord Durham as reported, it was held that the word "remains" which was especially relied upon in argument, did not involve any interruption at all to the incapacity.

BOOK REVIEWS

Land and Engineering Surveying. By G. L. LESTON. 24th Edition. 1925. (London: Crosby Lockwood & Son.) 3s. 6d.

THIS is a new edition of the well-known book written by T. Baker, C.E., which has been in use as a text-book by those preparing for the profession of land surveying. The fact that this is the 24th edition is the best possible testimony to its worth, and the new edition will be welcomed by the profession. It may be worth while to remind our readers of its scope. Chain surveying for small estates, the survey of towns, the determination of heights and distances, levelling, and the simpler work required in railway surveying, including the setting out of circular curves. Some problems arising out of the sale of land in which it is necessary to set out in various ways any given acreage from an estate, are dealt with in detail. Geodetic problems are not mentioned, and considering the size and price of the book it is obvious that a great many things must be omitted. But it is a work that has helped many, and we think it will continue to be invaluable for the class of surveyor for whom it has been written.

Building Mathematics. By R. W. M. GIBBS. B.A., B.Sc. 1925. (London: Blackie & Son, Ltd.) 4s. nett.

THIS is one of the many books on mathematics which have been written in order to facilitate the application of arithmetic to technical problems. An introductory section deals with the simpler operations involving the use of algebraical symbols, the use of trigonometrical formulæ of the simplest character. Afterwards, the method of dealing with the problems arising out of the measurement of brickwork, arches, beams, and girders is considered, and some tables to facilitate the work are given. Answers are given to the questions set (on almost every page), and these will be valuable to the student in verifying his work. These answers are, however, said to be "approximate... only to the degree of accuracy justified by the data." This may be a stumbling block to some, and in our experience it is wiser to ask for the results of any computation to the nearest cubic foot, or such other unit as may be desirable, when the exact figure is an unnecessary refinement. The idea of any computation must be to obtain either an estimate with some degree of exactness, and the idea of approximations should always be very carefully explained to students, so that no encouragement in slovenly work is possible.

NEW BUILDINGS IN LONDON.

Barnes.—A new cabinetmaking factory, etc., is to be erected in Station-road, Barnes, W., for Messrs. John Barker & Co., Ltd., Kensington High-street, W.8. Plans by Mr. H. L. Cabuche, F.R.I.B.A., the company's architect.

Barnsbury Park.—A new synagogue is to be erected in Barnsbury Park, N., to accommodate about 500 persons. Plans by Mr. Charles Living, jun., 75, The Grove, Stratford, E.15.

Bethnal Green.—A block of tenement dwellings, to be known as Freemantle House, is to be erected on the Collingwood Housing Estate, for the L.C.C. The contractors are Messrs. Bowley Bros., Ltd., Tottenham, whose tender amounted to £24,000. The architect is Mr. G. Topham Forrest, F.R.I.B.A.

Blomfield-street.—Work is in hand on the foundations of the large office building to be erected at the corner of Blomfield-street and New Broad-street, E.C.2. The contractors are Messrs. Walter Lawrence & Sons, 19, Finsbury-square, E.C.2. The architects are Messrs. M. E. and O. H. Collins, 115, Old Broad-street, E.C.2.

Bushey.—Arrangements for the building of the new Masonic boys' school are expected to be completed by the end of 1925. The architects are Messrs. Davis & Emanuel and H. C. Smart, 73a, Queen Victoria-street, E.C.4. The cost is estimated at £250,000.

Canning Town.—The Employment Exchange is to be enlarged and a new building erected on an adjoining site. Plans have been prepared by H.M. Office of Works, Storey's Gate, S.W.1.

Coleman-street.—An office building is being erected on a site in Coleman-street, E.C.2, at the junction of Basinghall-avenue. The contractors are Messrs. G. E. Wallis & Son, Ltd., Broadmead House, Panton-street, W.1. The architects are Messrs. Robert Angel & Curtis, 133, Regent-street, W.1.

Dartford.—Messrs. Hopkins & Sons, Station Approach, Dartford, are erecting a new bakery and stores for the Dartford Co-operative Society, Ltd. The architect is Mr. L. G. Ekins, F.R.I.B.A., Co-operative Wholesale Society, 99, Leman-street, E.1.

Edmonton.—Alterations and additions are to be made to the Edmonton Empire in New-road, N.9. Plans have been prepared by Mr. Cecil Masey, 19, Devereux-court, Strand, W.C.2.

Erith.—A contract for the building of 100 houses on the Losney Farm site has been placed with Messrs. G. H. Gunning & Sons, Ltd., Bank Chambers, High-street, Erith. Plans have been prepared by Mr. H. Hind, Town Hall, Erith.

Eltham.—The "White Hart" public house in High-street is to be rebuilt by Messrs. Style & Winch, Ltd. Plans by Mr. Nowell Parr, 42, Cranley-gardens, South Kensington, S.W.

Enfield.—A new church hall for St. Stephen's Church is being erected. The contractors are Messrs. W. H. T. Kelland & Sons, Ltd., 43, Manor-road, N.19. The architects are Messrs. Geo. Baines & Son, F.R.I.B.A., 121, Victoria-street, S.W.1.

Greenwich.—The contract for the new administrative offices and board-room for the Greenwich Board of Guardians has been placed with Messrs. J. Elliman & Son, Ltd., 102, Bromley-road, Beckenham, Kent, at £14,143. Plans for a new nurses' home have been prepared by Messrs. W. H. Pite, Son & Fairweather, 12, Carteret-street, S.W.1.

Islington.—A new factory is to be erected at Nos. 233-5, Liverpool-road, N., for Messrs. Bina & Barrey, propeller pencil manufacturers. Plans have been prepared by Mr. Frank Nash, Lic. R.I.B.A., 6, New-square, Lincoln's Inn, W.C.

Kensington.—A housing scheme consisting of 30 flats and five cottages is to be carried

out. The contractors are Messrs. Hill & Gurr, of Bromley, Kent. The architects are Messrs. A. & J. Soutar, 8, King William-street, Strand, W.C. The quantity surveyor is Mr. E. J. Fairchild, 10, Adam-street, Adelphi, W.C.

Kingston.—The 1924-5 building programme of the Kingston Education Committee includes the erection of the new Tiffin Boys' School. Messrs. Jarvis & Richards, 60, Tufton-street, S.W.1, are the architects.

Letchworth.—A block of office and business premises is to be erected on a site in Works-road. Plans by Messrs. Robert Bennett and Milsom Bidwell, of Leys-avenue, Letchworth.

Lewisham.—A housing scheme embracing 50 dwellings is being carried out by Mr. A. J. Glock, M.I.Struct.E. 24, Victoria-street, S.W.1, in Lewisham. Another scheme in Brightling-road and Bexhill-road concerns about 400 houses of which 70 are now in course of erection.

Long Acre.—It is proposed to rebuild Nos. 87-91, Long Acre, W.C.2, as additional accommodation for Odham's Press, Ltd. The architects are Messrs. Francis Chambers & Sons, 11a, College Hill, E.C.4.

Mildmay Park.—Destroyed by fire last year, the St. Jude's Church Schools, N., are to be reinstated, a contract having been placed with Messrs. Bull & Esdaile, Ltd., 30, Stannary-street, S.E.11. Mr. Charles Waymouth, F.R.I.B.A., 104 High Holborn, W.C., is the architect.

Mill Hill.—Building land on the Stonefield estate has been sold at £500 per acre for development. The surveyors are Messrs. Knight, Frank & Rutley, Hanover-square, W.1.

Morden.—Large rolling-stock accommodation is to be provided at Morden, the new Clapham to Morden tube terminus, holding about 250 cars. Plans have been prepared by

Mr. S. A. Heaps, architect to the London Underground Railways, Broadway, S.W.1. The work is being carried out by the company's staff.

North Finchley.—A new hall is to be built at the Albert-road School to plans by Mr. P. T. Harrison, 9, The Hawthorns, Regents' Park-road, Finchley, N.3.

Norton Folgate.—The Anglo-American Oil Co., Ltd., of Queen Anne's Gate, S.W.1, have agreed to purchase an area of 2,950 sq. ft. with a frontage in Norton Folgate for an extension of their petrol service station. The company's chief engineer is Mr. J. T. Johnstone.

Oxford-street.—Demolition of part of the old buildings has been commenced in connection with the new emporium to be built in Oxford-street, W.1, for Messrs. Bourn & Hollingsworth, Ltd., drapers. The general contractors are Messrs. F. G. Minter, Ltd., Ferry Works, Putney, S.W.; the steelwork will be erected by Messrs. Dorman Long & Co., Ltd., 4, Central Buildings, Westminster, S.W.1. The architects are Messrs. Slater & Moberly, 46, Berners-street, W.1.

Piccadilly.—Arrangements have now been completed for the building of the Park-lane Hotel in Piccadilly, W.1. The architects are Messrs. Henry Tanner, 3, Hanover-square, W.1. The quantity surveyors are Messrs. Pease & Tanner, 46, Lincoln's Inn Fields, W.C.

Preston-road.—A new sports pavilion, to cost about £7,000, is to be erected at Preston-road, W., for the Selfridge Club. The contractors are Messrs. R. Schooley & Son, 5, Market-street, E.C.2. The architects are Messrs. Duke & Simpson 358, Strand, W.C.2.

Regent-street.—Work will probably start at the end of the year on the pulling down of the old premises in Regent-street, W.1, of the Goldsmiths' & Silversmiths' Company. The architect for the new building is Mr. Sydney

V. North, F.R.I.B.A. (Messrs. North, Robin & Wilsdon), 35-39, Maddox-street, W.1.

Regent-street.—Work is now in progress on the site of Nos. 252-262, Regent-street, W.1, where the large "Regent Arcade" is to be built to the designs of Mr. S. Gordon Jeeves, 16, Hanover-square, W.1. The contractors are Messrs. Kirk & Randall, Ltd., 146, Grosvenor-road S.W.1. The quantities have been prepared by Mr. W. H. Webber, 33, Farnival-street, E.C.4.

Regent-street.—It is proposed to let on building lease the large site known as No. 16, Regent-street and 7, Market-place, W.1. The surveyor is Mr. John Murray, F.S.I., 11, Suffolk-street, Pall Mall, S.W.1.

Ruislip.—A new school is to be erected to plans by Mr. H. G. Crothall, F.R.I.B.A., Middlesex County Hall, Westminster, S.W.1. The contractors are Messrs. Y. J. Lovell & Sons, Gerrard's Cross.

Sanderstead.—Funds are now being raised for the building of the proposed new church of St. Mary, the first portion of which is estimated to cost £9,800. Messrs. Greenaway & Newberry, Parliament Mansions, Victoria-street, S.W.1, architects.

Sidmouth.—The committee of the Victoria Cottage Hospital have decided to build an entirely new hospital, costing about £15,000. The architect is Mr. Leslie T. Moore, F.R.I.B.A., 3, Raymond Buildings, Gray's Inn, W.C.1.

Surbiton.—A large detached house is to be built at Surbiton for Mr. A. Robertson. Plans by Mr. E. Laud Pierce, 119, Victoria-street, S.W.1.

Stonebridge Park.—An early start is to be made on the erection of the first portion of the buildings at Tokington, which include a new church, mission hall and vicarage. The architect is Mr. G. Percy Pratt, 174, High-street, Acton, W.3.

Wandsworth-road.—Messrs. Triggs & Co., 1a, Mackay-road, Clapham, S.W., are the contractors for alterations and additions to premises for Mr. A. Norman, tailor. The architect is Mr. G. Percy Pratt, 174, High-street, Acton, W.3.

West Ham.—Plans have been prepared by Mr. R. C. Turner Gordon, 304, Romford-road, West Ham, for alterations and additions to shops and showrooms in Woodgrange-road, West Ham, E., for Messrs. L. W. Spratt & Sons, drapers, Forest Gate.

Westminster.—The contract for the extension of the National Library for the Blind, Tufton-street, S.W.1, in Great Smith-street, S.W.1, has been placed with Messrs. Higgs & Hill, Ltd., Crown Works, South Lambeth-road, W.1. Mr. Sydney Tatchell, F.R.I.B.A., Bank Chambers, 32, Strand, W.C., architect.

Willenden.—Large works and compressing stations are to be erected on the North Circular road by Messrs. Allen, Liversidge, Ltd., acetylene manufacturers, of Victoria-street, S.W.1. The buildings and layout have been prepared by Messrs. Heron-Rogers & Pettitt, 181, Queen Victoria-street, E.C.4.

The L.C.C. has granted permission for the erection of the following:—Ten terrace houses in Gerda-road, New Eltham, by Mr. Kenneth Dalgleish; four detached and ten semi-detached houses in Coniston-road, Lewisham, by Messrs. Reynolds & Co.; 100 houses at Charlton Park by the Greenwich Metropolitan Borough Council; two semi-detached bungalows in Glenlea-road, Well Hall, Eltham, by Mr. W. Childs; seven houses in Kidbrook Park-road, by Mr. A. Mitchell Torrance; 14 semi-detached houses in a new road between Well Hall-road and Archery-road, Eltham, by Mr. H. Bower; a permanent pavilion on ground at Beckenham-hill, by Mr. A. V. Booker; four bungalows on the west side of Glenesk-road and south of Dunvegan-gardens, Woolwich, by Messrs. J. G. Francombe & Co.; Nos. 15 and 16, Croft-villas, Green-lane, Eltham, by H. G. Allbon; bungalow at corner of Glenesk-road and Bexley-road, Eltham, by Mr. W. Childs; detached house in Shooters Hill-road, by Mr. W. C. Teasdale. The committee have also approved the extension of the existing hall of St. Luke's church, Eltham, by Mr. J. J. Taylor.

(For rates of wages in the Building Trade in Scotland, see page 232.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

FEATHERSTONE.—It is proposed to invite tenders for the erection of a proposed "Middle" school at Featherstone, with accommodation for 360 pupils.

FULHAM.—Extensions to Fulham Cemetery, Sheen, for the B.C., are to cost £12,500.

GELYGAER.—The U.D.C. proposes, in conjunction with the Bedwelty U.D.C. to erect a new bridge over the Rhymer River at Fleur-de-Lis, on the road to Tirybherm.

GREASBOROUGH.—The U.C. having received the sanction of the Ministry of Health to proceed with the scheme to build a further 32 houses.

GREENOCK.—At the last meeting of the Dean of Guild Court, plans were passed for the erection of 180 dwelling-houses in Sinclair-street, for the Corporation.

HASTINGS.—A scheme has been prepared for the construction of a bathing pool at Seaside-road, the estimated cost being £25,000; the scheme includes seating accommodation for 2,000 spectators by means of balconies.—As a relief work it is proposed to widen Sedlescombe-road, at a cost of £90,000. The Housing Committee recommend a contract with Messrs. Braithwaite & Co., Ltd., for the supply and erection of 50 steel houses, at a cost of £24,337 10s.

HEBBURN.—The U.D.C. propose the erection of an elementary school for 400 children.

HEMSWORTH.—The National Housing Corporation of Great Britain, Ltd., has decided to erect 1,000 houses in the various districts within the R.C.'s area.

HORNSEY.—The T.C. have decided to erect a new elementary school at an estimated cost of £56,500.

HULL.—The Bridges Committee have decided to recommend the City Council to apply for Parliamentary powers to spend £275,000 on the construction of a new North Bridge.

ILFORD.—The E.C. have prepared plans for an open-air school at Bruton-road.—Tenders are to be invited for the construction of a convenience at Eastern avenue, the estimated cost being £1,300.—A drainage scheme for New North-road is to be undertaken, at a cost of £5,000, and tenders are to be invited.—Tenders are to be invited for the erection of 24 maisonettes and 98 non-parlour houses to complete the Horns estate housing scheme.—Plans passed: Bank premises, corner High-road, for Mr. G. Coles; 11 houses, Colombar-road, for Mr. F. B. Harrison; 14 houses, Salisbury-road, for Mr. J. W. Davies; 84 houses, Beehive-lane, and other roads, for Messrs. A. W. Jagers & Sons; 10 houses, Heath View-gardens, for Mr. F. H. Brown.

LAMBETH.—Sanction has been given the B.C. to borrow £160,862 for the erection of 188 houses and 32 flats on the Bloomfield estate.

LANARK.—The District Committee will shortly be in a position to issue forms of tender to contractors for the various works in connection with the erection of a Health Institute at Croft-road, Cambuslang.

LANCASHIRE.—The M.T. are in communication with the various authorities in the district regarding the proposal to construct a new road between Manchester and Liverpool, the estimated cost being three millions. The Ministry are anxious to proceed with the scheme in order to provide employment.

LANCASTER.—A scheme has been prepared by the Lancashire County Council for the construction of a bypass road on the Lancaster-Carnforth main road, at Bolton-le-Sands, at a cost of £43,000.

LANGOLD.—Mr. W. Humble, a director of the Firbeck Colliery, has given a site for a Wesleyan chapel.

LEICESTER.—The Housing and Town-planning Committee report negotiations with the Leicester and District Building Trades Employers' Association for the erection of 400 brick houses, at a cost of £290,831 15s.

—The E.C. will submit a scheme for extensions to the Colleges of Art, at an estimated cost of £47,000, and repairs and extensions to the Overton-road school, at a cost of £8,097.

LEXDEN AND WINSTREE.—The R.C. are applying for sanction to borrow £20,000 for the erection of 46 houses in their areas.

LIVERPOOL.—The C. B. propose to apply to the Ministry of Health for sanction to borrow £29,937 for the erection and furnishing of two sections of the Northway Council Schools, and £2,459 for alterations at the Anfield-road Council School.—A start may be made this autumn on the construction of the arterial road from Liverpool to East Lancashire and into York-shire.

The road will cost nearly £3,000,000, and about £350,000 of this amount will be borne by Liverpool.

LLANELLY.—The borough surveyor has reported to the Council that the remodelling of existing abattoir will cost £15,000, whereas to construct a new one would cost £25,000. Decision as to which scheme is to be adopted is deferred to another meeting.—The Council is to erect new schools at Bigyn and Queen Mary's Walk, and to alter structurally the schools at Stebonheath and Colehill.

LONDON (WESTMINSTER).—Messrs. Ashley & Newman, architects, have prepared plans for the erection of a six-story building comprising 78 flats, and an extension of Jessel House by five flats, for the Easher-street housing scheme of the City Council.—The Congregational Chapel Trustees have agreed to sell the site in Orange-street to the City Council for the erection of the new St. Martin's library.—The L.C.C. have agreed to a scheme of Mr. Gordon Reeves for the formation of a new street to be called Regent Arcade, in connection with the erection of a building at 252-262, Regent-street, 22-25, Argyl-street, and Little Argyl-street.

LONGBENTON.—The U.D.C. has obtained sanction from the M.H. for a loan of £30,000 for the erection of 56 houses on the Glebe estate, Forest Hall.

MALTRBY.—The Higher Education Committee of the C.C. have decided to erect a new secondary school, with accommodation for 300 pupils.

MANCHESTER.—The Corporation are considering a scheme for electricity extensions, at a cost of £420,000. It is proposed to acquire land at Moston for a housing scheme to cost £359,000.—An elementary school is to be erected at Ravenbury-street, Clayton, at a cost of £27,000.—A loan of £25,000 is to be sought for a scheme of improved street lighting.—Wilmislow-road is to be widened, at a cost of £2,820.—The Housing Committee are being asked to consider the possibility of expediting the housing of the people by erecting houses in rows, with 20 houses per acre, if the Ministry of Health will approve.

MARKET HARBOUROUGH.—The U.D.C. have agreed to subsidise a further 30 houses. Plans passed: Four houses, Morley-street, for the Land Society; dairy, Farndon-road, for Co-operative Society; extension of workshops, Caxton-street, for Messrs. J. Haddon & Co.

MARLEYBONE.—The B.C. have prepared a £98,000 scheme for the widening Park-road.

NEWMAN.—The M.H. has approved the erection of 100 of the 200 proposed houses for the U.D.C.

NORMANTON (YORKS).—Subject to an agreement being arrived at between the Governors and the County Council, extensions are to be carried out at the Normanton Grammar School, at an estimated cost of £20,000.

NOTTINGHAM.—The County E.C. has purchased sites at Bldworth, Ollerton and Edwinstowe for elementary schools. Plans passed: Technical school at Mansfield.

OLDBURY.—The D.C. propose to build 100 houses per year for the next three years.

PLYMOUTH.—The Housing Committee have decided that the 24 flats at Pottery Quay should be undertaken by the Borough Surveyor, at a cost of £11,592.—Plans passed: Erection of a refreshment pavilion at the Hoe, at a cost of £2,800.

PRESTON.—The T.C. propose to erect 100 houses on the Delaware-street site to house the people dispossessed by the demolition of the Marsh-lane insanitary area.

REDCLIFF.—The B.E. have passed plans for the erection of the proposed Church Central School for boys.

RETFORD.—The governors of the Retford Grammar School have decided to proceed with extensions at a cost of £8,500.

ROCHDALE.—The T.C. is recommended to provide public sanitary conveniences, with offices above, near the Wellington Bridge, at an estimated cost of £7,000.

RUGBY.—The U.C. have decided to erect 100 houses on the Eastlands Estate, provided the sanction of the Ministry of Health can be obtained, at an estimated cost of £68,116.

ST. PANCRAS.—The B.C. have accepted the offer of the Imperial War Graves Commission to supply and fix, free of charge, a War Cross in Finchley Cemetery. Mr. A. J. Thomas, F.R.I.B.A., Hon. Architect.

SHEFFIELD.—The United Methodistists of Sheffield have purchased the house and grounds known as Shire, in Psalter-lane, as a site for a new church.

SKEDBY.—The Skegby R.D.C. have a scheme for sewerage and sewage disposal works to cost £17,800.

SMETHWICK.—Plans have been prepared for the development of the Slatch estate, providing for the erection of 114 houses. The Corporation have decided to invite tenders for the erection of these houses, and also for the erection of 88 on the site in Hamilton-road.

SOUTH SHIELDS.—A war memorial cross is to be erected at the corner of Westoe-road and Horsley Hill-road by the War Memorial Committee.

STRATFORD-ON-AVON.—The R.D.C. propose to erect 84 new houses.

SWINTON.—The Swinton U.C. have received the sanction of the M.H. to the borrowing of £1,390 for the purchase of the Slade Fields for housing purposes, and at their meeting decided to take the necessary steps.

TIVERTON.—The R.C. have approved a scheme of 104 houses for their area.

TRECEFFEL.—Cardigan county surveyor reports that the Ministry of Transport has suggested certain alterations in the plans of the Treceffell Bridge, the total expenditure now being £6,500.—The C.C. propose to erect a new bridge at Llechryd.

TYNEMOUTH.—The Corporation are acquiring Nos. 19 and 20, Howard-street, at a cost of £2,500, for adaptation as municipal offices.—The Cleansing Committee are considering a site for the construction of a wharf for the refuse disposal scheme.—The M.H. have sanctioned a loan of £1,439 for the reconstruction of the sea banks.—A loan of £7,150 is to be raised for the purchase of property for the extension of Hotspur-street.—The Borough Engineer has prepared a scheme for a roadway at the edge of the cliffs.—The M.H. have approved of the scheme for a block of tenements at Bell-street, in connection with the slum clearance scheme.—The Housing Committee have decided to endeavour to erect 356 more houses.—The T.C. proposed a scheme, as outlined by the surveyor, for a bathing pool, a public shelter, 78 dressing boxes, a café, and a roof garden.

WORKSOP.—The provision of an advanced mining centre at Worksop is in contemplation by the Notts County E.C. A provisional grant of £9,800 has been made by the Miners' Welfare Committee.

WYCOMBE.—The T.C. has accepted a tender of £41,523 for the erection of 90 houses.

WYKE (BRADFORD).—The Shirley Manor estate is being laid out for a housing scheme.

TRADE ITEMS

It is acknowledged that satisfactory and effective "tinning" of metals where stress takes place, particularly in tinning and re-tinning of bearings preparatory to re-metalling, has always been difficult to obtain, this being due to the fact that the penetration of the tin into the basic metal is imperfect and not constant, hence the anti-friction metal frequently cracks owing to the layer of tin peeling from the bearing. The cleansing properties of

Soldo are, it is claimed, such that the labour involved in cleaning, preparatory to tinning, is eliminated, however rusty, corroded or oily the metals may be. Soldo contains no acid, and the metals tinned remain permanently so. The following is the conclusion of a report by the National Physical Laboratory on the properties of the Soldo tinning compound: "Effective tinning of severely rusted steel and rusty cast iron has also been accomplished by means of Soldo, the rust being removed and interpenetration between tin and steel or iron obtained, illustrating in a marked manner the cleansing properties of the compound."

We have received a copy of "The Blue Circle," the first issue of the quarterly house magazine of The Cement Marketing Co., Ltd., and Associated Companies, of Portland House, Tophill Street, Westminster. Brightly, agreeably, and withal informatively written, it is very attractively produced. Though essentially a house magazine, it contains many features that give it a much greater interest than this class of literature usually possesses; articles such as "Concrete at Wembley" and "Early Days of Portland Cement" will certainly (as the editor hopes) "interest builders and merchants," if they do not make even a wider appeal. For the firm's staff there are several features of special interest, including a page of personalia, a sports' section, and a snapshot competition. Some quotations from "The Blue Circle" of a hundred years ago provide an opportunity for some sly comment that is agreeably savoured by the Attic salt of wit. Felicitations!

Glasgow.—VARIOUS.—The Dean of Guild Court has passed the following plans:—Electricity sub-station at Nithsdale-road and Fleurs avenue, for Corporation; tennis pavilion at Crossloan-road, at Hamilton-street, for Trustees of the Roman Catholic Archdiocese of Glasgow, per Bruce & Hay, architects, 261, West George-street; houses at Possil, for the Corporation; picture house at Lorne-street and Brand-street, Govan, for G. H. Kemp & Son, 204, Here-road, Leicester, per plans by J. Fairweather, 182, Tron-gate; six double villas at Courthill-avenue, Cathcart, for Aitken, jun.; 130 houses at King's Park, Mount Florida, for McTaggart & Mickel, Ltd., per Jas. Taylor, architect, 166, Buchanan-street.

Reasons for selling, son going abroad. Price £485.—Apply, **BUTCHER**, Valuer, Benenden, Kent.

Blue Printing and Modern Plan Copying.

By **B. J. HALL, M.I.Mech.E.**
The first section of the book outlines the capabilities of the various processes and the precautions to be observed. The second describes the various types of plant now in use, and the last section deals with the lay-out of photo-printing rooms and methods of working. The book is written for (1) those who have plans to be copied; (2) those who install plant for copying; and (3) those engaged in the work of reproduction. Only methods which have proved successful are included.

In demy 8vo, 144 pp., with 62 figures. 6s. net (postage 4d.).
Obtainable from the Book Dept., **THE BUILDER, Ltd.**, Catherine-street, Aldwych, London, W.C.2.

HULL.—100 Houses on East Hill site, for the C.B.:—
†A. E. Jones, Ltd., Hull. £20,050

ILFORD.—Widening Cranbrook-road and High-street, for the U.D.C.:—
*D. T. Jackson £31,200 5 3

ILFORD.—Erection of 12 houses at Perth-road, for the U.D.C.:—
*Wm. Simms, Stepney £8,500

KERESLEY.—Extension at elementary school, for the Warwickshire E.C.:—
*Humphreys, Ltd. £7,697
*Couzens & Akers (heating) 447

LANCASHIRE.—Construction of bridges on the Garstang by-pass road, for the C.C.:—
*Morrison & Sons, Liverpool—
Kirkland Bridge £9,097 6 2
*J. Byrom, Ltd., Bury—Bridge over Lancaster Canal 6,022 0 0
*J. M. Firth, Todmorden—Bridge over railway 6,114 11 0

LIVERPOOL.—Seventeen houses and gatekeeper's lodge at Speke-road, Garston, for Messrs. Bryant & May's, Ltd., Mr. Colin S. Brothers, A.R.I.B.A., architect, Liverpool:—
*J. J. Blackburn, Worsley.

LONDON.—For alterations to the "Morpeth Castle" public house, and adjoining premises in Cadogan-terrace, Victoria Park, for Messrs. Truman, Hanbury, Buxton & Co., Ltd. Mr. A. E. Sewell, architect, 91, Brick-lane, E.1. Quantities by Mr. W. Gilbert, 74, Broad-street-avenue, E.C.2.:—
Perry & Co. £13,681
John Barker 12,976
Courtney & Fairbairn 12,933
Fairhead & Son 12,820
Knight & Son 12,641
Snewin Bros. 12,590
W. Harper, Ltd. 11,942
*H. V. Clogg 11,847

LUTON.—Sewage machinery, for the T.C.:—
*S. S. Stott & Co., Haslingden £2,343

MANCHESTER.—Shops and offices for the Motor House Co., Deansgate and Camp-street. Mr. J. Knight, F.S.A., architect, 5, Cross-street:—
Brickwork—*J. Byroms, Ltd., Bury.
Steelwork—*Lambourne & Co., Ltd., Openshaw.

MANCHESTER.—Workshops for the Blind at "Heyesleigh," Montague-road, Old Trafford. Mr. G. Westcott, architect, 13, Bridge-street:—
*A. Hodgkinson, Greenhays. £33,000

MANCHESTER.—Additions to works of Messrs. Ward & Goldstone, Ltd., Frederick-road, Pendleton. Messrs. Pye & Bennett, architects, 2, Booth-street:—
*C. L. Dale, Ltd., Hulme.

MINWORTH.—Erection of school, for the Warwickshire E.C.:—
*Isaac Langley £6,635
*Newell & Nesbitt (heating) 365

MONMOUTHSHIRE.—Improvement of the main Newport-Cardiff road, for the County Roads Committee:—
Messrs. Leadbetter, Newport £38,000

MORLEY.—Fifty-two houses, for the T.C.:—
*J. Clegg & Sons, Morley.

NORTH BRANCEPETH.—Remodelling Council school, for the Durham County E.C.:—
*T. Coates, Durham £368

NOTTINGHAM.—For the erection of stables and wagon sheds, &c., for the Nottingham Co-operative Society:—
*H. Bowles, Nottingham.

NOTTINGHAM.—For the erection of new bakery for the Nottingham Co-operative Society:—
*General contractors—J. G. Short & Sons, Nottingham.
*Ovee builders—Baker Perkins, Ltd., Peterborough.
*River wall—H. Arnold & Sons, Ltd., Doncaster.

PLYMOUTH.—External and internal painting of houses at Lambhay-hill and 46, New-street, for the C.B. Mr. J. Wibberley, Borough Engineer:—
*S. W. Cameron

PLYMOUTH.—Two blocks of houses at Pottery Quay and three bungalows, at Elphinstone Barracks, for the C.B. Mr. J. Wibberley, Borough Surveyor and Engineer:—
Elphinstone Barracks.—Work being executed by direct labour, under the supervision of the Borough Engineer.
Pottery Quay.—No tender accepted. Referred back by Council for further consideration.

PONTARDAWE.—Sixteen houses at Trebanos, for the R.D.C. Mr. E. D. Jones, architect:—
Lewis & Thomas, Pontardawe £9,328 9 1
J. Richardson, Trebanos ... 9,265 19 9
Thomas Bros., Pontardawe .. 9,049 14 6
David Davies, Alltwn 8,941 19 1
D. Morgan, Trebanos 8,907 10 0
John Morgan, Neath 8,890 18 10
*D. Evans & Sons, Glanmanan 8,872 18 0

PONTARDAWE.—Ten parlour type houses on the Hodgson-road site, Godregraig, for the R.D.C. Mr. E. D. Jones, architect:—
W. E. Jones, Ystalyfera £5,716 10 0
Lewis & Thomas, Pontardawe 5,655 17 3
D. J. Jones, Godregraig, ... 5,593 0 0
*William Morgan, Ystradgynlais 5,490 0 0

RAWMARSH.—100 Houses:—
*G. Ramsden—19 houses each £435 0
*R. Alt & Co.—19 houses " 470 0
*A. J. Pugh—21 houses " 477 0
*J. Jacques—19 houses " 484 10
*W. Thomason & Co. " 495 0

RICHMOND (Yorks).—100 Houses for the R.D.C.:—
*J. F. Banbridge, Redcar. £16,680

SILKS WORTH.—Alterations at school and erection of new departments, for the Durham County E.C.:—
*G. W. Lazenby & Co., Ltd., Ferry-hill £5,445 12

SOUTH SHIELDS.—The R.D.C. has accepted tenders for the erection of 154 houses as follows:—
86 houses at Boldon Colliery—
*H. M. Nowell, Stockton £33,715 2 8
33 houses at West Boldon—
*Jos. B. Wilson, East Boldon 15,610 0 0
30 houses at Whitburn—
*Wm. D. Allison, Whitburn. . 12,457 15 0
The total outlay will be £61,782 17s. 8d.

SATISFACTION GUARANTEED.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXIX.—No. 4,306

AUGUST 14, 1925

THE REPORT OF THE MINISTER OF HEALTH

THE most noteworthy feature of the Sixth Report of the Ministry of Health which has just been issued is the statement it contains as regards Housing, that a rate of construction appears now to have been reached which provides not merely for the normal increase in population but also in some degree for overtaking arrears. That this result is not achieved without cost is shown by the figures relating to subsidies, for during the year under review, 1924-5, £7,863,846 was paid under the Act of 1919 and £97,875 under the Acts of 1923 and 1924. The Report states that on March 31, 1925, approval had been granted for the erection of 239,354 houses under the Acts of 1923 and 1924, and of this number 99,620 were to be provided by local authorities, 132,464 by private enterprise, and 7,270 by public utility societies, and of these houses approved 72,907 had been completed and 54,131 were under construction at the date mentioned. But at the same date 211,614 had been completed under the Act of 1919, making the total number of houses erected with State assistance since the war 284,521.

The Report states that there has been a considerable increase in house building by private enterprise without financial assistance, and adding these houses to those erected with assistance in the year 1924-5 a total is given of 135,000 erected during that year. For comparison we give the figures which we published in our Leading Article September 26th, 1924. The houses authorised up to September 3rd, 1924, were: to be erected by local authorities 55,286, and by private enterprise 103,233. The Report states that the average cost in March, 1925, of houses erected by the local authorities under the Acts was £439 for a non-parlour house, an increase of £23 over the average cost in March, 1924, and £489 for a parlour house, an increase of £30 over the same average.

The amounts paid in subsidies for the year were £7,863,846 under the 1919 Acts, and £97,875 under the 1923 and 1924 Acts. The loans made to local authorities for the purchase of houses and to builders, the Report states, shows a notable increase. The amount sanctioned was £7,349,726, which is nearly double the amount sanctioned from the passing of the Small Dwellings Acquisition Act in 1899 to the commencement of the year under review. We gather from the summary of the Report contained in *The Times*, July 29, that the above sum was apportioned as follows—Under the Small Dwellings Acquisition Act £4,658,367, and under section 5 of the Housing Act, 1923, £2,691,359, a total of £7,349,726.

We think these figures are very significant as regards the Small Dwellings Acquisition Act. This Act remained a dead letter for many years, in fact until about the year 1919 few persons knew of its existence, but the amendment in this Act effected by the Housing Act 1923 has greatly increased its usefulness, as is proved by the above figures. Until it was so amended it was only available to enable a resident occupying a house to obtain an advance for its purchase, but the Housing Act 1923 enabled advances under the Act to be obtained by persons intending to

construct a house and also removed many restrictions, and the Act cannot be made too well known. We are publishing an article on this Act.

In addition to the advances mentioned above, the Report states that the London County Council sanctioned loans to metropolitan boroughs to the amount of £116,830, and themselves made advances amounting to £163,530. The above figures relating to Housing show a steady advance upon lines which are becoming better understood, and hence more efficient. There are many people who still require reminding that "Rome was not built in a day," commonplace as that remark may seem, but the reminder is the more necessary as these persons show their impatience by constant appeals for fresh legislation. Now, fresh legislation is always a disturbing element, and should only be resorted to when real occasion arises and after remedial measures already passed have been thoroughly tested and found wanting.

A child makes a more satisfactory and healthy tea in its own nursery than it does on a visit to the confectioner, distracted by many, and often unhealthy, temptations. The Housing nursery is now well supplied, and confectionery supplied by Parliament yearly would only prove a disturbing and undesirable element.

With reference to unhealthy areas, it appears that between 1919 and March 31, 1925, 66 local authorities had submitted 82 schemes for the improvement of insanitary areas, and of these schemes 43, involving the demolition of 5,323 houses and other buildings had been confirmed on March 31, 1924, and 27 schemes, involving the demolition of 3,750 houses and other buildings had been confirmed during the year under review. The Report states (what will be learned with much satisfaction by architects as much as by town-planners themselves) that a growing interest in Town Planning is recorded and that the local authorities have been appealed to to proceed more quickly.

Anyone traversing the country now that building activity has been resumed would wish that some ideas of Town Planning—using that expression in a wider sense than its ordinary meaning—could go hand-in-hand with the development of building land. On some of the lesser building estates buildings are erected in a haphazard method, one house spoiling the amenities of the next, no building line being fixed, and each purchaser or lessee of a plot doing as he likes with it, often to the destruction of the earlier erected houses. Town-Planning principles should really precede development, but they are lagging behind, and much of the countryside is suffering in consequence, though it is gratifying to note that Regional schemes have been and are continuing to be prepared in many parts of the country.

There is much other matter of interest in the Report, but in this brief notice we are confining our observations to Housing and kindred matters. We notice, however, that it is stated that there has been a tendency generally towards a reduction in rates, but an increase in assessable values. The proportion between the two is a matter of interest upon which no information appears to be given. The overburdened ratepayer, seeing a reduced rate declared, may find himself offering up thanks prematurely, for the next assessment may more than wipe out any real relief, and even then leave him worse off than he was before.

[The Report is published by H.M. Stationery Office, from any of whose branches it may be obtained price 3s. 6d.]

NOTES.

Waterloo Bridge.

MR. WALTER SICKERT in a recent letter to *The Times* observes that nine inarticulate

Londoners out of every ten know in their hearts that the question of Waterloo Bridge is one for engineers. "It is more important," he continues, "that the traffic of London should be carried on and, incidentally, that South-East London should not be flooded, than that Waterloo Bridge should be cockered up on the chance of my desiring to do a mediocre water-colour of a scene that has already been often and supremely done in its prime." Of course, if all these dire calamities were likely to happen, and our only compensation were a "mediocre water-colour drawing" by Mr. Sickert, we should decide, however reluctantly, to dispense with the drawing. But most people, including the great majority of "inarticulate Londoners," do not want Waterloo Bridge to be preserved on the off-chance of Mr. Sickert wishing to sketch it; they want it to remain because it is a great national monument; because (with a certain amount of underpinning) it can be made whole again; and finally, because it is a thing of beauty and therefore, as Keats did not forget to remind us, "a joy for ever."

The Protection of Ancient Buildings.

THE annual appearance of the Report of the Society for the Protection of Ancient Buildings should keep the public keenly alive to the value of the Society's work in helping to preserve the beauty and historic interest of our ancient structures. Even where everybody is agreed as to the necessity for restoration there is room for a wide difference in the ways it may be done. It is obvious enough, in an example here given from the Society's report, that restoration has been carried out in such a way that

something of the old charm of the original work has disappeared. We are inclined to ask whether it was better to leave the porch substantially as it was instead of putting in new buttresses, label mould, &c.; tone and texture appear to have been sadly discounted. If the subjects in this year's report are of less interest than in many former ones, the reference shows that the advice of the Society is often acted upon to the benefit of our heritage from the past. We can only hope that Lord Crawford's urgent appeal for pecuniary support will touch the sympathies of many who realise the value of our old buildings and bridges which give a charm to the landscape in these islands, which can hardly be greater the world over. Only the other day we saw an old Tudor gable and a delightful old pump which look as though they would not be long before they are nothing but the shadow of a memory, and that only to a very few people.

Broughton Church, Before Repair.

Ancient Monuments and Historic Buildings.

A CORRESPONDENT writes:—"There are well authenticated rumours that Mr. Winston Churchill is contemplating a raid upon the sums now being expended in the repair of Ancient Monuments and Historic Buildings. Architects will certainly regret if any necessary work is in consequence not carried out, for certainly the Ancient Monuments Department of the Office of Works have carried out most useful work during the past six years in preserving the Tower of London, Melrose Abbey, Jedburgh Abbey, Dryburgh Abbey, and many castles and old ecclesiastical buildings. Already researches at Richborough Castle that were bringing to the light old Roman walls have been curtailed. The total cost of repairs carried out during the past six years is £950,680, but this includes the cost of caretaking. In any case, the saving cannot be considerable and the damage to our ancient buildings if allowed to continue unchecked may be irreparable."

Photographs by Mr. H. F. Beale.

Broughton Church, After Repair.

[From the forty-eighth Annual Report of the S.P.A.B.]

The Roumanian Exhibition.

NEAR the Champs Elysées at the end of the Rue d'Orléans, there is to be seen an exhibition of the mediæval and modern art of Roumania—if the modern art may be said to count at all—which, with this exception, is of a quite unusual and even extraordinary interest. The exhibition is housed in the Musée du Jeu de Paume, very accessible to visitors. Nor is it only that the interest of the works shown is so great, but that they are set in such a becoming and harmonious atmosphere, representing the high credit to the organisers of the exhibition. The quiet grey walls, the attractive blue arras cloth which frames a remarkable eighteenth-century iconostase, all tend to sustain the beauty and completeness of the exhibition, the contents of which include pottery, textiles, carpets, embroidery, wall-painting, wood carving &c.

metal work, all of ancient character, nearly all of it distinguished by the sensibility and beauty of rare achievement. There is also much of interest to architects in the series of photographs of Roumanian architecture, which occupies one of the rooms. The exhibition closes at the end of August, and it were well worth while to visit Paris if only to see this exhibition, to which we hope to refer at greater length a little later.

War Memorial Inscriptions. We confess that the outcry against the inscription attached to the Machine Gun Corps Memorial at Hyde Park Corner is not uncalled for, and we trust that it will be altered. We should have expected such a memorial to commemorate those who fell, instead of commemorating with a bloodthirsty text the number of Germans killed. Such an inscription to all right-thinking people is opposed to what we feel and to what such memorials should convey. In reply to a question in the House it was stated that to alter the inscription would be to make the memorial unintelligible. If that were so—which we much doubt—it is better that it should be unintelligible than that such an inscription should remain.

Mural Painting in Paris. It would seem as though there was more danger to the vitality of an art in theorising and encouragement of it than in leaving its emergence to depend on the natural desire of a people towards expression. Fostered too much it becomes artificial, and theories of painting take the place of natural impulse, while the intellect dries up the sources of spontaneous artistry. The wholly remarkable series of mural paintings, for instance, which adorn the walls of the building of the Serbs, Croats, and Slovenes are spontaneous and full of nature. They are nearly life-size figures painted in tempera and live before us as a true interpretation of the life of the people. Here no theories, no academic formulæ come between the artist and the direct impulse of nature with which he is inspired. We see the native dress, the occupations, age and youth, characteristically represented in a way which is an example to us. In conversation with a Serbian gentleman, we were told that the paintings were wholly authentic of the life, character, dress, and occupation of the people represented, though one hardly needed to be told this, the paintings themselves proclaiming it. We can imagine nothing more instructive to the student of art than a visit, first to the magnificent series of mediæval paintings in the Roumanian Exhibition, and afterwards to see these Serbian decorations, the latter revealing as in the earlier art the importance of a subject matter inspiring and human enough to promote a natural and sincere expression.

The August Issue of "Architecture." THE August issue of *Architecture* is a varied and interesting number and includes several articles by contributors who are well known to the architectural profession, while the illustrations are probably of more than usual charm and interest. The articles on "Criticism," which will be continued in subsequent issues, deal with a question of some importance to readers of an architectural journal, who are constantly

asking for critical expressions of opinion on current architecture; and the articles make some attempt to show the attitude of the critic and the meaning of much of the criticism which is attempted. The magazine, we are glad to say, is receiving increasing support, and this issue contains illustrations of the Birkenhead War memorial; Bramhall Hall; some charming illustrations of Danish work; as well as the usual and fresh features of interest.

Cabinet Design, by MR. E. C. FRERE, F.R.I.B.A.
[This cabinet was designed for the President and Council of the Royal College of Surgeons of England to contain the surgical appliances, records, manuscripts and personal mementoes of the late Lord Lister. It is made of Italian walnut, inlaid with ivory and ebony, by Messrs. C. Bessant & Sons.]

GENERAL NEWS

Public Lighting Conference.

The second Annual Meeting and Conference of the Institution of Public Lighting Engineers is to be held at Leeds from September 14 to 16.

Bramall Hall.

Bramall Hall, recently threatened with demolition, has been bought by Mr. J. H. Davis, of Manchester, who intends to reside there.

Change of Address.

Mr. Arthur Boxall, quantity surveyor, has removed his offices from Lloyds Bank Chambers, Henrietta-street, W.C., to 7, Queen Anne's Gate, Westminster, S.W.

Obituary.

We regret to announce the death of Mr. James Franklin Fuller, for many years architect to the Representative Body of the Church of Ireland, to the Benchers of the King's Inns, and to the National Board of Education, Ireland.

New Hull Bridge.

Hull City Council has approved a scheme for a new bridge to replace the existing structure which provides the main avenue of communication between the western and eastern portions of the city. The estimated cost of the bridge is £275,000.

Abbey War Memorial, St. Andrew's Church.

The Abbey War Memorial scheme at St. Andrew's Church, Plymouth, involving the purchase of ancient buildings adjoining the fifteenth century church and their reconstruction and restoration, will be completed next month, at a cost of £10,000.

Wells Cathedral.

The west front of Wells Cathedral is reported to be in a dangerous condition. One fine statue has recently fallen, and others are stated to be in imminent peril. It is reported that several thousands of pounds will have to be spent on the consolidation of the masonry and the repair of the statues.

Hidden Art Treasure.

A Sheffield artist, Mr. Harry Baxter, of Newhall-road, after many months' patient work removing the stain of years, has discovered that a painted panel is the work of Anselmus Hebbelynck, better known as Jan Van Hulle, the well-known Belgian artist. The picture bears the artist's signature.

A Model of St. Paul's.

A model of St. Paul's Cathedral, showing the faulty condition of the piers of the dome and the suggested method of saving the structure by means of hidden collars of reinforced concrete, has been ordered by the authorities of the Science Museum at South Kensington. It will be executed by the author of the scheme, Mr. William Harvey. The Museum authorities required the model as a means of demonstrating to future generations the nature of the weaknesses discovered in Wren's structure, and the ideas of constructional experts of to-day.

The Holt Building, Liverpool.

Messrs. Alfred Holt & Co., the Liverpool ship-owners, have placed the £857,000 contract for the building of the main superstructure of their new building, between Water-street and Brunswick-street, with the Liverpool firm of William Thornton & Sons, Ltd., of Wellington-road. The contract was competed for by firms in Liverpool, London, Manchester, Birmingham, and Rugby. It is for the whole of the building, a half of which is being built at a time. Messrs. Arnold Thornely and Herbert J. Rowse are the architects.

A New Hotel in Piccadilly.

After a lapse of ten years' work has been resumed on the new Park-lane Hotel, known to nearly a generation of Londoners as the Bird

Cage Hotel. Five Yorkshiremen and a Scotsman are responsible for the continuance of the work, and they hope to give London within fifteen months a super hotel capable of accommodating 600 persons. The contract, which has been secured by Messrs. Higgs & Hill, amounts to about £300,000.

ROYAL INSTITUTE OF BRITISH ARCHITECTS

Final and Special Examinations.

THE Final and Special Examinations, qualifying for candidature as Associate R.I.B.A., were held in London from July 8 to 16. Of the 62 candidates admitted (one of whom took Part II only), 42 passed, and the remaining 20 were relegated. The successful candidates were as follows:—

K. W. Aimer (Special), W. J. Allcorn, G. H. Alsop, C. E. A. Andrews (Special), B. W. S. S. Baily (Special), G. M. Bhuta, W. A. F. Bowen (Special), G. D. Channon (Special), A. O. Chatterley, H. Conolly, J. B. Cooper, C. P. Fahy (Special), E. Forster, R. S. D. Harman, B. S. Hume, A. F. Ibrahim* (Special), J. G. King, F. J. Lander, G. L. Martin, J. A. Metcalfe, J. C. Miller, J. H. Parker, C. T. Prangnell, W. J. B. Price, G. E. Read, A. D. Rix, N. Rizkalla* (Special), L. Senyard (Special), P. L. Sharma, J. R. M. Simpson (Special), E. S. Smith, H. W. Stokes, K. S. Tayler, A. J. Thompson (Special), W. Tocher, A. A. G. Toone, E. G. Turner (Special), E. Unwin (Special), F. T. Winter (Special), J. A. Woodgate (Special), K. F. Wray, F. H. Wrigley.

*These candidates are not British subjects, but took the examination for the purpose of obtaining certificates to that effect.

SPECIAL EXAMINATION IN DESIGN FOR FORMER MEMBERS OF THE SOCIETY OF ARCHITECTS.

The Special Examination in Design for former members of the Society of Architects to qualify for the Associateship was held from July 8 to 13. Of the 23 candidates admitted, 19 passed and the remaining four were relegated. The successful candidates were as follows:—

W. H. Adams, E. R. Bill, F. C. Button, E. A. Chilton, H. Collins, S. H. Collins, C. W. Fox, J. O. Hughes, G. W. Jackson, J. C. F. James, E. D. Jones, D. S. Macphail, J. E. Marshall, D. G. Millett, T. O'Beirne, C. J. Picton, T. G. Price, S. G. Scales, W. J. Werry.

EXAMINATION IN PROFESSIONAL PRACTICE FOR STUDENTS OF RECOGNISED SCHOOLS EXEMPTED FROM THE FINAL EXAMINATION.

The following candidates passed this examination, which was held on July 14 and 16:—

A. M. Allen (Architectural Assoc.), F. N. Astbury (Liverpool Univ.), H. L. Barton (Liverpool Univ.), A. E. Cameron (Architectural Assoc.), J. C. Clark (Robert Gordon's Colleges, Aberdeen), F. H. Crossley (Liverpool Univ.), P. Cutbush (Architectural Assoc.), T. V. Deas (Glasgow Sch. of Arch.), L. G. Farquhar (Glasgow Sch. of Arch.), W. Glashan (Robert Gordon's Coll., Aberdeen), F. E. Green (Arch. Assoc.), J. T. W. Greenidge (London Univ.), H. H. Khan (Architectural Assoc.), R. S. Lawrie (Robert Gordon's Coll., Aberdeen), Miss D. A. Lewis (Architectural Assoc.), H. J. Louw (Architectural Assoc.), Miss E. Meikle (Architectural Assoc.), C. A. Minoprio (Liverpool Univ.), R. H. Morrison (Robert Gordon's Coll., Aberdeen), J. H. L. Owen (Liverpool Univ.), W. Percik (Architectural Assoc.), F. L. Preston (Architectural Assoc.), F. Roscoe, Junr. (Architectural Assoc.), C. C. Shaw (Liverpool Univ.), Miss F. T. Silcock (Liverpool Univ.), A. M. Stewart (Robert Gordon's Coll., Aberdeen), H. Thearle (Liverpool Univ.), A. G. Walker (Glasgow Sch. of Arch.), Miss M. A. M. Wall (Liverpool Univ.), T. T. Wills (Liverpool Univ.), J. W. Wood (Architectural Assoc.), T. R. Wood (Robert Gordon's Coll., Aberdeen).

COMPETITION NEWS

Shuttering Competition.

Major Wightman Douglas, a former Housing Commissioner at the Ministry of Health, has been engaged recently examining the entries for the shuttering competition. A committee is to inspect models illustrating the methods submitted by certain selected competitors. There have been altogether 201 valid entries, but some of the systems are regarded as quite out of the question for practical use.

Bathgate School, West Lothian.

Mr. T. P. Marwick, F.R.I.B.A., the assessor in the limited competition for a technical school and an R.C. school at Bathgate for the West Lothian Education Authority, has made his awards as follows:—1 (for both plans), T. Aikman Swan, A.R.I.B.A., F.S.A., 42, Frederick-street, Edinburgh; 2 (£100), Messrs. Reid & Forbes, 7, Ainslie-place, Edinburgh; 3 (£50), Messrs. Thomas Roberts & Hume, 22, Engine-street, Bathgate. These awards have been confirmed by the Education Authority.

Australian War Memorial, Canberra.

Competitive designs are invited for the Australian War Memorial at Canberra. The competition is open to architects of Australian birth wherever located, and in order that competitors who are abroad may be placed on the same footing as those in Australia, the conditions governing the competition will not be available in Australia until August 15, at which date they will be available at the Office of the High Commissioner, Australia House, Strand. To ensure that the same working time is allowed to all competitors, the competition will close simultaneously in Australia and London on March 31, 1926, at noon, on which date designs from architects in Europe will be received at the Office of the High Commissioner in London. Intending competitors should communicate with the Official Secretary to the Commonwealth of Australia, Australia House, Strand, W.C.2.

*Enlargement of Carnegie Hall, Dingwall.

The Competitions Committee of the R.I.B.A. call the attention of members to the fact that the Conditions of the above Competition are not in accordance with the Regulations of the R.I.B.A. The Competitions Committee are in negotiation with the promoters in the hope of securing an amendment. In the meantime members are advised to take no part in the competition.

	Particulars published in "Builder."	Sending in date.
War Memorial, Pontardulais, to cost up to £600. Apply Mr. H. M. Gibbon, Aberdare House, Pontardulais, Glam.	—	Aug. 22
Copenhagen Bridge. Three premiums, highest 15,000 kroner. Apply C. Eng's Office, Town Hall, Copenhagen. Dep. 100 kroner	April 24	Sept.
Wolverhampton Hospital. Premiums: £200, £150, £110. Mr. T. R. Milburn, F.R.I.B.A., Assessor	May 22	Sept.
Drammen Bridge (Drammenselven). Premiums: 10,000 Norwegian crns., 8,000, 6,000. Apply Gov. Eng., Drammen.	May 29	Oct.
Newcastle Fire and Police Station. Premiums: £500, £300, £100. Mr. F. S. Worthington, F.R.I.B.A., Assessor.	June 12	Oct.
Argentine Institute. Premiums 10,000, 6,000, 4,000, 3,000, 2,000 gold pesos. Apply parties, 35, Old Queen-street, S.W.1	April 24	Dec.
New Buildings for Liverpool College, Mossley Hill. Sir Giles Gilbert Scott, R.A., Assessor. Premiums: £500, £300 and £200. Apply to J. H. Lintern, Secretary, Liverpool College, Sefton Park-road, Liverpool	—	1926 Jan.

*Competitions when "warned" or vetoed by R.I.B.A. are Starred.

Porch and Tower, St. Mary's Church, Pimlico.

MR. H. S. GOODHART-RENDEL, Architect.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

New York Cathedral and some Theories.

SIR,—As the note to which your correspondent refers in his letter on this subject somewhat misses the point I wished to emphasise, I should like with your permission to offer some reply. The root of the whole criticism is not as Mr. Randolph describes it "the familiar assumption that there can be no such thing as Modern Gothic." I was not concerned and never raised so abstract a proposition. The root of my criticism was that the mere imitation of Gothic forms, separated from the law of their own growth was not the way to reach it. The mistake of the writer lies in leaving out the human factor, and seeing in Gothic only the forms, the arch and the vault, proportional system, mouldings, etc. This is not the way to interpret the Gothic of the 13th century.

What we have to ask is whether the conditions, the approach and outlook on life, the organisation of labour under industrialism tend to produce the Gothic spirit? Or are we enforcing a mechanical and unenlightened imitation in the name of the tradition which it falsifies, as the same thing? I don't doubt for a moment the permanent significance of these forms or their "basic reality," and it is because I do not doubt it, that I detest the unreality which gives us a sham thing untouched by the spirit which moved the Gothic, as the same thing. Is it a "prejudice or obsession" to dislike such unreality? yet Mr. Randolph would appear to like it.

To me the reality of "salesman's architecture" which we see so paramount to-day is preferable to the falsity of such imitation, which is only a cloak to our own sterility. It is the spirit which governs the form. Corporate impulse evolved them, and corporate union can only sustain them. But what union is sustained by "office" Gothic executed by mechanical labour?

Mr. Randolph complains that I suggest no clearer alternative than "a more robust and genuine form of building." Though not in itself a bad alternative to suggest, I do really suggest much more than this, and include much more, and what the writer asserts that I exclude, I do not exclude at all. For that were to exclude what has once had truth and reality for its directing force. But life interpreted through a paramount industrialism for material ends has not the freedom for Gothic, which was communal and brought a corporate strength of vital craftsmanship through the inspiration of its life. Gulfs divide us from any such union, so long as labour registers mechanically the office drawing of the architect for in such a way materials yield up no secret; thought and imagination find no expansion. Such mechanical registration may give us a Bush Building, but not a Chartres Cathedral. But why should we continue to drag in Gothic at all, when as a nation we neither feel nor act in the spirit which produced it? To me this is all over, and shows only the similitude of life, and things will be better when we more generally recognise that this is so. Therefore to go on building pseudo-Gothic cathedrals is to perpetuate an unreality which a later age will abhor. That I should ignore, as the writer suggests, the permanent significance of Gothic forms will appear strange to any one who knows with what constant advocacy I have upheld the Gothic tradition. But what I ask is that we should reverence and understand it enough, by getting down to the sources out of which its forms grew, not to plagiarise and caricature it.

All this is, however, only half the matter, though the alternative schemes such as I am challenged to produce by Mr. Randolph suggests the patent pill rather than fundamental remedy. And yet there is at the present time something

to which we may look, pregnant with vast issues, whereby the spirit of the nation may find liberation towards more creative expression. I look at the art of the East—of the so-called subject races—and see in temples and other buildings such as Amanda, Boro-Budur and Angkor, that which reveals in the miracle of their inspired achievement, a help toward amelioration. The portent, so menacing in some minds—of the rapidly growing confederation and race-consciousness of the East has still something for us of benefit if it brings liberation from our own too self-centered and static outlook. As our contact with Eastern peoples becomes more receptive, to learn as well as to rule, we shall expand from ideas which have become case-hardened from want of taking in ideas. Thinking we stand we are perilously in danger of falling. There is liberation I believe through the East, in absorbing more of ideas directed towards contemplation and self-knowledge—a spiritual anodyne to our harder, narrower administrative convictions.

Religion, the sense of beauty, the attachment to ideals, to the contemplative life, modified and transfigured the art of Eastern Europe in the 8th and 9th centuries, so now new and more enlightened interpretation of Eastern culture will add the strength that we need, and then, whether we build in the forms of Gothic, Classical or Byzantine will appear secondary to the impulse which, once more inspired by religion and contemplation, transfigures all that we achieve.

THE CORRESPONDENT.

Erecting a Small House.

SIR,—I am proposing to build a small house costing perhaps £900 to £1,000. It seems hardly necessary to employ an architect as many builders could do what is required. Can any reader advise me whether, if the builder is a man of good repute, a legal agreement is necessary or desirable, and if so, what form it should take? If it is considered that an architect should be employed, about what would be the fee to see the matter through?

"SUSSEX."

[*We do not agree with our correspondent that "it seems hardly necessary to employ an architect," as the modest fee of about £50 which "Sussex" would pay for competent advice would amply repay him.—ED.]

The Vagaries of Architectural Competitions.

SIR,—Anent my letter printed in your issue for July 31, I observe that "Justitia's" indictment in to-day's *Builder* avails any reference to what was said about blameworthy awards "made by assessors of excellent repute" in the past. He describes my note as the climax of an extraordinary doctrine that no competitor has a right to protest when weary weeks of work have been wasted by unfair decisions by referees. Not so. On the contrary, let me assure the writer, I have consistently endeavoured to point out in print to the utmost of my ability when such discrepancies have happened, and have seldom, if at any time, failed to support all justifiable protests of the sort. For example, in 1890, when Professor Roger Smith, as assessor, awarded the first premium to a competitor who had taken the liberty of adding 6 ft. to the width of the frontage more than the plan of the site issued with the conditions had shown, for Whitfield's Tabernacle in the Tottenham Court-road. Naturally, there was a rumpus and a correspondence followed in the professional journals. My comment about the issue on that occasion was, do the writers "really believe the Institute will move in the matter? Did it ever do so in any case of the kind?" No, no. When Mr. William Woodward's motion on the matter was subsequently brought forward it was ruled out of order on the ground that the question was strictly an affair as between the promoters and the assessor. So that was that! It is only one out of not a few which might be mentioned. The building erected was not, how-

South Burlingham Church.

ever, the design chosen in this competition, and the result is not ideal! J. M. Brydon was one of the unsuccessful competitors and he was also relegated, with similar architectural results, when Robert Walker's design was chosen for Kensington Town Hall. These were two very sad cases, and I recall another of anterior date when I published a rejected design by E. W. Godwin alongside of the fearful selected one to demonstrate the injustice of such a choice. Mr. Henthorne Stott describes my letter as an "inversion of wisdom and justice." I am sorry, but others may judge differently. I saw his letter in *The Builder* of July 17, with a section of his scheme for the Art Gallery at Manchester. My experience leads me to the opinion as I respectfully stated, that the sooner the controversy about this Art Gallery competition is closed the better for all concerned.

MAURICE B. ADAMS.

R.I.B.A. BOARD OF ARCHITECTURAL EDUCATION

Conference with Teachers of Building.

As we have already recorded, on Tuesday, July 28, the Board of Architectural Education of the R.I.B.A. held a Conference with the representative teachers of building who have been undergoing a course in London arranged by H.M. Board of Education. The Conference took place (says an official communiqué) in the R.I.B.A. Galleries and was largely attended. The Chairman of the Board of Architectural Education, Mr. Maurice E. Webb, D.S.O., M.C., presided, and papers were read by Professor Beresford Pite and Mr. M. S. Briggs, H.M.I. on the Teaching of Building Construction from the Architects' and from the Teachers' points of view respectively. In the subsequent discussion the following spoke:—Mr. A. R. Sage, M.B.E. (Principal of the L.C.C. School of Building), Mr. J. W. Riley (Head of the Building Department, Rochdale Technical School), Mr. W. W. Hitchins (Lecturer in Building Construction, University College, Reading), Mr. Donald Cameron (School of Architecture, the Architectural Association), Mr. E. H. Evans (School of Architecture, the Architectural Association), Mr. C. B. Howdill (Leeds), Mr. T. P. Bennett (Head of Department of Architecture Surveying and Building, The Northern Polytechnic), Mr. F. E. Drury (School of Architecture, Manchester University), Mr. G. J. Grantham (School of Architecture, Manchester University).

At the conclusion of the Conference Mr. Hugh Davies, H.M.I., in a short speech, moved a vote of thanks to the Chairman. The teachers subsequently inspected the following examples of architects' working drawings, which were exhibited in the Galleries:—Adelaide House, London Bridge (Sir John Burnet, R.A., & Partners), Britannic House, Finsbury-circus (Sir Edwin Lutyens, R.A.), Tetton House, Kingston, Somerset (Mr. H. S. Goodhart Rendel), Bush House, Aldwych (Messrs. Helml & Corbett).

BRITISH ARCHÆOLOGICAL ASSOCIATION
CONGRESS AT NORWICH

By P. H. DITCHFIELD, M.A., F.S.A.

THIS venerable antiquarian Association held its eighty-second Congress during last month, at the ancient city of Norwich as a centre, pouring into many parts of the historic county of Norfolk, visiting Great Yarmouth, Thetford, Litcham, East Dereham, countless churches, earthworks, manor houses and other historic buildings for which the shire is famous. Norfolk is justly renowned for its archæological treasures, and also has an active and learned Archæological Society, the members of which co-operated whole-heartedly with the Association in making the Congress successful, and in explaining the various antiquities and sites which were visited during the week. The officers of the Association present were Mr. Charles E. Keyser, M.A., F.S.A., President; Mr. E. Reginald Taylor, F.S.A., Hon. Secretary; Mr. Ernest A. Kent, Organising Secretary; the Rev. P. H. Ditchfield, F.S.A., Editor; Mr. Francis Weston, F.S.A., Hon. Treasurer; Mr. P. M. Johnston, F.S.A., &c. The Patrons of the Congress were H. Prince Frederick Duleep Singh, M.V.O., F.S.A., the Lord Mayor of Norwich, Dr. Pope, the Bishop and the Dean of Norwich, the Misses Colman and Mr. J. H. F. Walter, F.Z.S., and the Reception Committee consisted of Mr. W. R. Rudd, Mr. B. Cozens-Hardy, Mr. L. G. Bolingbroke, Mr. E. M. Beloe, Mr. R. F. E. Ferrier, F.S.A., and Mr. R. H. Teasdale. The headquarters of the Congress were fixed at the interesting and ancient Maid's Head Hotel and the Royal Hotel, Norwich.

Monday, June 29.

We arrived in the city in time for luncheon at the hotels, and then proceeded to inspect Norwich, the first place being—

ST. PETER MANCROFT.

At St. Peter Mancroft Church the visitors were received by the vicar (Canon Meyrick), who afterwards outlined the history of the fabric, and pointed to its many features of interest. With regard to the title "Mancroft," Canon Meyrick said it was generally held to be derived from "Magna crofta," a great open space used in ancient days as a tilting field. A local antiquary, whose opinion was not to be despised, suggested that was a wrong assumption, and that the name "Mancroft" came from "Man-resh's Croft." The Canon specially called attention to the absence of any chancel screen in the church. That fact had a special interest in East Anglia, because in 1281, at the peasants' revolt, the great church of North Walsham in Norfolk was destroyed, and when (according to Mr. Francis Bond) it was rebuilt, it was the first Perpendicular church not to have any chancel arch. More characteristic of a church without a chancel screen was the gorgeous church of St. Nicholas at King's Lynn.

THE GUILDHALL.

On arrival at the Guildhall the visitors were greeted by the Lord Mayor in the Council Chamber. In some remarks on the history of the building he incidentally referred to the Guild of St. George, founded in 1385, and said that in 1417, when Henry V gave his charter to the municipality, he conferred a charter on this Guild, licensing it to hold property to the extent of £10. Its recognition as part of the Corporation saved it from suppression in the reign of Edward VI. In 1731 the St. George's Company voluntarily agreed to deliver up to the Corporation all their charters, books and records provided the city would pay their debts, which it promised to do, and so this ancient company, after an existence of nearly three and a-half centuries, became extinct.

The Lord Mayor then called attention to the pictures of local celebrities of past days which adorn the walls of the Chamber, and referring to the portrait of "Old" Crome, which hung

there for so long, said it now had a place in the Castle Museum. Among the notabilities to which he particularly pointed were Sir James Hobart, Recorder and M.P. for Norwich in 1596, who contributed to the cost of rebuilding the Chamber; Robert Tannys (Sheriff 1509, Mayor, 1517 and 1524), a curious and notable portrait with the figure of death seizing the worthy citizen; Sir John Pettus (Sheriff 1598, Mayor 1608), a considerable benefactor to the city; Sir Peter Reade, who, according to Blomefield, was knighted by Charles V at the winning of Tunis; and Augustine Steward (Sheriff 1526, Mayor 1534, 1546 and 1556), a very powerful citizen in his day. It is on record that when the monasteries were dissolved he secured the great Dominican convent, now known as St. Andrew's Hall, from Henry VIII, for a ransom of £81. The civic insignia and plate were also shown to the company and explained in detail.

CARROW ABBEY.

On leaving the Guildhall the visitors went to Carrow Abbey, where they were entertained by the Misses Colman at tea. After this a short account of the Abbey was given by Miss Ethel M. Colman, the late Lord Mayor of Norwich. She pointed out that though the foundation had from early times been called an abbey, its true designation was Carrow Priory. It was before the middle of the twelfth century that the portion of the land on which Carrow Abbey stood was granted by King Stephen to the nuns of a church or hospital in Norwich dedicated to St. Mary and St. John, now lost sight of. In 1176 two of these nuns, named Seyna and Lascelina, probably sisters, founded a Benedictine priory there. The Abbey stood on rising ground above the marshy district which bordered the River Wensum a little way to the north. Some people thought that the word Carrow was derived from two words, "car," a marshy spot, and "how," a hill. Of the church, only the ruins remained. Unfortunately, no picture, either on canvas or in the illuminated pages of some old manuscript, had yet come to light to show what the priory church was like, but, judging from its site, from its commanding position overlooking the river, and from the number of beautifully carved and moulded stones which had been found among the ruins, it must have been a stately and beautiful building. The Prioress's house, in which they were met, was built about 1514 by Isabel Wygun, the last, or possibly the last but one, of the prioresses. No doubt the present house replaced an earlier one on the same site, or thereabouts.

The visitors were then shown over the Abbey by Miss Colman and Miss Helen Colman, and they also inspected the ruins of the church and other buildings. Cordial thanks were returned to them by the President of the Association.

THE RECEPTION.

The Lord Mayor's reception at St. Andrew's Hall in the evening was invested with all the picturesque ceremonial which has of late years come to mark such civic occasions. To strangers to the city the interior of the Hall itself with its pictures immediately created a fine impression, and their interest was further stimulated by an inspection of Blackfriars' Hall and the conventual buildings. They were conducted round by Mr. Walter Rudd, Mr. Basil Cozens-Hardy, and Mr. E. A. Kent, and in Blackfriars' Hall their attention was specially called to the only monumental slate from the Church of the Dominican Convent placed at the east end. This shows the matrices of the brasses of Edmund Hastings, and Elianore Wodehouse, his wife, their two sons, John and William, and their daughter Anne. The slab is dated 1487.

The Lord Mayor, in offering a cordial welcome

to his guests, explained that he was going to speak only for the city of Norwich, and would leave the country people to speak for themselves. "I am always glad," said the Lord Mayor, "to see people visiting our city, who see with their eyes, hear with their ears, and discern with their intellect, and are able to realise the beauties which are crowded into our old city." The President of the British Archæological Association had admitted making an attempt to survey the beautiful churches in Norwich, and had collapsed after accomplishing sixteen. He wished the President would live to complete this inventory of those churches before he handed on the torch of his office to his successor.

The Lord Mayor announced to the Association that an Ancient Buildings Committee had recently been set up in the city, whose special function would be to circumvent the machinations of all the engineers and artists in reinforced concrete who calculated only in dimensions of strain, stress, tension, and other abominations without any regard to architectural value and beauty. He wished the members of the Association every joy during their visit to Norwich, and hoped they would come again.

Mr. Charles E. Keyser, M.A., F.S.A. (President of the Association), in acknowledging the Lord Mayor's welcome, said the members of the Association would not have liked to leave St. Andrew's Hall without expressing their appreciation of the hospitality that had been offered to them. They appreciated it very much and felt sure they would have a thoroughly enjoyable visit, not only in the city of Norwich, but also in the county of Norfolk. They were looking forward with great anticipation to the week they were to spend in this wonderful neighbourhood. That was the eighty-second Congress of the Association, which was founded in 1843, just at the time of the Gothic revival. It was felt that practical use should be made of people who possessed expert knowledge and who were prepared to visit various parts of England to encourage people to take an interest in and also take care of architecture and objects of antiquarian interest. It was found shortly afterwards that local societies were being formed, and if they would refer to the Norfolk archæological records—and as an old member he had the whole series—they would find that the Norfolk and Norwich Archæological Society was founded in December, 1845. He believed they had a visit from the Archæological Institute in 1843. Unfortunately, there was later a little schism, and that society was afterwards split in two. From that there had arisen the British Archæological Association and the Royal Archæological Institute. A little while ago it was suggested and hoped that the two societies would amalgamate, but the idea did not fructify, though a very happy feeling existed between the two organisations. He (the speaker) was the President of the British Archæological Association, and also the senior member of the Royal Archæological Institute. The British Archæological Association had been to Norwich

Blo' Norton Hall.

Attleborough Church.

before (Mr. Rudd thought it was somewhere in the 'sixties), and they thought the time had arrived when they should again visit the city, but had put off their visit until now because the other society, the Royal Archaeological Institute, had come to the locality only last year. They had made a good start that day with a representative party at the luncheon. He wished to thank Mr. Rudd, Mr. Kent, and Mr. Bolingbroke for the trouble they had taken in arranging the programme for the week. He did not think there was any town or city which possessed so many ancient buildings as the city of Norwich. He hoped the Ancient Buildings Committee would be active, and that if they heard that even an old cottage was to be pulled down they would try to save it. In conclusion the President warmly thanked the Lord Mayor for the civic receptions which had been given to the Association, and also the Misses Colman for the reception at Carrow Abbey.

Tuesday, June 30.

The members of the Association started out at an early hour. Starting from the Royal and Maid's Head Hotels, the party first visited South Burlingham Church (described by Mr. E. A. Kent), with its Norman doorways, and from there went on to Ranworth Church, where they were conducted round the building by Mr. P. M. Johnston, F.S.A., and finally to Spixworth Hall, where they were entertained by Mr. and Mrs. Reginald Gurney. On their way back to Norwich a short stop was made at the Chapel of St. Mary Magdalen, which was founded by Bishop Herbert de Losinga before 1119 for the relief of lepers. In the afternoon the members met in the Deanery Garden and were conducted over the Cathedral by the Dean, and afterwards the Bishop of Norwich entertained the Association to tea in the Episcopal Palace. A short visit was then made to St. Helen's Hospital, which was described by the Rev. F. W. Bennett Symons, while in the evening a lecture was given by the Dean on "Norwich Cathedral" at the Technical Institute.

SOUTH BURLINGHAM CHURCH.

The architectural interest of the church lies not so much in its exterior, with the Norman doors and Perpendicular tower, as in its interior. The pulpit has a delicacy of carving and richness of tracery and cresting that make it comparable with any in England. Round it still faintly marked is the famous Latin quotation: "Inter natos mulierum non surrexit major Johanne Baptista." Above is a somewhat ungraceful sounding board, with a broken hour glass and stand, and beyond is the rood screen, which is generally considered as contemporaneous with the pulpit, and the work of the same artist. It is the mural paintings, however, that give the church more than a superficial interest from an archaeological point of view. On the south chancel wall is the remarkable representation of the death of Thomas à Becket. Mr. P. M. Johnston pointed out that if the yellow distemper on the walls was carefully removed the painting itself would at once be made clearer. Opposite the entrance is another mural painting of St. Christopher, the colours now partially blended

with the yellow of the wall and almost unrecognisable.

RANWORTH CHURCH.

The Perpendicular church of Ranworth, which was restored in 1903 by the late Mr. J. T. Micklethwaite, has become famous for the loveliness of the rood screen. The difficulty of obtaining stone in those days and the still greater difficulty of paying for a church built of stone brought an inevitable economy in its use. Thus there are no aisles, and most of the stonework is alternated and extraordinarily slender.

SPIXWORTH HALL.

Mrs. Reginald Gurney, who gave a short paper on the Hall, said a house undoubtedly stood on the site in Henry VIII's time. A mullioned window in the yard was a witness, if any witness was needed, of this. The main part of the house was, however, Elizabethan, and at that time the property of the Southwells. But in 1609 it was sold to Wm. Peck, and it was again sold in 1693 to the ancestors of the present owners.

THE CATHEDRAL.

In the afternoon, at the invitation of the Dean, the visitors gathered in the secluded garden of the Deanery before going on to inspect the Cathedral. The beautiful view of the east end of the fabric to be gained from this spot was greatly admired, and the Dean declared that whenever he could he liked his friends to begin their tour of the Cathedral with that delightful impression of the great church in their minds. While the visitors remained in the garden for a brief while the Dean gave a very interesting account of Herbert de Losinga, the founder of the Cathedral. Herbert was, as far as he knew, his own architect. The foundation stone was laid in 1096, and in five years from that time the eastern part was completed. Herbert died in 1118, honestly mourned by the whole country. The slab in front of the High Altar marked his burial place.

In speaking of the spire, the Dean told an amusing and thrilling little story, the truth of which he said he had had vouched for. It was customary, he said, for large flags to be hung outside the top windows of the spire on special occasions. When this was being done on the public rejoicings following the conclusion of the South African War a young sailor, who had gone up with one of the bedesmen, got out of one of the highest windows, and, clutching to the crockets, scrambled up to the weather vane and stood with his arms round it. He returned down the uppermost part of the spire and through the window quite safely.

On leaving the garden the party crossed over to Life's Green and remained for a few minutes before the grave of Nurse Cavell. Thence they entered the Cathedral and spent a considerable time inspecting the interior with the Dean as guide.

THE BISHOP'S PALACE.

From the Cathedral they passed into the Palace gardens and were the guests of the Bishop at tea in the main dining room. After partaking of the Bishop's hospitality, the visitors were shown over the more interesting parts of the Palace. The Bishop preceded this little tour by telling his guests that among other things which the Palace possessed were a Norman coal cellar, a Norman larder, and a huge kitchen with walls eight feet thick in one part and eleven feet in another. Since taxation had become so crushing he had had to give up the kitchen and use a much humbler apartment for the cooking of food. The house was renovated about sixty or seventy years ago by Bishop Pelham, who was guided by a famous architect of those days but who in these times had few friends. The chief work which he (the Bishop) had done to the Palace was to undo what that architect and Bishop Pelham did. There was a dungeon in the house where the first heretic burnt in England lived for two years.

Before leaving the Palace the President of the Association tendered cordial thanks both to the Bishop and the Dean.

ST. HELEN'S HOSPITAL.

From the Palace the party went to St. Helen's Hospital, where the Rev. F. W. Bennett Symons, the chaplain and vicar of St. Helen's Church, welcomed them in the name of the trustees and the master. Describing the hospital, he said that it was formerly known as St. Giles's Hospital and was founded by Bishop Suffield in 1250. Being of a monastic character it was dissolved by Henry VIII, but afterwards re-founded under a Charter of Edward VI as an almshouse for the aged poor, and its ample revenues were vested in the Corporation for this purpose. The institution now had a complete record of the masters from the foundation of the hospital to the present day. Up to the early part of the nineteenth century people who came there as inmates were required to bring their coffins with them. These they were wont to use as cupboards in their cubicles, but as the inmates lived too long and their coffins wore out before they were needed the arrangement was not considered to be a profitable one. The average age of the inmates was about 87, and there was one there to-day aged 96. In former days a person on becoming an inmate had also to deposit a sovereign to provide a shroud for burial. A pound had still to be given on admission, but it now went towards the funeral expenses of the inmates.

In the evening the Dean delivered at the Technical Institute his lecture on the Cathedral, illustrated by numerous lantern slides. The President of the Association was in the chair, and expressed at the close the very warm thanks to the Dean.

Wednesday, July 1st.

From 9 a.m. until the late evening the visitors made a motoring tour of a wide stretch of South Norfolk, stopping to inspect many objects of interest. The first halt was at Wymondham Church and after that at Attleborough Church. Thence the party made for Thetford, where they visited the mound and earthworks, the ancient Tudor House in White Hart-street, purchased by Prince Frederick Duple Singh, and used as a museum, and Thetford Priory. The last was inspected by the courtesy of Mr. George W. Bird. Luncheon was served at the Bell Hotel, and in the afternoon East Harling and South Lopham Churches claimed the visitors' attention. At Blo' Norton Hall the party were the guests of Prince Duple Singh at tea, and the hall was afterwards described to them. At night the President of the Association (Mr. C. E. Keyser) lectured at the Technical Institute, Norwich on "Norman Doorways in Norfolk."

WYMONDHAM CHURCH.

Here the church was described by Mr. R. V. Reynor. He said the Priory was founded in 1107 by William d'Albini, who built the church for the use of both the monks and the people but in consequence of disputes between them the Pope, by a Bull of 1249, ordered that the parishioners should have the nave and the north and south aisles, while the monks should retain the transepts, the presbytery, with its north and south chapels, and the central tower. The Norman tower was entirely rebuilt in 1400 and is now roofless. The only other remaining part of the priory, afterwards an abbey, is the gable of the Chapter House. The great western tower was built by the town in 1445 to 1470. The Italian Renaissance structure, presumably the sedilia, in terra-cotta, is the most exceptional feature of the church. The President remarked on the admirable restoration work that had been carried out and thought that the church had been treated in an exceedingly good way. He remembered seeing the fabric when it was in a very bad and neglected condition.

ATTLEBOROUGH.

At Attleborough Church the rector (the Rev. Maxwell F. Webb) greeted the party, and pointed out the chief features of interest, drawing particular attention to the fine wood screen at the west end, where it was placed in 1894. Formerly it stretched across the east end of the nave in front of the tower and the chapel arch

This church was originally Norman, but the only part of that structure surviving is the central (now eastern tower), with its passages in the middle of its walls. A description of the church was given by the Rev. H. M. Mills, and the President referred to the screen as a magnificent example. Usually, when a screen was removed it found its way into the builder's yard, and was cut up, but this was not so treated.

THETFORD.

Thetford was reached about noon. The mound there was described by Mr. E. A. Kent. But for the great loss archæology has sustained by the death of Mr. W. G. Clarke, this task would have been discharged by him, for no one was so well equipped to perform it. The Rev. H. T. Green was at the ancient Tudor House and gave a very interesting account of the buildings, which were opened as a museum in 1924.

EAST HARLING.

The visitors were much impressed with the fine old church at East Harling, and its many internal features. They were described by Mr. Philip M. Johnston, who said that the parclose screen of the time of Henry VII. was alone worth coming to see. The church was completed in 1449. The east window contains fifteenth-century glass, representing scenes from the life of Christ, and also the donor, Sir Robert Wingfield (c. 1475); the glass seems to have been kept for safety at the hall for some 200 years, but was restored to the window in 1700. The vicar (the Rev. Leonard Holt-Wilson) assisted in showing the visitors round the church, which they were loth to leave.

SOUTH LOPHAM.

The central tower of South Lopham Church has been said, next to Norwich Cathedral, to be the most important piece of Norman architecture in the country. The parapets are perpendicular. The small circular window deeply splayed externally near the west end of the original north wall of the aisle, is Saxon, and retains the wooden frame with small holes in it. This feature of the church was carefully studied. A paper on the history of the fabric was read by Mr. Cecil Upcher.

BLO' NORTON HALL.

On arrival at Blo' Norton Hall the visitors were entertained at tea in the grounds, and afterwards Prince Duleep Singh welcomed his guests in a cordial speech. The date of the present house was 1535, and from that time it had always been lived in, the names of three of the chief families who had occupied it all beginning with B—Brampton, Best and Browne.

The return journey to Norwich was then made direct, but it was not till eight o'clock that the city was reached.

(To be concluded next week.)

Font at Naclon

BACK TO METHUSELAH

By DUDLEY HARBON.

WHEN the architectural profession were busy at Newcastle listening to the speech of Sir Theodore Morison, Vice-Chancellor of the University of Durham, on "Architects and the Public," in the course of which he said: "An unhealthy literary romanticism had made us believe that modern things were always vulgar and ugly. This was absurdly untrue. . . ." an anonymous writer was writing to the Press to this effect:—

"To-day we are at a somewhat similar period; men are beginning to question this spirit of materialism, and to grope back to some of the old idealism. Hence in spirit we are like the people of Tudor times, but we have no original architecture to express it in.

These two opinions are in direct contradiction, although that of Sir Theodore Morison has the advantage in that it explains the position of the anonymous writer. But anonymous writers are, you consider, of not much consequence; possibly, but then we must consider the conjunction that provokes his statement.

The City of Kingston-upon-Hull has obtained Parliamentary powers to cut a "New street from Paragon Station to the junction of Spring Bank and Beverley-road"; this is much needed and has been projected for many years. Now, the Lord Mayor of Kingston-upon-Hull, with the best intentions, has brought before the citizens a scheme, to quote his own words, as reported in the minutes of the Housing and Town Planning Committee:—

"What I wish, therefore, to propose for the consideration of the Committee is that, in the first place, one period of architecture alone should be used; that we shall have a street, therefore, representing one distinct period. The period of architecture I suggest is the Tudor Period. I suggest, therefore, the following:—

"(1) That the elevation shall be not less than 46 ft. to the eaves, and the architecture shall be of Tudor style, as shown in the two sketches submitted."

It is unnecessary to quote more, for the remaining three suggestions but extend the explanation of the scheme, and the manner in which, in the Lord Mayor's opinion, it should be carried into effect.

With the main suggestion, the whole profession of architecture will be in accord, that "in the first place, one period of architecture alone should be used"; though the choice of the word "period" does not seem completely to cover what the Lord Mayor desires, namely, as I understand him, harmony. On various grounds I have ventured to protest against that section of the report reading:—"And the architecture shall be of Tudor Style."

I do not propose to recapitulate my arguments, which in the first case were addressed to the man in the street, and not in particular to the architect or the reader interested in architecture. To these I write now, on entirely different grounds.

Whether the present is at all like the period of the Tudor need not long detain us. The Tudor was the first glimmering of the Renaissance—the discovery of the past—men looked backward. In many cases they look backward yet; we have not escaped from the Renaissance though the strong trend of thought and the methods of teachers and investigators and historians are in the opposite direction—towards the future. We are making a prodigious effort to shake off "unhealthy literary romanticism," and architects are undoubtedly contributing their ideas in building; these representations of their thought have no touch of the Tudor about them.

A walk in London to-day reveals the situation to any who have eyes to see. Nearly every

new building shows some deliberate effort to escape from the trappings of the past, some of them very nearly succeed, others hesitate and stretch out one hand to the old nobility of Greek or Roman birth, and the other uncertainly to the new democracy. It is what any student of society would anticipate. The emergence from the industrial confusion of the last hundred years is at last recognisably in sight to our artists; building is becoming cleaner and more vigorous and healthy, like the nation.

Where these buildings chiefly fail is due to the conservative love of fires to warm and cheer, and an individual assertiveness particularly English, and not altogether reprehensible, when directed in the right path. To these traits must be added a new comer not yet assimilated, namely, Wireless; the poles of the aerials have not yet accommodated themselves to the architectural scheme of many buildings. What will happen to roofs that are not flat when flying becomes a commonplace I will not attempt to forecast. Though flying will, like the motor, hasten the straightening of our bent and twisted cities.

On to this satisfactory though slow evolution of a modern city the Lord Mayor of Hull would affix a reproduction in modern terms of a Tudor street. Architects having misplaced their sketch books, must scour the countryside for vestiges of Tudor, or buy one of the many big illustrated volumes that deal so fully with the period which they have forgotten—so is "tradition" recaptured in the modern world. They must soak themselves in Tudor, in the hope that they will find in the contemporary thought contained in the writings from that distant time similarities with our own. My prolonged reading of the reports of the Historical Manuscripts Commission does not lend much support to any happy issue out of their affliction.

True the resources at the disposal of the reviver are more liberal than at any other period in history. But imitation is not art. It does not even require an artist to collect the raw material; any antiquarian, any photographer, with a smattering of archæological knowledge, can amass enough examples to last a lifetime, and the result will be dry bones, a record of the past worth keeping, but not worth repeating.

The scene painter, the poet, the artist, the actor are all endeavouring to escape from these silly shackles; only in architecture can the public for a moment forget the reality, and get back to the romantic; but such a retreat is at the expense of architecture. The other impermanent arts might with less injury thus gambol for the public entertainment; but the reciter of other people's poetry is not a poet, he is an elocutionist. And these artists, exercising their antiquarian bents or those of their patrons, are not thereby forwarding their art or their age.

And all the time, however faithful a reproduction they may make, the conditions of life, the tools, the technique, the materials, to omit all the inherited impulse of the designer, conspire to defeat their aim—the recapture of a glamour that is supposed by the fearful to lie in the bosom of the past. The Tudors paid scant deference to the Gothic, that had been the glory of their grandsires. If we are, as the writer of the anonymous letter which I have quoted suggests, "like the people of Tudor times," who "sat upon the arch and squashed it," we shall not spend much time, "weeping over the glory that was Greece, the grandeur that was Rome."

Nobody wishes to disparage the past. We are better employed in trying to understand the source of all that was estimable than in dwelling upon witchcraft and burnings. So all art worth the name is a revelation, not a repetition; however persuasive.

Easthorpe Hall, near Malton, Yorks.

Easthorpe Hall was originally a farmhouse, and part of the Castle Howard estate. Somewhere about the end of the eighteenth century it was altered and enlarged into the Dower House by John Carr, of York, the predecessor of the architects for the present alterations, and about 1840 it was occupied by Charles Smithson, a London attorney, the youngest son of a lawyer of local repute, a Bailiff of the Borough of Malton and a close friend of Charles Dickens. The novelist frequently stayed at Easthorpe Hall, enjoying many pleasant rides through its charmingly wooded surroundings, and he wrote the developing chapters of *Martin Chuzzlewit* in the room which is now destined to become the study of Lord Grimthorpe, a member of the famous Yorkshire banking firm of Beckett. All the rooms which bear the imprint of the famous architect and noted writer have been retained in their entirety, and form the main central block, with new wings projecting to the north and forming a new entrance forecourt. The alterations and additions harmonise with Carr's work, and are restrained and quiet. The walls are of local limestone, the roofs are covered with greenish-grey Westmorland slates, and the fall pipes and gutters are of cast lead. The contractors were: Wm. Anelay, of York (builder); G. N. Haden & Sons, of Manchester (heating engineers); Thorne & Allen, of York (plumbers); Green & Smith, of Leeds (electricians). The architects are Messrs. Brierley & Rutherford, of York.

Masonic Buildings, Norwich.

The design which we illustrate this week for additional accommodation to existing Masonic premises in Norwich was recently placed first in a competition limited to architect Masons in Norfolk. Messrs. Edward Boardman & Son acted as assessors, the design by Mr. E. H. Buckingham, of Messrs. Morgan & Buckingham, being placed second. In the winning design available land at the back has been utilised, and the existing premises altered to give proper access to the new building on the ground floor. Owing to the desirability of arranging for the work to be built in portions, the new Temple was placed on the ground-floor level, and consequently can, with the compartments requisite in connection with it, be proceeded with as a first instalment. The mezzanine floor, which was made possible owing to the height of the Temple, together with the top floor, being the second portion. All this work can be done without interfering with the present building, and its uses as a club, and Masonic meetings can be carried on uninterrupted. The third instalment would be the alterations necessary to the existing buildings, the existing kitchen, which is at the top of the present building, remaining in use until the new one is completed. An important feature in the planning is one service room serving the new banqueting room, also the dining room. The estimated cost of the new building, together with alterations to the exist-

ing one, including heating, lighting, etc., is £12,700. Mr. Stanley J. Wearing, A.R.I.B.A., is the architect.

Paddington Central Baths.

The new Public Baths and Washhouses (Central Establishment), Paddington, which we illustrate this week, have been erected from the designs of Mr. Herbert Shepherd, F.R.I.B.A. The principal entrance, which aligns with the centre of the north end of the Queen's-road, has been designed to meet the dual needs of a baths establishment and a public hall, also to facilitate the working arrangements for the use of the buildings in either capacity. The separate entrances for men and women are approached from Queen's-road through a portico built in Portland stone, about 44 ft. long and 10 ft. wide. The front is carried upon coupled columns and has Cornish granite flooring, steps, etc., with brick and stone flanking pavilions at either end. The entrance porch is enclosed by wrought-iron gates. The main entrance hall is carried out in glazed terra-cotta, oiled teak woodwork and panelled plaster. The fireplace is finished with enamelled tiles in two colours, with a black marble hearth. The devices modelled in plaster in the spandrels of the arch over the fireplace are designed with a portcullis superimposed upon a Tudor rose. The portcullis is the main feature of the arms of the Abbey and City of Westminster, and recalls that at one time the Abbots of the Church of St. Peter, of Westminster, held the land upon which the buildings now stand. The entrance hall is reached through the men's and women's vestibules on either side of the main ticket office. It is two stories in height and contains the principal staircase, with a balcony to the first floor and is partly top-lighted from a decorated glazed dome. Immediate access from the hall is given to the first- and second-class swimming ponds, and the men's and women's private baths, thus obviating long corridors.

The first-class swimming pond is 100 ft. long and 35 ft. wide. It is provided with a portable temporary floor and platform for use during the winter months for meetings, concerts, etc. The collapsible dressing boxes are of teak and fold back against the walls, forming a wood-panelled lining and dado some 7 ft. high. At each end of the bath are large dressing-rooms, with lavatories, which in the winter months will serve for the use of artistes and possibly as refreshment rooms. There are five direct exits to the street on the ground floor and four from the balcony and gallery on the first-floor level. The walls are generally of glazed terra-cotta with a plastered barrel ceiling. The hall has side lighting in addition to the top-lighting from the roof lantern. The flooring of the bath platforms in this and in the second-class pond is of special non-slip moroccan tiling. The second-class swimming pond is 75 ft. long and 30 ft. wide, and a large dressing-room is provided on the north side. It may be entered from the rear of the premises, near the public laundry entrance, the ticket office being so placed as to allow for its use for the bath and the laundry. The walls are built finished in glazed brick with coloured bands of the same material. The lantern and roof-light have been specially designed. The private slipper bath halls are situated east and west of the main entrance. They are top-lighted and have glazed brick walls, terrazzo floors, enamelled slate divisions, and fireclay baths. There are twenty-nine baths for men and thirty-four for women. The public laundry is entered from the private roadway on the north side from Porchester-road, and contains thirty washing troughs, three hydro extractors and thirty drying horses. The ironing room has three mangles, tables and heating stove. A waiting room, lockers and lavatories are also provided. The establishment laundry is easily accessible for service from the swimming baths. The aeration plant is on the roof.

Generally the buildings are built in stock and Fletton brickwork, with red and purple facings on Porchester houses frontage and Portland

stone facings to Queen's-road; the sloping roofs are slated with Cornish slates, and the flats asphalted. Internally the wall finishings are terra-cotta, glazed brickwork, and painted plaster; the floors to the lavatories and pond platforms are tiled; the slipper bath floors are finished with terrazzo paving; and the main entrance hall is marble paved. The windows generally are of steel and gunmetal, and the doors and dressing boxes are of teak. The whole of the establishment is lighted by electricity from the generating plant, and safety electric lighting in the licensed hall is also provided off the Company's supply. Should either fail, the buildings can be still fairly adequately lit by means of a change-over switch installed in the baths generating room for this purpose. The quantities were taken out by Mr. W. H. Webber, F.S.I. The engineering equipment was designed by and installed under the supervision of the Consulting Engineer, Mr. Wingfield Bowles. Mr. William Lake was the clerk of works.

The contractors and sub-contractors were as follows:—Contractors for the buildings, Perry & Co. (Bow), Ltd.; contractors for the engineering, Z. D. Berry & Sons; together with the following firms:—Blackburn, Starling & Co. (electric generating plant); "Turn-over" Filter Co. (filtering plant); A. D. Dawnay & Sons (steelwork); Siegwart Fireproof Floor Co. (fireproof floors); Hathern Station Brick and Terra-Cotta Co., Ltd. (terra-cotta); the Leeds Fireclay Co., Ltd., and the Farnley Iron Co., Ltd. (glazed bricks); Empire Stone Co. (reinforced concrete ponds); Ragusa Asphalte Paving Co., Ltd. (asphalte); Gilbert Seale & Son (stone and wood carving); F. Bradford & Co. (artificial stone); Roberts, Adlard & Co. (roof slating); Art Pavements and Decorations, Ltd. (marble paving); Wimer & Sons, Ltd. (enamelled slate divisions); Carter & Co. (London), Ltd. (tiling and terrazzo paving); George Wragge, Ltd. (diving platforms); Yannedis & Co. (ironmongery); Jos. F. Ebner (parquet flooring); A. R. H. Maxted, Ltd. (bronze grilles and ironwork); Geo. Wright (London), Ltd. (grates and wrought-iron gates); J. A. King & Co. (pavement lights); E. Busby & Co. (mixing valves and floor gratings); Williams, Gamon & Co. (Kaleyards), Ltd. (steel and bronze windows); the British Challenge Glazing Co. (glazed dome and fire-resisting glazing); Thos. Bradford & Co. (laundry plant); R. Brightwell (electric lighting); Veronese (fibrous plasterwork); Tylors (Water and Sanitary), Ltd. (fire hydrants); Mellows & Co., Ltd. (roof glazing); G. A. Williams & Son (sunblinds); Mander Bros. (paints).

Recent Domestic Work.

The three houses shown on the drawing on page 253 have been completed recently from the designs of Mr. Charles B. Pearson, F.R.I.B.A. Mr. Simpson's house was built as shown by Messrs. H. Hillman & Sons, of Morecambe. The other two houses were modified in execution. The house for Mr. Holder was built by Messrs. Parkinson & Sons of Lancaster; and the farmhouse at Arkholme by Messrs. Rainey Brothers, of Barrow-in-Furness.

Fonthill House.

We illustrate this week two perspective drawings of Fonthill House, now on exhibition at the Royal Academy. Messrs. Detmar Blox & Billerey are the architects.

Tudor-street, Hull.

The suggested architectural treatment of the proposed new thoroughfare, which has been designed by Messrs. Wheatley & Houldsworth, architects, is discussed in the article "Back to Methuselah," by Mr. Dudley Harbron, on page 245.

Porch and Tower, St. Mary's Church, Pimlico.

This new work, illustrated in the perspective drawing on page 241, has been designed by Mr. H. S. Goodhart-Rendel.

The Proposed new Tudor Street from Paragon Station to Beverley-road, Hull. Design by MESSRS. WHEATLEY & HOULDSWORTH, Architects.

THE ROYAL ARCHÆOLOGICAL INSTITUTE

By H. J. D. ASTLEY, M.A., Litt.D., F.R.Hist.Soc.

ANNUAL MEETING.

THE annual meeting of the Royal Archæological Institute was held at Newcastle-on-Tyne from July 21 to July 29 under the presidency of Sir William Boyd-Dawkins, F.R.S. Mr. W. C. Soden-Bird, of Newcastle, acted as hon. secretary of the meeting. The Institute has visited Newcastle on two previous occasions, the last being in 1884, but much work has been done since then in exploring the antiquities of Northumberland.

About 100 members assembled at 10.30 on Tuesday morning in the Council Chamber of the Town Hall, and were cordially welcomed by the Deputy Lord Mayor (Mr. T. A. Lowe).

Newcastle might, he said, be new to some of them, but it was very old in history, and they claimed, living close to the Border, to have absorbed all the virtues of the Scotsman and few of his vices. In their meetings and tours he was sure they would find much of the greatest interest.

Sir William Boyd-Dawkins responded.

The party then proceeded to visit the Cathedral Church of St. Nicholas, and were welcomed by Canon Newsom, the vicar, who introduced Mr. W. H. Wood, F.R.I.B.A., who described the building. Special attention was drawn to the severe and unadorned character of its architecture. The whole of the exterior was renewed about 40 years ago by Sir Gilbert Scott, but otherwise the present church belongs to the fourteenth century. It rose on the site of a previous church, consecrated in 1091 by Osmund, Bishop of Salisbury, a nephew of the Conqueror, and was destroyed by fire in 1216. Of the earlier church there is a portion of a thirteenth-century pier and capital in the easternmost pier of the northern nave arcade, embedded in the later pier, and left exposed to view at the Restoration. The severity of the style is seen in the fact that the piers of the arcades rise sheer up into the spring of the arch; there is no capital nor even a fillet. This mode of building is not uncommon in Northumberland. The nave is said to have been completed in 1359, the choir in 1369. The glory of this church is the tower of the west end. Originally there was a square tower with open battlements, but in the middle of the fifteenth-century a lawyer of Newcastle, Robert de Rodes, built the present magnificent perpendicular steeple with its imperial crown at the summit. From the pavement to the top of the lantern it is nearly 200 ft. high, and is divided into three stages, the lowest of which forms the vestibule of the church and is covered with a richly groined vault bearing the inscription "Orate pro anima Roberti Rodes." The font with a beautiful carved canopy was also the gift of the same munificent donor. The oldest monument in the church is that of a cross-legged knight of the time of Edward I., generally supposed to be Peter de Mauley, Earl Marshall, who died in 1307.

A visit was next paid to the Castle and the Black Gate, which were described by Mr. Hunter Blair and Mr. W. Parker Brewis, F.S.A. The Castle Keep is a monument of the time of Henry II., and is known to have been built 1172 to 1177. The Chapel, with the elegant late Norman mouldings of the arches and arcades, and the vaulting at the basement, resting on a noble central column, are specially noticeable. On the roof is a remarkable sundial, dated 1667, consisting of an oblong block of stone, poised on a pedestal at an angle of 45 degrees, marked for telling the time on the top, the two sides, and at both ends. In the Keep there is an interesting museum of mediæval and other objects, including some early specimens of breach-loading cannon; in the Black Gate is to be found a unique collection of Roman altars, from the wall, and other antiquities. Among these must be mentioned the magnificent gold fibula

from Æsica and a beautiful silver brooch of the same period. After lunch St. John's Church was visited and described by Mr. Wood. The date of its building is uncertain, but was probably *temp.* Henry I.; it is mentioned in a Charter of 15 Edward I., and the pointed arches of the arcade bespeak a date in the late fourteenth-century.

A reception was next given by the Newcastle Society of Antiquaries in the Bolbec Hall, where the guests were received and entertained to tea by Professor and Mrs. Bosanquet.

A meeting in the adjacent Lecture Theatre of the Literary and Philosophical Society followed, and Professor Bosanquet gave a lecture on the Roman Wall with lantern illustrations. The resources of the excavator had, he said, been largely extended by the researches of the last 30 years as was shown by the work done at Rutchester by such men as Lieut.-Col. Spain, Mr. Brewis, and Mr. F. Gerald Simpson. Of the work of the latter he could not speak too highly.

Another meeting was held after dinner in the same hall, when Prof. Baldwin Brown, F.S.A., lectured on English art in the Saxon Period in the light of its treatment by recent Continental writers, such as Heinrich Zimmermann, J. Brönsted, and Josef Strzygowski. These writers, to put it briefly, would derive our native art in that period from such distant sources as Armenia, or Asia Minor generally, but the professor gave reasons for holding these views to be misleading.

Roman Wall.

On Wednesday the members proceeded by motor-cars to visit the Roman Wall. Journeying westwards as far as Housesteads, stoppages were made en route to enable the party to see all interesting points on the line under the able guidance of Mr. Gerald Simpson and Professor Bosanquet. The morning was dull and heavy rain fell at Chollerford, where lunch was partaken of; the afternoon was gloriously fine. A brief halt was made at Heddon-on-the-Wall, where a notable fragment of the Roman Wall, with its ashlar facing on both sides, had been recently presented to the Newcastle Society of Antiquaries. For the most part, however, the modern road made by General Wade after the Scottish rising in 1745, runs right along the top of the old wall. The next halt was made at Rutchester, where the Fort of Vindobala is intersected by the road, and so on to Matfen Piers, where one of the mile-castles built in the south side of the Wall may be seen. Mr. Gerald Simpson, the great authority on the Vallum, speaking at Matfen and again at Down Hill, laid emphasis on the point that the Vallum, a flat-bottomed ditch running between two banks, was originally the boundary line of the Roman Province; it had no significance as a work of defence, nor except in some places did a road run along it; the defensive work was the great wall on the north, never nearer than 100 ft., and sometimes 500 yards away, which, though so often called Hadrian's Wall, was really of the time of Severus. It was built of concrete faced with small square blocks back and front, and was about 8 ft. thick. Though very few courses now remain, it is supposed to have been originally about 18 ft. to 20 ft. high. The wall was protected by a 30 ft. ditch, and a military road ran immediately behind it. This can be best seen at Lime Stone Bank. The defence of the wall was served by forts on or near it, "mile castles" and turrets. Seventeen forts can still be counted. These were permanent quarters for a garrison, with walls and ditches, and one or more gates on each side. Outside were extensive civil settlements, temples, and bath-houses, serving as a club and recreation-room for men off duty. Eight of these forts were

passed on the day's journey, of which Cilurnum, 25 miles from Newcastle, and Borcovicium, 30 miles, were visited. The "mile-castles" were built into the south side of the wall. They were roughly 50 ft. by 60 ft., with gates on the north and south, each designed for a small garrison. The turrets, recessed into the wall and spaced at the rate of two to each "mile-castle," were about 13 ft. square and had a door on the south only. On arriving at Chollerford a visit was paid to the remains of the Roman bridge over the North Lyne. This lies about half a mile below the modern bridge. The bridge consisted of two land abutments, and three piers with cutwaters facing up stream. The superstructure was probably of timber. Remains of the massive lower courses of the eastern abutment were discovered by accident some few years ago, and this was the one visited. It lies in a plantation, now about 15 yards from the bank, the river having changed its course since Roman times. The stones employed were of enormous size. Under the remains of the castle which defended the bridge there was a covered way, leading to a mill further down the stream. One of the columns which stood at the bridge even now lies prostrate, and one of the most curious remains is a large stone shaped like a barrel pierced with holes for ropes, which must have served as a pulley.

After lunch at Chollerford, the party walked, now in glorious sunshine, to the museum at Chesters, which is wonderfully rich in inscribed and sculptured stones and other antiquities from Cilurnum and other forts adjoining it. These were described by Lieut.-Col. Spain, who paid a warm tribute to the late Mr. John Clayton (1792-1890), who, he said, collected Roman remains as other people collect pottery. His nephew, Mr. N. G. Clayton (1833-1895), built the museum, and his widow continues the protection of the monuments on her estate with generosity and public spirit.

The inscribed stones begin with Hadrian; there are two of the time of Antoninus Pius, and one commemorates the building of an aqueduct at Chesters in the reign of Commodus. There are numerous religious monuments, among which the small altars dedicated to Coventina take first place; they were found with 16,000 coins and other offerings in the sacred well at Procolitia. Of curious interest are two huge stones set up in honour of a god, called Mars Thingsus, by a detachment of German soldiers; numerous stones dedicated to the Mother Goddesses, and to the old gods; and the statue of Cybele standing on a bull. There is one Christian tombstone of a class common in the Celtic West. A notable recent find is a bronze modius or corn measure bearing an official record of having been tested in the reign of Domitian. The Roman fort at Cilurnum, in the grounds of Chesters, was next visited and described by Prof. Bosanquet. Chesters is the sixth fort on the Wall, and guards the Roman bridge described above. This fort was built before the Wall, which crosses its filled-in ditch on the east and west, probably about A.D. 120, when Hadrian is thought to have marked out the new frontier by digging the great dyke which we call the Vallum. It contains over five acres, an area exceeded by only one other fort, Amboglanna. There were four main gateways with two smaller gates on the east and west. The garrison consisted of the second ala of the Asturians, Spanish cavalry. The remains in the camp are extensive, consisting of the barracks on the north, the forum and offices, and the Prætorium in the centre, and buildings of a later period further south. The treasure vault to the west of the Forum elicited much interest. The bath-house at the river side is well preserved, some of the wall still being 12 ft. high. It has the usual arrangements, but the entrance hall with seven cupboard-like recesses in its west wall is unusual.

From Chesters the drive was continued to Housesteads (Borcovicium) with remains of the Roman Wall almost along the entire dis-

tance. A halt was made at Limestone Bank, where the ditch has been driven right through the basalt, and the section is well exposed. Housestead's "mile-castle" is exceptionally well preserved, the north doorway retaining both its jambs and the springers of the arch. To reach this entailed a walk of nearly a mile over the thick wet grass, and a little further on is the fort of Borcovicium. This stands nearly 900 ft. above sea level and is the highest fort on the Wall mid-way between the two seas. There was no room for a fort of the usual pattern, hence it lies east and west. Long lying derelict, it came under cultivation about 1700, and yielded many inscriptions and sculptures which excited the wonder of eighteenth-century antiquaries. From 1822 onwards excavations have been carried on, first by Hodgson, the historian, and then by Mr. J. Clayton, who bought the property. The gates and ramparts are now more completely exposed than those of any similar site. The arrangements of the camp are the usual plan; it was garrisoned by the first cohort of Tungrians, an infantry regiment from Lower Germany. At the south-east corner there is a large cistern, formed of flags jointed with lead; a second similar cistern adjoined it. These were necessary, as the camp was situated on the side of a hill, and the surface water had to be brought to them and stored. The religious centre of the settlement lay to the south, and there was a Temple of Mithras in a hollow further to the west.

This was the furthest point reached, and after tea at Chollerford a pleasant drive back brought a memorable day to an end.

The annual meeting was held in the evening, and a very satisfactory report was presented by the hon. secretary. During 1924 there was a net gain of 20 members, and the year closed with a surplus in hand of over £300. Before the meeting an interesting lecture on the Roman Wall was given by Mr. F. G. Simpson, who dealt specially with the Vallum and its characteristics, illustrated with excellent lantern slides.

Durham.

Thursday was spent at Durham. The first visit was paid to the Castle, under the guidance of Mr. W. T. Jones, F.S.A., who gave a most interesting survey of its history and buildings. The members assembled in the Bishops' Hall, in which a series of plans showed the advance of the work from the building of the old chapel in 1072, the great building in which the Hall is situated of the time of Bishop Puiset, about 1170, to the black stair inserted by Bishop Cosin after 1660. The Castle now belongs to the University of Durham, and the shell-keep originally built in the twelfth century, and rebuilt by Bishop Hatfield in the fourteenth century, now contains rooms for students. A thorough inspection was then made, and Bishop Puiset's splendid doorway and the black staircase were particularly admired. Built, as it is, on the summit of the great hill on which also stands the cathedral, the buildings are showing signs of slipping down the declivity, and are now being underpinned, a work which is costing the University a large sum. One result of this restoration is the disclosure of pre-Norman vaulting near the chapel, which must have formed part of an original gate; these remains were inspected by some adventurous members by the aid of ladders and electric light.

In thanking Mr. Jones, the president remarked that there are evidences of an early Iron Age occupation of the site, but no Roman remains have ever been found in Durham.

The members then visited the Cathedral, where the party were welcomed by the Dean, Bishop Welldon, and Professor Hamilton Thompson, F.S.A., gave a general description of the building and its history, and afterwards conducted the members round. Durham Cathedral is so well known that there is nothing new to say about it, except to note that the foundations of the apses of the original church were discovered in 1895 and may

be seen below the floors of the feretory, which contain the Shrine of St. Cuthbert, and the adjacent aisles. A remarkable example of the progress of construction in the hands of Anglo-Norman builders, and of the appearance in Romanesque forms of the essential characteristics of Gothic structure, may be seen in the high vault of the Choir, and their development from the choir aisles to the vault of the nave, with the corresponding development in abutment.

After lunch an inspection was made of the cloisters, the Library, and the Deanery. At the evening meeting Mr. Hunter Blair gave an illustrated lecture on some minor mediæval monuments in Northumberland and Durham; these included a fine series of tomb-slabs, seals, effigies, and shields which are to be seen on the Castles of Bothal, Alnwick and elsewhere.

Hexham.

On Friday the members proceeded by train to Hexham, where the Priory was first visited and described by Mr. C. Hodges, who has done so much to elucidate its history. The known history of Hexham begins with the foundation of the church by St. Wilfred in 674; glowing accounts of this church have been handed down; for example, Prior Richard, writing in the twelfth century, gives a long account of it, and concludes by saying: "In fact, in these days such a one could not be found on this side of the Alps." These accounts and others written by Symeon of Durham and William of Malmesbury, were long looked upon as exaggerated; but the excavations made in 1907 when the new nave was begun revealed the entire plan of Wilfred's Basilica, and showed it had no parallel at the time in England or France. The crypt was accidentally discovered in 1725, and was found to be entirely composed of Roman stones, brought by Wilfred from Corbridge. As well as foundations, some remains of Wilfred's Basilica exist above ground, and show that the building was 165 ft. long by 10 in width; it terminated in a small apse, which may be seen just east of the present crossing. During the restoration the remains of the Norman apse were discovered about 20 ft. further east, and belonged to the Choir built in 1153 by the Austin Canons, who had been making use of the old church since they arrived in 1113; but they soon got dissatisfied with their small choir, and within 30 years the present grand eastern arm of the church rose round and beyond it. This was between 1180 and 1190.

In 1296 it was burned by the Scots, and the Canons do not appear to have made any effort to rebuild or to erect the nave for a long period; the greater part of the transepts, crossing, and choir may be regarded as fully developed Early English work. The present nave was only erected in 1908. An aisle across the east front for chantry altars was built in 1349, but this has disappeared. One of the most interesting relics of Wilfred's Cathedral is the far-famed "frith stol" or Bishop's seat, which was used in the Middle Ages for sanctuary, and so escaped destruction. The only other example of about the same date is in Beverley Minster. Among objects of special interest in the church must be noticed the Ogle Chantry Chapel (about 1410) and the Chantry Chapel of Prior Leschman (1480 to 1491), the old pulpit with painted panels, and the series of painted panels, representing the Dance of Death and several Bishops, which are now all in the choir.

In the crypt special attention was drawn to the interesting stone containing part of an inscription by the Emperor Geta after the murder of his brother Caracalla, with the latter's name erased, which forms part of the roof; during the rebuilding of the nave another stone, containing the remaining portions of the inscription was found, and is now built into the north wall of the nave.

After a thorough inspection of the church and remains of the conventual buildings visits were paid to the Tower of Hexham (about

1330) and the Gate House, which were described by Professor Hamilton Thompson.

In the afternoon a delightful motor run brought the members to Blanchland Abbey, described by Mr. C. Hodges. This abbey is most romantically situated in a lovely valley with wide moorlands stretching beyond on all sides. Little remains of it; of the church only the choir, north transept with aisle and tower to the north, like fountains, exist; the guest house and other buildings to the west now form "The Lord Crewe Inn," and here tea was partaken of. The nave of the church has entirely disappeared. Blanchland belonged to the Premonstratensian Order of White Canons and was founded in 1165; the remains chiefly belong to the thirteenth century. In 1752 Lord Crewe, Bishop of Durham repaired the ruins of the church and made it a parish church.

At the evening meeting Mr. W. H. Knowles, F.S.A. read a paper on the Castle of New-castle, and illustrated its growth from 1172 by many excellent lantern slides.

Alnwick.

On Saturday morning the members proceeded by train to Alnwick, where the first visit was paid to the Parish Church, which was described by Canon Mangin, Archdeacon of Lindisfarne. The present building belongs to the fourteenth century, but a few stones, sculptured in diaper pattern, built into the wall above the chancel arch, and the bases of some round piers, which were buried under the floor, speak the existence of an earlier church. In the chancel aisle are three sculptured effigies, one being probably that of Isabel, widow of the last Baron de Vesci; another is that of a young man who may have been her son and who died in her lifetime. The Castle was next visited, and described by Professor Hamilton Thompson, who first gave a clear account of the ancient families who owned it until the line of Vesci died out in 1297, and after belonging for a short period to Antony Bek, Bishop of Durham, was purchased in 1309 by Henry Percy, the head of a family whose possessions up to that time had lain chiefly in Yorkshire. This great fortress belongs to the type of early castle in which, as at Windsor and a few other places, the mount is found at an angle between the outer and inner bailey. Henry Percy and his son Henry (1315) and (1352) repaired and largely rebuilt the Castle. The most interesting portion of the outer defences is the great gatehouse belonging to this period. The present house, with its imposing array of towers, although for the most part a nineteenth century rebuilding, follows the general character of the work of the first Percys, and retains their gatehouse. Beneath the battlements, as at Bothal, is a fine row of carved shields, and on these and all along the line of towers and curtain-walls are numerous ornamental figures of mediæval soldiers in striking attitudes, said by tradition to have been placed there to frighten the Scots, but really belonging to the latter part of the eighteenth century. The Lion gateway through which the gardens are entered is a striking collection of Egyptian and Assyrian antiquities, and numerous Roman monuments found in the county.

The town of Alnwick remained unwallled till 1434; a charter of fortification was then granted and the walls were finished in 1450. The view from the battlements of the castle over the valley of the Aln is very fine.

In the afternoon the members proceeded by motor to the site of Alnwick Abbey in the Park. This, like Blanchland, belonged to the Premonstratensian Order and was founded in 1147 by Eustace FitzJohn, and colonised from Newhouse in Lincolnshire. Only the gatehouse remains above ground; but the site was excavated in 1884 by the late Sir W. St. John Hope and carefully planned out in the turf of the meadow; the circular Chapter House, entered through a straight vestibule, is very unusual.

The Priory of Hulme was next visited. This

was a house founded for Carmelite Friars about 1240 by William de Vesci, and was one of their earliest settlements in England.

The ruins, which are extensive, stand on a hill on the left bank of the Aln in a beautiful situation, three miles above Alnwick. The precinct wall still surrounds them, and they afford an unusually complete example of the arrangements of a friary. The church consisted of a nave and chancel without aisles, and the usual buildings lie to the south. In 1488 a fortified, or Peel, tower was built west of the cloister by the fourth Earl of Northumberland; in 1776 the first Duke of Northumberland built a house on the site of the western range, which was used for summer parties and known as a gazebo. Professor Hamilton Thompson was the guide here, after which the members returned from Alnwick to Newcastle by train.

Brinkburn and Warkworth.

On Monday morning the members left by motor for Brinkburn, the first stop being made at Bothal. Here the Castle was visited and described by Mr. Hunter Blair, who gave an interesting account of the families by whom it has been held from the first grant to Guy Baliol, by William Rufus, down to Sir William Cavendish in 1628, from whom it descended through an heiress to its present owner, the Duke of Portland. The chief architectural interest of Bothal centres in its noble gatehouse, and in the series of armorial shields carved upon it beneath the battlements. These are in two lines, three above and ten below. On the top line are the arms of the Black Prince as Duke of Cornwall, a unique shield; King Edward the Third and Lord Liddell; below the ten shields are those of Robert Bertram under the King, who in 1343 obtained the King's licence to make his Manor House into a castle and on each side those of his friends, such as Henry Percy, Sir William Scargell, Ogie, Delaval, and others. These shields must have looked very fine before the original colours disappeared. The gardens here are lovely and the view from the bailey over the Valley of the Coquet is beautiful. The church was next visited, and is a good example of the plain type of thirteenth-century work in Northumberland. It contains the only tomb of alabaster work in the county, that of Ralph, third Lord Ogle of Bothal (d. 1513), and his wife.

A twelve-mile ride via Morpeth brought the party to Brinkburn Priory, which was described by Professor Hamilton Thompson. The remains of this Priory of Augustinian Canons founded in the reign of Henry I. are situated on the left bank of the Coquet, which here runs through a thickly-wooded defile, and consist of little more than the church. This is a building of great interest, belonging almost entirely to the closing years of the twelfth century. It consists of an aisleless presbytery of two bays, a transept with two eastern chapels in each arm and a low tower above the crossing, and nave of six bays with north aisle. It lay roofless till 1858, when it was restored. The mingling of Romanesque with Gothic forms throughout, especially in the north doorway and the west front, make it a fine and imposing example of the work of the period.

A modern house has been built on the site of the cloister and only fragments of the monastic buildings are left.

The morning was fine but in the afternoon Warkworth Castle was visited in pouring rain. Here the party were met by Mr. C. R. Piers, F.S.A., and assembled in one of the lower rooms of the Keep, which was built about 1400, and is noticeable for combining the features of a fortress and a private residence. The Tower, containing the effigy of the Percy Lion, is a fine object. This formed the entrance to a second mansion, and between it and the Keep are the foundations of a collegiate chapel which was never completed. The Castle stands astride a narrow neck of land almost surrounded by a bend of the River

Coquet, and was the home of Shakespeare's famous Harry Hotspur. After tea at Warkworth House, by the kind invitation of Mr. and Mrs. G. Glendenning, the members visited the church, in which there is some interesting old glass, one panel representing St. Hilda and the fortified bridge over the Coquet, after which a 30 mile motor run brought them back to Newcastle.

At the evening meeting Mr. C. R. Piers gave an interesting lantern lecture on the art of Northumbria, with special reference to the recent finds at Whitby, in connection with Iona and Ireland.

Bamburgh and Dunstanborough.

On Tuesday morning the members proceeded by train and motor to Bamburgh Castle, which was described by Mr. W. Parker Brewis. In its noble situation on an outcrop of basaltic rock close to the sea shore, Bamburgh is one of the cradles of our national life; it is said by Nennius to have born the Celtic name of Dynguarydi, and it has been connected with the "Joyous gard" of Arthurian legend. Previous to this date, as the president pointed out, it was probably a settlement in the Iron Age. In 547 King Ida made it his stronghold, and his grandson, Ethelfrith, gave the place to his wife Bebba, from whom it received its name. This early Royal Burgh must be distinguished from the later fortress which after the Norman Conquest occupied the site. Nathaniel, Lord Crewe of Steane, Bishop of Durham, married one of the co-heiresses of the Forsters, into whose hands the castle had come, and purchased their estates from their creditors in 1704; dying in 1720, he left much of his property to trustees for charitable purposes. The castle was then in ruins, and between 1757 and 1766 Archdeacon Sharp, one of the trustees, restored it. In 1890 it was purchased by the late Lord Armstrong, who carried out extensive alterations and rebuilding. Thus the present buildings, while bearing the appearance of a mediæval fortress, are, as one of the party expressed it, nothing but a "magnificent fraud." The keep was originally built in 1164, and contains the castle well, 145 ft. deep, on the ground floor. The remains of a chapel belonging to pre-Norman times, and possibly one of St. Aidan's churches, are on the north wall of the inner ward. The church at Bamburgh contains nothing of much interest; in the churchyard is the tomb of Grace Darling. In the afternoon a run of eleven miles took the members to Dunstanborough Castle, which was described by Mr. Hunter Blair. Here we have a piece of genuine antiquity. Unlike the many other castles in Northumberland, it was not built as a bulwark against Scotland, but figured in many sieges during the Wars of the Roses. The great gatehouse was built by Thomas Earl of Lancaster, in 1313, and in 1380 it passed to John of Gaunt, who turned the gatehouse into a keep or "donjon," and made a new gateway to the west. During the Wars of the Roses, Queen Margaret took refuge here after the battle of Northampton in 1460, and after the battle of Hexham in 1464 the castle was taken by storm by the victorious Earl of Warwick, the King-maker. The ruins stand nobly on the isolated hill, the great gatehouse, the south curtain wall, and Queen Margaret's Tower still witnessing to the splendid work of the masons of Earl Thomas, while the work of John of Gaunt has mostly perished.

On Wednesday the morning was occupied by a perambulation of the west walls of the City of Newcastle, and visits to St. Andrew's Church and the remains of the Blackfriars' Monastery and the old Guild Hall.

In the afternoon the members proceeded to Tynemouth, where the Castle and priory were described by Mr. W. H. Knowles. Part of the walls of the nave of the church belong to the twelfth century; the foundations of the apsidal choir of that church were recovered by excavation in 1904-1905; the remains of the present building belonging mostly to the thirteenth and fourteenth centuries. The site is magnificent

and resembles that of Whitby Abbey in Yorkshire, being on the summit of a lofty limestone cliff at the mouth of the river. After tea some of the members proceeded to Seaton Delaval Hall, now in the possession of Lord Hastings.

This brought a successful week to a close. Thanks are due to Mr. W. Soden-Bird for his work as hon. secretary, and to the organisers of the meetings, and the lecturers for much valuable information. The book of the programme, with maps and plans of the principal places visited prepared by Mr. Harding-Tyler, and the members of the Meeting committee was as useful and attractive as usual.

NATIONAL ASSOCIATION OF MASTER PLASTERERS

Work of Conciliation.

THE half-yearly meetings of the National Association of Master Plasterers have recently been held at the Central Library, Blackpool, under the presidency of Mr. W. Masters, of Middlesbrough. We are informed that during the past six months the officials have been in attendance at something like twenty-two meetings of various kinds, namely, the National Allied Building Trades Employers' Executives, the National Allied Disputes Committee, the National Association of Operative Plasterers, the National Joint Council for the Plastering Industry, and with meetings of its own Executive. It is generally known that the operative Plasterers have resigned from the National Wages and Conditions Council, and on April 1 this year were without rules and agreements, and were desirous of entering into agreements with the employers of plasterers either locally, regionally, or nationally. The National Association of Master Plasterers, being affiliated with the Wages Council, was prevented by the fact from entering into any agreement other than those agreed by the Wages Council, and in order to preserve peace in the industry, strenuous efforts have been made to secure a general meeting of all concerned for a round table talk so that differences may be discussed, and a common platform reached whereby it might be possible to continue the good offices of the Wages Council in stabilising wages on a national basis. It appears, however, that the operative plasterers have taken a ballot vote of their members, with the result, we understand, that on no conditions will they return to the Wages Council.

The meetings between the employers and the operative plasterers have been marked by a distinctly friendly feeling, and it is satisfactory to know that the operatives have agreed to meet the National Allied Disputes Committee so that they may put their case before them, explaining their reasons for resignation from the Wages Council, and to offer certain proposals for the future government of the plastering industry which have been approved and mutually agreed by the two bodies concerned. The National Joint Council for the plastering industry has also had under consideration an education scheme for apprentices to plastering, and during the coming session it is hoped classes will be set up in the various technical schools throughout the country; the scheme also includes the giving of prizes to successful students, whose work will be examined by an experienced and practical plasterer. The Council have also had under consideration a new form of indenture for apprentices, which is to be put into operation at once.

The officials of the Master Plasterers Association record the continued increase in the numerical strength of its membership, and are hopeful that in the near future all master plasterers throughout the country will recognise the work done on their behalf, and hasten to affiliate themselves with the Association. The Association have decided to appoint an organiser, whose duty will be to approach all employers of plasterers throughout the kingdom.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on all matters.

They are appeal to our correspondents to submit their queries on paper of a size easily filed, and written as fully as possible, or, better still, in typewriting!—Ed.

Cleaning Porcelain Enamel Baths.

SIR,—I have always experienced difficulty in advising clients how to clean porcelain enamel baths and earthenware lavatory basins. Most of the preparations sold for the purpose contain lime powder or a similar ingredient, which soils the surface and renders constant cleaning essential. Could any reader recommend a suitable preparation for the purpose?

R. P. B.

Red Ash Tennis Courts.

North-country readers write, asking for an line specification for red ash tennis courts which it is proposed to construct on the site of an old depression, which has been filled in, the filling-in material obtained on the site from culling, being red roche (or soft, shaley sandstone). Perhaps some reader can provide such specification.

Wind-driven Electric Lighting Plant.

SIR,—Will any of your readers who have installed a wind-driven electric lighting plant for small country house lighting give me their experiences, particularly as to efficiency in low winds.

P. EDWIN STEPHENS.

Sand-Lime Bricks.

SIR,—Where can full information be obtained the sand-lime bricks so extensively used on the Continent, particularly with regard to their composition, colour, durability and method of manufacture? Have any been made in this country, and can the plant for making them be obtained in England?

RICHARD ANDERTON, A.R.I.B.A.

Building with Flints.

[REPLY TO S. S. G.]

SIR,—It is a great mistake to assume that the use of a hard impermeable material like flint is in itself a safeguard against weather, especially in rubble work where it often occurs that a bed here and there may be laid as to tip slightly inwards so that the rather leads straight into the body of the flint. It is, therefore, very necessary in good-class work to back up the wall with a 4½ in. brick shell tied in with wall ties and leaving dry cavity. If S. S. G. is in a flint district it may be possible to get experienced labour locally; but if this has to be imported will be difficult to lay hands upon men willing to travel, and the ordinary mason will probably be unable to handle the material. I may state that I live in a granite district where one frequently comes across walls 18 in. thick that let water through though appearing roughly sound and substantial.

ARCHITECT.

Rights of Light.

SIR,—In my reply to the inquiry of "Crown" given in last week's number, "an angle of light of 45 per cent." should of course read "an angle of light of 45 degrees." As it is now a common practice to set up a standard of measurement for the intensity of light, the above list's error may make for confusion, and I could therefore be glad if you would kindly print this correction.

LEX.

Waterproofing Sand-faced bricks.

[REPLY TO W. J. RENDELL.]

SIR,—There are quite a number of colourless waterproofing preparations for water-proofing brick faces without affecting the colour now on the market and advertised in *The*

Builder. If, however, the walling is not yet built (and your correspondent does not make this clear) I should recommend that cavity walling be adopted for keeping out the weather without any further treatment. I have heard of cases where the sealing of the surface of the wall by a petrifying liquid has led to condensation troubles inside, especially where the brick-work has been in cement mortar. CAVITY.

Horse Power required for Pump.

SIR,—Given the amount of water required to be lifted to a given height in a given time by a pump of known efficiency, can you tell me how may be obtained the Horse Power of the motor required for the operation? AQUA.

B.T.U.

SIR,—Can you kindly inform me what is the significance of the term B.T.U. or British Thermal Unit?

CHERCHER.

Reduced White Lead.

SIR,—I have been offered white lead described as "Reduced White Lead" and am unable to find what is meant by the term. It appears to be considerably more expensive than the ordinary type I have been in the habit of buying. Can any of your correspondents inform me whether the above is an accepted description, and if so what is the proportion of actual white lead that should be contained therein?

PIGMENT.

Rise and Go of Stairs.

SIR,—I have found in practice that the rule "twice the rise plus the go equals 23" to provide the best results, but am unable to account for the fact by any logical reason. It would be interesting to hear if any of your correspondents can throw any light upon the matter.

PITCH.

Mahogany.

SIR,—I have a piece of furniture of which the figure suggests that it is of mahogany. Very little stain has apparently been used, but the colour is considerably greyer than any mahogany of which I have had previous knowledge. Can you suggest what timber it is likely to be, and whether it is likely to be mahogany at all?

COLLECTOR.

Increase in Price of Building.

[REPLY TO "LONDON," AUGUST 27.]

SIR,—In general, a contractor is entitled to refuse to do extra works, unless they are such as are essential to the satisfactory completion of the work contracted for, or unless they are provided for in the conditions of the contract. In this case the R.I.B.A. (1909) form of contract (applicable where quantities form part of the contract) has, it is understood, been used, and clause 12 of the conditions of contract, provides for the due performance of properly authorised variations and extras. The powers given to an architect under this clause do not extend to such variations as a total alteration of the original plans or specification; but, provided the variations are as to matters of detail only, and come within the scope of his authority, and they are properly authorised under, and within the terms of, and as directed by the contract, then the contractor must carry out the extra work ordered.

If it is found, as in a lump-sum contract, that the satisfactory execution of the work contracted for demands extras, the contractor must perform them without additional remuneration; but in the case under consideration payment for extras is specially provided for under clause 13 of the conditions of contract, for variations are to "be valued at the rates contained in the contractor's original estimate."

Subject to a consideration of the above, it would appear, on the information given in this

case, that the contractor is bound to carry out the work ordered and at the contract rates. If he, without lawful excuse, fails or refuses to perform his contract, he may be regarded as having suspended the work and clause 26 of the conditions of contract is then applicable. This clearly sets forth the procedure that should be adopted by "London" in employing another contractor, and subsequently recovering from the original contractor.

Further, it may be pointed out, that if the contractor without lawful excuse fails or refuses to perform his contract, or abandons the work before completion, he becomes liable for breach of contract.

Velocity of Flow of Sewage.

[REPLIES TO "DESIGNER," AUGUST 7.]

SIR,—I would refer "Designer" to Blake's "Drainage and Sanitation," page 261, where the necessary information is set out at some length.

M. D. R.

SIR,—The velocity of flow of sewage in any drain may be found from the following formula:—

$V = C \sqrt{r s}$ where
V = Velocity of flow in feet per second.
r = Mean hydraulic depth = $\frac{\text{area of stream}}{\text{wetted perimeter}}$
in feet = $\frac{\text{area of stream}}{\text{wetted perimeter}}$

s = Fall ÷ length.

C = A constant varying according to different authorities, but for pipes of 3 in. to 9 in. diameter usually taken at from 90 to 100.

D = Diameter in feet.

When a sewer is flowing full or half-full the value of $r = D \div 4$, in circular sewers. Various other formulae are given in the engineering pocket-books, such as Molesworth, Kempe, Trantwine, &c., but that quoted above has the advantage of being easily remembered and, provided due discretion is exercised in the selection of the constant C, is reasonably accurate. If extreme accuracy is required a recently devised formula (based upon the researches of Reynolds, about 1884, confirmed and amplified by a very exhaustive series of experiments at the National Physical Laboratory within the last few years) is now available. This takes account of such factors as the density and viscosity of liquids at varying temperatures in addition to the usual ones such as size, length and fall of pipe, and eliminates the necessity of guessing, more or less accurately, the value of C. An explanation of the formula in question, however, would take up too much space in these columns, and "Designer" is recommended to refer to a small booklet entitled "The Flow of Liquid Chemicals in Pipes," by Norman Swindin, price 3s. (Benn Bros.), if he wishes to pursue the subject further.

W. G. W.

SIR,—To find velocity of flow of sewage in feet per minute—

$55 \sqrt{H.M.D. \times S.A. \times F.}$
where H.M.D. = Hydraulic mean depth.
S.A. = Sectional area of pipe or sewer in feet

F. = Fall in feet per mile.

The H.M.D. of a pipe flowing full or half-full is always $\frac{1}{4}$ the diameter in the case of circular sewers. (See note below.)

Example: Sewer 18 in. in diameter. Gradient 1 ft. in 580 ft. Running full. Velocity required.

$V = 55 \sqrt{H.M.D. \times S.A. \times F.}$

$V = 55 \sqrt{\frac{1}{4} \times \frac{1}{4} \times 1.76 \times 9.1}$

$V = 55 \sqrt{.375 \times 16}$

$V = 55 \times 2.44$

$V = 134.2$ ft. per minute.

NOTE.—The H.M.D. is found by dividing the sectional area of the fluid by the Wetted Perimeter.

W.P. in pipe flowing full (1 ft. diam.)
 $= D \times 3.1416$

$S.A. = D^2 \times .7854$

$H.M.D. = \frac{.7854}{3.1416} = .25$

Sevenoaks.

L. F. S.

THE BUILDING TRADE.

HINTS TO BUILDERS

By J. H. BARNES, F.I.O.B.

IN dealing with the question of estimates great care should be taken to see that the estimate is sent in for the correct amount, as instances have occurred where a builder has made a gross error in his estimate and the customer has accepted the tender and called upon him to carry out the work, with disastrous results to the contractor, and this would particularly apply where a number of articles are being tendered for; if the price quoted is for each article it should be clearly stated. These elementary precautions may be the means of saving the contractor from a considerable loss.

The builder is sometimes placed in rather a difficult position in tendering as he has to give a firm price, whereas the merchants and other firms who perform special work will sometimes hedge their quotations with all sorts of terms and conditions, e.g., "subject to our approval of the detailed drawings," etc., etc., and in such cases it may be advisable for the builder to put a similar note to his tender. If the tender is not intended to be a binding one under all circumstances it should be so stated.

When a builder is sending in a very large number of estimates and would not be able to carry out, within a reasonable time, all the jobs if they were entrusted to him, it would be advisable for him to insert a clause in his estimate giving him the right "to accept the jobs should his arrangement permit." When invited to tender, the estimate must be prepared either by the builder himself or by some qualified person.

Estimating requires some considerable practice to keep the estimator in touch with prices current. The small builder can hardly find time to prepare estimates because he will be more nearly concerned in the personal management and arrangement of the details of his business, and is therefore often forced, from mere lack of time, to arrange for his estimate to be prepared by some qualified person outside his own staff, or to employ approximate methods of estimating.

Approximate estimates have a value of their own, but should not take the place of a definite estimate prepared upon proper particulars, for approximate estimates can only give approximate results; and if that is borne in mind no harm is likely to occur in dealing with a job from that point of view. On other occasions it is sometimes convenient to be able to obtain quickly an approximate price, and it is surprising how nearly correct estimates can be prepared by approximate means. Such methods, however, require very careful study and a close observation of details.

The best method for the untrained person to adopt is "cubing." "The people who know" affect to despise this method, yet it must be acknowledged that, within certain limits, the preparation of estimates by obtaining the cubical contents of the building and pricing them at an inclusive price to cover all the details of construction, is really helpful.

There are other methods of preparing approximate estimates for buildings, but we will first deal with the method of estimating by the cubic foot extent of the buildings. The usual way is to take the length from the outside dimension of the walls and the depth in a similar way, the height to be taken from the top of the footings or concrete continued to the roof. If the roof is a pitched one similar to the ordinary slated roof, the dimension would be taken to half-way up the roof.

Any outbuildings, back additions, and so on should then be measured, and by this means the length, depth and height of the building

can be ascertained. From these particulars the whole cubical contents of the building can be arrived at. If there are any chimney stacks projecting considerably above the roof these would also have to be measured.

In dealing with the question of pricing the cubical contents obtained by the methods described above, the builder will find it of very great value to construct his own schedule of prices based upon the particular class of work he is in the habit of doing, for it is remarkable how nearly the cost of one building of a particular class will approximate to the cost of a building of a similar class but slightly different size; the law of averages seems to work so that the slight differences in size and general arrangements counterbalance themselves.

Having once arrived at the approximate price for a completed building of a particular type, it should be an easy matter to add on suitable amounts for slight increases or deduct amounts for decreases in the probable cost of the work as compared by the hypothetical standard taken.

For instance, if the standard example house were finished with either stock bricks or perhaps a roughcast facing, this would be a cheaper finish than an expensive red-brick facing; but if that were the only difference in the house, this could be easily added on by a lump sum to the cost of the building when priced out at per cubic foot.

The ordinary sanitary arrangements should be included in the price for the house, but any connection to sewer or length of drain outside the house should be taken separately. Laying on the water from the company's main should also be added separately, also the electric light or gas, as these are charges which may vary very considerably in different districts.

Needless to say, the cost per cubic foot of the house would not include the garden walls or fences, and these would have to be added separately. The cost of any special sanitary fittings, heating, or stoves inside the house could be added to the total figure. The number of gas or electric points should be counted and a sum of money included for them. Any special kind of wall decoration required would also form the subject of an additional charge. Any fittings in the nature of cupboards are usually considered as tenant's fittings, and are not included in the cost per cubic foot of the building. In the case of ordinary dwelling-houses, the cost will vary from 11d. to 1s. 6d. or 2s. per cubic foot in accordance with the general arrangements, design and type of finish of the house.

Small public buildings or assembly halls would cost from 1s. 3d. to 2s. per cubic foot. The cost of commercial buildings will depend in a measure upon whether any special expense is proposed by reason of some architectural features on the elevation and the weights the floors are designed to carry.

In attempting to arrive at an approximate price per foot, the dimensions of the building should be taken in the method described above and the various items of extra cost previously suggested should be carefully gone into, and in addition a special sum should be added for work such as a sub-basement, if required, as this usually entails expensive excavation and shoring, the shoring of surrounding property, fireproof staircase, lifts, and heating arrangements.

For an ordinary commercial building in London with concrete floors, fireproof staircase, and passenger lift, but no expensive

architectural embellishments to the front cost to-day is from 2s. to 3s. per cubic foot. Should any special architectural treatment be required to the front of such a building a sum could readily be arrived at for such

In these days, when so much of the work of buildings is carried out by specialists, the price of arriving at an approximate price is simplified, as it is possible to approximate the cost of such trades as ferro-concrete for floors, beams or constructional steelwork, filler and beams, and such special work, so that the unit of price per foot cube for the general class work can be obtained and the correct price applied for the specialists' trade enumerated. The prices upon which the rates per foot are based are those current in *The Builder* at this date. Should any alterations in the conditions occur these can be adjusted to suit the actual conditions.

The usual objection to making approximate estimates for buildings and pricing them per cubic foot is that the voids are priced at the same rate as the actual solid work of a building may be sub-divided in many ways which would considerably increase the cost but would not increase the cubical contents. This objection can be overcome by pricing the building at per yard superficial area of the actual finished material. For instance, the front elevation could be measured as one item and priced at an inclusive price for facings, including either brickwork or stonework, windows, doors, painting and pointing, and internal plastering and distempering. The side and division walls could be dealt with in the same way, and the floors could be measured and taken as one item comprising floor joists and ceiling under. The roof could be dealt with in a similar way. A lump sum should be added for the staircase, and the sanitary arrangements, such as w.c.s and lavatories should be numbered, and an inclusive price placed against each item for the apparatus and all necessary pipes.

This method, by means of which the actual work involved in the building is dealt with, necessitates taking off very rough "quotations" and more nearly represents the actual work required than the measuring and pricing of the cubical contents of both material and void together.

The beginner may think it somewhat difficult to average the cost of the stonework to the front of the building, but if the whole is taken solid to a depth of from 9in. to 1ft. in accordance with the general proportions of architectural details, this should be sufficient for most buildings. The beginner should not make notes on these lines to get some idea of the effect of the difference that the stone is taken into the wall will have upon the cubical contents of stone used, therefore on the cost of the stonework on the front elevation.

When the superficial measurements of buildings have been taken the following give some idea of the method of arriving at the price of buildings by the superficial yard actual work:—

1 yd. super 1½ in. brickwork in cement mortar at £31 10s. rod, say.....	£1
1 yd. super extra only to red-brick facing and pointing	
1 yd. super internal plastering	
1 yd. super distempering	
Total per yard	£1

Extra only to windows could be added with as follows:—

The size of the window presumed to be 4ft. wide x 5ft. high.

	£	s.	d.
0ft. super of deal sashes and frames, ironmongery and glass	4	0	0
About 5 yards super painting both sides measured over all, 2s. 6d.	12	6	
ft. 6in. run of 11in. x 3in. stone sill	1	2	6
ft. 6in. run of window board	4	6	
0ft. run angle and return to plastering	5	0	
Arch and lintol, say	10	0	
	£6	14	6
Deduct:—			
0ft. super. 14in. brick wall £2	7	0	
0ft. super. brick facing and pointing	13	4	
0ft. super. internal plastering, say	5	3	
0ft. super. distempering	1	8	
	3	7	3
	£3	7	3

It will be observed that the small details of labour have not been taken, but rates affixed to the items should cover these. The size of window given is only an example, but in measuring one would take the average size of window required for the building. The figures used are adapted from those quoted in current issue of *The Builder*. By these figures it would seem that the approximate value per superficial yard of the wall would be 30s., and the extra cost of windows would be about £3 7s. 6d. each.

WORKMEN'S COMPENSATION

An important decision has been given by the Court of Appeal in two cases under the Workmen's Compensation Acts. *Briggs v. Thomas Dryden & Son*, and *Talbot v. Vickers, Limited* (*Weekly Notes*, June 20).

In the first of the above cases on April 4, 1918, the applicant, who was then nearly seventeen years of age, in the course of his employment met with an accident and lost the greater part of a forefinger. He received compensation at 10s. a week until September 13, 1918, when he resumed work, but a declaration of liability was filed on November 6. The applicant attained the age of 21 on December 7, 1923. On September 29, 1924, he underwent an operation to remove the stump of his finger and was totally incapacitated until January 3, 1925. During this period compensation was again paid him at 17s. 6d., being 10s., plus the war bonus; but the applicant applied for a review and an increase of compensation to 35s. a week under the First Schedule, par. 6, of the Act of 1906. The employers in this case opposed the application on the ground that the above paragraph had been repealed by section 24 sub-section (6) of the Act of 1923, and no claim could be made by a minor or increased compensation on a review after he has attained 21 years. As regards this point the second case raised a similar question.

Paragraph 16 of the Act of 1906 provides: "Any weekly payment may be reviewed at the request either of the employer or of the workman. . . . Provided that where the workman was at the date of the accident under 21 years of age, and the review takes place more than 12 months after the accident, the amount of the weekly payment may be increased to any amount not exceeding 50 per cent. of the weekly sum which the workman would probably have been earning at the date of the review if he had remained uninjured, but not in any case exceeding £1." Section 24 sub-section (6) of the Act of 1923 is as follows: "For the proviso to paragraph 16 of the principal Act the following proviso shall be substituted: 'Provided that where the workman was at the date of the accident under 21 years

of age and the review takes place more than six months after the accident and before the workman attains the age of 21 years, the amount of the weekly payment may be increased to such an amount as would have been awarded if the workman had at the time of the accident been earning the weekly sum which he probably would have been earning at the date of the review if he had remained uninjured.'"

The Court of Appeal, affirming the county court judge, held that the effect of the declaration of liability in each case was that the workman had an accrued right to have his compensation on review fixed according to par 16 of the Act of 1906. for in each case the workman had attained 21 before the Act of 1923 came into force, and thus under the proviso in section 24 sub-section (6) they would have lost the benefit of that provision; but this was obviated by section 38 of the Interpretation Act, 1889, which in sub-section (2) provides: "Where this Act or any Act passed after the commencement of this Act repeals any other enactment, then, unless the contrary intention appears, the repeal shall not (c) affect any right, privilege, obligation, or liability acquired, accrued, or incurred under any enactment so repealed." Section 24 of the Act of 1923 contained nothing to show "a contrary intention," and thus the Act of 1906 still applied in these cases.

It may here be noted that under section 30 of the Act of 1923, sections 2 to 10, which include the new scales of compensation, are not to apply to any case where the accident happened before the commencement of that Act which by section 31 is fixed as January 1, 1924, but by section 1, which repeals the War Addition Acts it is expressly provided that in respect of total incapacity arising from an accident which occurred before December 31, 1923, the additions provided by those Acts shall continue to apply. There is a curious lacuna here of one day, for if the accident should have happened on December 31, 1923, the scales of compensation provided by sections 2 to 10 of the new Act would not apply, and neither would the War Additions Acts, as their operation is expressly excluded where the accident happened before December 31, 1923. The position of minors still does not appear clear under the Workmen's Compensation Acts, 1906 and 1923. In the case under consideration the Court held the Act of 1923 to have no application because the workman had attained 21 years before the Act came into force, and the claim was relegated to the Act of 1906, and paragraph 16 of the First Schedule to that Act does not appear to raise difficulties as to the scale of compensation, for it does not refer, as does section 24 sub-section (6) to "such an amount as would have been awarded" (words which imply an application of the scales for compensation), but merely provides "that the weekly payments may be increased to any amount, not exceeding 50 per cent. of the weekly sum which the workman would have been earning." But assuming the accident to have occurred before the new Act came into force, but the review to take place after the Act came into force, and before the workman attained the age of 21, how is the compensation to be calculated then? Section 24, as we have said, implies a computation according to scale, but the scales provided by the new Act in sections 2 to 10 are not to apply where the accident happened before the Act came into force, therefore apparently the compensation in such cases must be computed under the scales provided by the Act of 1906, plus the War Additions when the accident results in total incapacity, with the one exception that if the accident happened on December 31, 1923, no War Addition can be taken into consideration. The courts have observed that there seems a fatality in legislating on Workmen's Compensation, and that obscurity is always the result, and the provisions above referred to seem to justify these observations.

THE RATING AND VALUATION BILL

THE proceedings in Committee on the Rating and Valuation Bill appear to prove eventful to the end. When the Committee resumed its sitting on July 28, the Chairman ruled out of order two pages of amendments relating to clause 72, subclause (3), which appears not to have been in the draft Bill, and which relates to hereditaments occupied by the Crown; but at the sitting on July 30 he announced that since delivering that ruling he had found a precedent in the Valuation of Property Bill, 1874, for an amendment of the nature of one of those put down, and Mr. Barker then moved a new clause that all property in the occupation of the Crown should be chargeable in respect of rates, and the gross and rateable values of such property should be determined in accordance with clause 21 of the Bill. This clause was opposed on behalf of the Government, but was carried by 17 votes to 10. A further clause that all property in the occupation of the Crown used for public purposes only should be chargeable in respect of rates was also carried.

The proceedings are too shortly reported to enable the exact effect of the two amendments to be considered, and the Committee adjourned to the following week. In the Bill as it stood, where any hereditament was occupied by the Crown for public purposes, no gross value was to be determined or entered in the valuation list, and if any contribution in aid of rates was made by the Crown the value entered in the valuation list was to be the value upon which the contribution was computed; in other words, such contributions were to be made *ex gratia*.

Sir Kingsley Wood, on behalf of the Government, at the sitting on July 28, had expressed sympathy with the views put forward that certain classes of Crown property should be rated, as, for instance, where the public services imposed burdens on the local authorities as in the case of aerodromes, where the roads giving access to the same were torn up, but he had expressed the opinion that a general rating of all Crown property of all descriptions was outside consideration.

The other matters of interest dealt with during the week were the new clauses dealing with questions which had been deferred. A new clause to take the place of clause 11, which deals with the rating of houses let out in parts, was agreed to without discussion. This clause enables the rating authority or the assessment committee, if they think fit, to treat a building let out in parts as though it were a single hereditament in the occupation of the person who receives the rents, and it appears to do away with a difficulty which was inherent in the original clause which depended upon the degree of the structural alterations carried out, raising the question whether they were such as to convert the parts into separately rateable hereditaments, a question which, under the Rent Acts, has proved conducive to much litigation.

As regards clause 10, which relates to the collection of rates by owners, a new clause was also carried. The principal amendment introduced by this clause appears to be the introduction of a specified limit placed upon the house brought within the clause as it is to apply to hereditaments as before, where the rent is collected at intervals shorter than quarterly, but now shall in no case apply to houses where the rateable value exceeds £13. The allowances made to owners under this clause also appear to be varied, but at present it is difficult to state how the matter exactly stands. We rather gather that the "commission" for collecting the rates, is as in the Bill, 5 per cent., and that if the owner pays the rates before the date specified in the agreement or resolution and, whether the house is occupied or not, 15 per cent.; in similar circumstances, if the house is occupied, 7½ per cent. What is not clear

from the report is whether the 5 per cent. commission is payable in any event, or whether that too is dependent on the payment being made before it is due. Sir Kingsley Wood intimated it was desired to include London in these provisions. A new clause was also proposed by Sir Kingsley Wood and inserted in the Bill constituting a central Valuation Committee, consisting of members of the County Valuation Committees and of Assessment Committees, and of such other persons as may be provided by the scheme which, to secure uniformity, should take into consideration the operation of the Act and remove inequalities in the system of rating by such consultation and conference with such bodies or persons as they should deem desirable.

THE WEEK IN PARLIAMENT

WESTMINSTER, Wednesday.

Scottish Housing.

THE subject of Scottish housing was raised during the debate on the Scottish estimates. Sir John Gilmour the Secretary for Scotland, said that the shortage in Scotland was now 100,000 houses, but the greatest difficulty was the shortage of building labour. There was room in Scotland for all the brick and stone houses that the building operatives were capable of erecting and in addition for any other method of construction could produce, whether they were Weir houses, Atholl steel houses, or steel-roofed houses. The problem could be solved only by co-operation on the part of operatives, masters, the local authorities, and the Government.

New Bill.

Mr. G. Hall, a labour member, has presented a Bill to make further provision for the housing of miners and mine workers.

Unemployed Workers.

Mr. Betterton informed Mr. Day that on June 22, 50,910 building trade workers were registered at Employment Exchanges as unemployed of whom 12,000 were skilled workers, 20,000 skilled workers' labourers and 18,000 others.

Lead Poisoning.

Mr. H. Williams asked the Home Secretary which countries had put into full operation the Convention of 1921 with regard to the use of lead in the painting of buildings, and which countries had legislated only to the extent of the Lead Paint (Protection against Poisoning) Bill, 1925.

Sir W. Joynson Hicks said that four countries, namely, Austria, Czechoslovakia, Poland and Sweden, had formally ratified the Convention and taken legislative or other steps to give effect to it. He had no information of countries with Legislation on the lines of the Lead Paint Bill.

Parliament rose for the summer recess on Friday, August 7, and will reassemble on Monday, November 16.

THE SURVEYORS' INSTITUTION

AN application from the South African Institute of Quantity Surveyors for affiliation with the Surveyors' Institution has been approved by the Council of the latter body. The South African Institute is a professional society of high standing in the colony, and was incorporated in 1908. It includes upon its governing body six members of the Surveyors' Institution. Under the conditions of affiliation, members of the Colonial society, who are not members of the Institution, will not be given any personal connection with the latter. The Council of the South African Institute will, however, supervise the Institution examinations in the Colony, and in other ways co-operate with the Council of the Institution in furthering the interests of the profession.

APPORTIONMENT UNDER THE RENT ACTS

No branch of the law is more difficult to follow than the numerous decisions dealing with the apportionment of rent under the Rent Acts. The decisions are indeed becoming irreconcilable the one with the other, and the greatest confusion prevails. In a recent note on the case *Barratt & Evans v. Hardy Brothers (Alnwick), Ltd.* (*The Builder*, May 22) we quoted Lord Justice Bankes as having said that the Courts, in trying to stop up holes in the Rent Act, 1920, had really created greater difficulties, and a chasm had been opened up in which even a house in Pall Mall can become engulfed within the statute.

In our issue June 25 we noted the case *Abrahart v. Webster*, as decided by a Divisional Court; this decision has been appealed, and is now reported (1925, 1 K.B. 563). *Abrahart* was the tenant of a basement in a house in Hove and he was applying for an apportionment of the rent. On August 3, 1914, the house had been let as a whole at a rent of £60 per annum, and the house consisted of a basement, a ground floor and two other floors. It continued to be let as a whole to various tenants, but at some time subsequent to 1918 one of these tenants had sublet certain floors, and in 1920 this basement (with the exception of a room called the "slip room") was sublet to *Abrahart*, and he also was tenant of two rooms on the top floor. On January 4, 1921, the respondent in this case had purchased the house, and in February *Abrahart* had surrendered his lease of the two top rooms but retained possession of the basement as before on a new tenancy at 11s. 9d. a week. The rest of the house was let to another tenant until September, 1923, when the respondent made certain alterations in the house with a view of converting the parts above the basement into two separate tenements, but no alteration was made in the basement, and the basement derived no benefit at all from the alterations.

On the application for an apportionment of the rent of the basement the county court had fixed the standard rent of the house at £60, and apportioned the standard rent of the basement at a fifth of that sum. A Divisional Court had set this aside, holding that section 12, subsection (9), must be read as referring to the house as a whole, and that there had been such a reconstruction of the house, reading the subsection in that sense as to take it out of the Act. The Court of Appeal have now set this judgment aside, holding that the subsection only applies to the part actually converted, and the basement, untouched by the alterations, remained a part of the premises let as a whole in 1914, and the right to apportionment survived.

Stockham v. Easton (1924, 1 K.B. 52; *The Builder*, May 18, 1924) is the nearest to the above case, but in that case the structural alterations were shown indirectly to have benefited the floor there in question, and the whole house was held to have lost its identity. In *Abrahart's* case Lord Justice Atkin distinguished *Stockham's* case on the ground that it was a case where the alterations had caused the house to lose its identity, but the distinction between the two cases is so fine that we cannot but think had the present decision of the Court of Appeal preceded *Stockham's* case a Divisional Court would have felt bound to follow it, and would not have distinguished it. The whole difficulty appears to have originated as was pointed out by Lord Justice Bankes in *Barrett & Evans v. Hardy Brothers*, with the decision of the Court of Appeal in *Sinclair v. Powell* (1922, 1 K.B. 393; *The Builder*, January 27, 1922). In that case the whole house was not within the Rent Restriction Act then in force, and a Divisional Court had held that, as the building when it was let off in flats was not restricted, the owner was entitled to do with it as he pleased, and that a tenant of one of the flats was not entitled to an apportionment. The Court of Appeal, Lord Justice Scrutton dissenting, upheld this judgment, but on other

grounds, the majority holding that the question depended upon whether there had been such a reconstruction of the building as to cause it to lose its identity. Lord Justice Bankes sitting with Lord Justice Scrutton as a Divisional Court, in *Barrett's* case admitted this had been an unfortunate decision leading to the confusion which has resulted, as it has led to sub-section (3) of section 12, the apportionment sub-section, being applied to parts of houses let as separate dwellings, although the house as a whole is not within the Acts.

But we may point out that another difficulty arises in connection with this interpretation. In *Smith v. Prime* (1923, *Weekly Notes*, 131; *The Builder*, May 25, 1923) a building had been so converted by conversion into flats that it was admitted it had lost its identity within *Sinclair v. Powell*, but it was argued that the flats were not "separate and self-contained flats or tenements" within section 12, subsection (9). It was held that they answered this description, but this case was followed very quickly by another case, *Darrell v. Whitaker* (1923, *Weekly Notes* 165; *The Builder*, May 18, 1923) of the same kind, and in that case it was again held that the house had lost its identity, and also that the flats were separate and self-contained, but the Divisional Court which decided the case for the first time pointed out that if the rule as to loss of identity was applied to the whole building then it appeared impossible to give effect at all to subsection (9) as that subsection appeared redundant.

In our note on that case we ventured to point out, what has since been confirmed by the above dicta of Lord Justice Bankes in *Barrett's* case, that there was very great doubt whether the doctrine of identity was in the contemplation of the Legislature. We said: "An examination of the Act can only lead to a doubt whether the doctrine as to buildings losing their identity was in the contemplation of the Legislature at all," and further on we observed: "There is reasonable doubt as to whether the decisions as to flats based on the question of identity with the original building stand on a firm basis," and indicated that it was impossible to treat any section of an Act of Parliament as redundant if a meaning could be given to it, and that the apportionment sub-section could be applied to parts of houses, as has now been held in *Abrahart's* case, when the house itself was within the Acts and unaltered as to its identity. It is almost impossible to say at present what the actual position is. *Barrett's* case is not yet reported in the Law Reports but it appears that the Court held apportionment to apply because there had been no reconstruction of the house. The application for apportionment in itself marked a new departure in that it was based not on the rent but on the rateable value of the premises, but this building had always been let in floors since before August 3, 1914, although the basement and first floor had been assessed together and the second, third, fourth, and fifth floors were also assessed together.

In *Lelyveld v. Peppercorn* (1924, 2 K.B. 638; *The Builder*, June 27, 1924) where some floors in a house had been let before August 3, 1914, it was held the house as a whole never had a standard rent, and the standard rent of a flat subsequently let was held to be the rent at which it was first let, but the Court in *Barrett's* case intimated some doubt whether this decision was in accord with the earlier decisions. The real difficulty in the decisions appears to be this: that the test of the identity of the house has been carried so far that it has come to be applied to flats in an unaltered house, although the house as a whole was never within the limits of the Rent Acts. That is the effect of the decision in *Barrett's* case (following *Sinclair v. Powell* and numerous other cases), and has, as the Court pointed out in that case, led to unforeseen results, and as the Court observed

Darrell v. Whitaker rendered sub-section (9) most redundant. On the other hand Abart's case gives the Act a reasonable interpretation, and also gives effect to sub-section (9), where the whole house was within the limits of the Rent Acts, and the unaltered basement was separately treated as part of a dwelling house let as a separate dwelling under sub-section (8) of section 12, and it was held that an apportionment of the rent of that portion could be made, whilst the altered portion of the premises if containing two or more separate and self-contained flats came within the exception provided by sub-section (9). It appears that the doctrine of identity is the cause of all the trouble, and unless a case comes to be stated to the House of Lords, and that tribunal should over-rule the cases that imported it, there is urgent need for action by legislation.

THE KANGO HAMMER

An interesting demonstration took place recently at the offices of the Kango Co., Ltd., 78, Petty France, Westminster, of their light-weight (9½ lb.) Kango hammer. This hammer works on an entirely new mechanical principle which hitherto has never been adopted for practical commercial purposes. In this centrifugal force is used for the conversion of rotary into reciprocating motion with such simplicity that it is essential to see it working in practice to properly appreciate or realise its great scope. The principle has been first applied in this instance to a very long-felt want, namely, that of a light and portable hand-power hammer. The motor is universally wound for either 110, 220 or 230 voltages, and the motor speed is in the vicinity of 9,000 to 10,000 r.p.m. As a practical indication of the low current consumption required, it will be sufficient to state that that of the 220 volt hammer is approximately 4 amps. The most interesting point of this new principle is the part played by the speed of rotation of the weights and the effect on the oscillating motion at the hammer head. Variation of speed produces a harmonical variation of the number of blows, and as the speed is increased, blows of proportionately increased intensity to those obtained at one blow per revolution can be obtained at every second or third revolution. This point is being put into practice for larger hammers which will be produced in due course.

So far it has only been possible to use pneumatic tools for this type of work, because there has been no other means sufficiently developed for practical commercial use. The low efficiency of the pneumatic system, however, has always proved a serious disadvantage in its use, and this, together with the cost of compressor plant installations as well as their upkeep, has limited the use of percussion tools to cases where only their extensive use has counterbalanced the deficiencies of the system sufficiently to render it of practical use. By the production of the Kango hammer both the efficiency and the portability of percussion tools has been increased very largely, since at the present moment there are but few potential users without electric light, from which source the hammer derives its power. The Kango hammer requires only a fractional amount of power as compared to the pneumatic hammer.

At the demonstration the hammer was shown (1) cutting wood—in a far shorter space of time than could be accomplished by a plane saw, and with a very high resulting finish. (2) Cutting ½-in. steel with the utmost ease. (3) Drilling brick. This last operation should be of particular interest to builders; a brick 1-in. thick can be drilled in just over 30 secs. (4) Cutting out brick. (5) Stone dressing. (6) Drilling marble blocks. The Kango hammer can undoubtedly be made use of, economically (running costs work out at about 4d. per hour) and efficiently, in a large number of ways connected with modern methods of house-building. If required, the company are prepared to make special tools for any specific purpose.

A SCHEME FOR INCREASING THE SUPPLY OF WORKING-CLASS HOUSES

[The following essay, by Mr. John E. Yerrbury, was submitted in the *Daily Chronicle* Housing Competition, and received third prize.]

The two main essentials are maximum output and cheap capital. Maximum output can only be secured from contented workers; contented workers by security, and security by a guaranteed minimum wage.

The revival of the Building Trade Parliament would be the best means to attain our end; failing this, a separate branch of the building trade should be created for housing, by the provision of cheap capital to be advanced to local authorities and public utility societies willing to provide houses to let at rentals within the means of the poorest-paid worker.

Successive Governments have approached the difficulty on the assumption that subsidies are absolutely necessary, ignoring the fact that, by a system of deferred payment, cheap capital could be provided which would make commercial rents possible.

The scheme here proposed for supply of cheap capital is as follows:—The Government, by creation of 4 per cent. Housing Bonds, repayable capital and interest in 40 years, would secure a fund from which to make loans to local authorities and public utility societies for the purpose of building houses to let at rentals under 10s. per week; the loans would be at 2½ per cent., repayable in 60 years. The cost of bonds would be £5 1s. per cent.; the return from loans £3 7s. 4d. per cent.; showing a loss to the State of £1 13s. 8d. per cent. for 40 years, which would be repaid by the continued receipts from loans of £3 7s. 4d. per cent. for a further 20 years after State payments had ceased; a saving to the country of £1,376,000,000 promised by the Wheatley Act to rent payers.

The factors in rent are:—

1. INTEREST ON CAPITAL EXPENDITURE
 - a. Site.
 - b. Development.
 - c. Building.
2. WORKING EXPENSES
 - a. Maintenance.
 - b. Management.
 - c. Rates, Taxes and Insurance.
3. RESERVE OR SINKING FUND.

The Local Authority, being saved the subsidy under present Acts, it is proposed to fix upon them the charges for roads and sewers.

A further suggestion is to transfer from rates to taxes all those charges which are not purely local, by an increase of grants-in-aid to cover such charges.

Strikes against payment of rent would be made illegal by the Act of Parliament dealing with this scheme. Local by-laws should be revised to meet the necessities of the position. If found necessary to prevent profiteering public utility societies in combination would manufacture or import all material for their own use, and also supply local authorities.

Estimated Cost of Cottage.	
Land, under Acquisition Act, £180 per acre, 15 Houses	£12
Roads and sewers—expense borne by Local Authority, £375 per acre	25
Labour and Material	325
Commissions, costs and fees	8
Profit	30
	£400

Comparative Rentals of Houses to Cost £400.			
	Government Scheme.		Suggested Scheme.
	£	s. d.	£ s. d.
Interest on cost at 6 per cent. ..	24	0	0
Interest and repayment of loan in 60 years	£400		
Less Roads, &c.	25		
	£375		
Rates 25 per cent. gross rent. ..	11	0	0
15	—		
Maintenance "15" per cent. and Management 5 per cent. gross rent	8	16	0
Sinking fund ½ per cent. on capital expenditure	2	0	0
Commercial rental	45	16	0
Subsidy under Wheatley Act ..	13	10	0
Rental to be paid by tenant ..	32	6	0
After deduction of Subsidy, weekly rental	12	5	10

It is thus seen that, in addition to saving the subsidy (under the Wheatley Act £1,376,000,000), a deferred payment scheme, with other reforms advocated, would reduce rents by 2s. 6d. per week. If anticipations are realised by the creation of contented workers and satisfied tenants, further reductions would be made in the cost of building and in maintenance charges, still further reducing rents: while some slight reduction may be brought about by new methods of construction, but this will not be very great. With the all-in cost reduced to £300, a cottage could be provided under this scheme at 7s. 6d. per week, inclusive of rates, meeting the requirements of tenants in receipt of guaranteed wages of 30s. per week.

Several points of objection may be raised to the scheme outlined above:—

1. That bonds could not be raised at 4 p.c.
2. The Treasury would not lend at lower rate than it can borrow, or over a longer term of repayment.
3. Transfer of rates to taxes is hidden subsidy.
4. No account is taken of compound interest on losses made.

In reply, it is held that:—

1. 4 per cent. is not a fixed rate, but merely a figure to illustrate the scheme, the essential of which is that a deferred payment system is necessary to produce cheap capital and save subsidies.
2. If by a somewhat unorthodox method the Treasury can save the country from taxation (which under the Wheatley scheme might reach £1,376,000,000), it ought to accept proposals and make necessary safeguards.
3. The transfer of national charges from rates to taxes is a reform long overdue; increased grants-in-aid is the only method which would prevent delay, and the Exchequer might recoup the loss by a tax on unearned increments over a certain amount since purchase by present owner.
4. Interest is taken into account in repayment of bonds and in repayment of loans; there would not be any loss on the completed transaction. Interest on loss is not taken into account in any of the schemes proposed by successive Governments.

The capitalists of the country under the Wheatley Act would have to find £1,376,000,000 for subsidies, after providing the capital for building (over 1,000 millions). The scheme set out here would give them 4 per cent. on the money invested in bonds and save them the amount of the subsidy, while their investments would be productive of buildings.

The Ministry of Health would only require a comparatively small staff to assure (a) good building, (b) proper maintenance.

Builders' Estates.

Mr. Robert Owen Jones, of Dinarth Park, Llandudno-road, Colwyn Bay, Denbigh, builder and contractor (net personality nil), £9,460.

Mr. Robert Edward Jones, J.P., of Plas Llanfaelag, Anglesey, retired builder, formerly in business in Liverpool, an Alderman of the Anglesey County Council and High Sheriff in 1908, who died on March 5 last, aged 75 years, left estate of the gross value of £142,970, with net personality £46,744 9s. 4d.

The Heating of Rooms.

A paper by Dr. Margaret Fishenden, D.Sc., F.Inst.P. (Technical Paper No. 12 of the Fuel Research Board of the Department of Scientific and Industrial Research, published by H.M. Stationery Office, 1s. net), describes the results of experimental work undertaken to determine the relative costs of different methods of heating rooms when conditions of bodily comfort, under varying circumstances, are taken as the basis of comparison.

NEW BUILDINGS IN LONDON.

Acton.—Plans are under the consideration of the Governors of the Acton Hospital, Gunnersbury-lane, W.3, for the erection of additional buildings, including a nurses' home. The architects are Messrs. E. C. P. & H. Monson, F.R.I.B.A., Finsbury-pavement House, E.C.2.

Artillery-row.—Work has now commenced upon the rebuilding and extension of the showroom and staff quarters fronting on to Artillery-row and Spenser-place, S.W.1, of the Army & Navy Co-operative Stores, Ltd. The builders are Messrs. Dove Bros., Ltd., Cloudestley-place, Islington, N. The architects are Sir Aston Webb & Sons, Queen Anne's-gate, S.W.1. Further important improvements particularly affecting the Victoria-street frontage, will be put in hand later.

Barking.—Messrs. Charrington's Brewery, Mile End-road, E.1, intend to rebuild the "Crooked Bilet," at Creeksmouth. The contract has been placed with Messrs. George Parker & Sons, Ltd., 134, Sumner-road, Peckham, S.E., and will be supervised by Mr. S. A. S. Yeo, F.R.I.B.A., Bank Chambers, 2, St. John-street, E.C.2, the architect.

Becontree.—Mr. E. Meredith, A.R.I.B.A., 7, Goodmayes-road, Ilford, Essex, has prepared plans for the building of three lock-up shops and nine garages on a site in Burnside-road.

Bedford.—The War Memorial to Old Bedfordians near the West Gate will take the form of a hall, to be used as a library and reunion hall for Old Bedfordians. The architects are Messrs. O. P. Milne & Phipps.

Bishopsgate.—Foundations are now being constructed for the large office building in Bishopsgate, E.C.3, for the Hudson Bay Co. The contractors are Messrs. Dove Bros., Ltd., Cloudestley-place, N.1. The plans, which provide for a building surmounted by a tower 150 ft. high, have been prepared by Messrs. Mewès & Davis, 22, Conduit-street, W.1. The consulting engineer is Dr. Oscar Faber, M.I.C.E., the quantity surveyor being Mr. F. Henniker.

Bishopsgate.—Extensive internal alterations are to be made to the premises of the Midland Bank, Ltd., in Bishopsgate, E.C. The contractors are Messrs. Dove Bros., Ltd., Cloudestley-place, Islington, N. The architects are Messrs. Whinney, Son & Austen Hall, 8, Old Jewry, E.C.2.

Bishopsgate.—Foundations for the second portion of the large offices to be built in Bishopsgate, E.C., for the Westminster Bank, Ltd., are now in course of construction, about 25 ft. below pavement level. The contractors are Messrs. Holloway Bros. (London), Ltd., Bridge Wharf, Grosvenor-road, S.W.1. The architects are Messrs. Mewès & Davis, 22, Conduit-street, W.1.

Borough.—The Governors of the Borough Polytechnic Institute in Borough-road, S.E.1, propose to spend £79,804, exclusive of the purchase of the site, on the extension of their buildings. Mr. W. Courtenay Le Maitre, F.R.I.B.A., 133, Moorgate, E.C.2, is the architect.

Bromley.—A number of houses are to be erected in the district, and a contract has been placed with Messrs. C. T. Ward & Co., 2, Mortimer-place, N.W.6.

Buckingham Palace-road.—The L.C.C. have approved provisionally plans for the new "King's Arms" public house, No. 77, Buckingham Palace-road, S.W.1. Messrs. Petch & Fernand, 12, Buckingham Palace-road, S.W.1, are the architects acting on behalf of the owners, Messrs. Watney, Combe, Reid & Co., Ltd.

Catford.—A new road is to be constructed from Bromley-road, at Southend Village, S.E., to provide access to the site of the proposed new church of St. John's, for which Sir Charles Nicholson, Bart., F.R.I.B.A., 2, New-square, Lincoln's Inn, W.C., is the architect.

Charing Cross-road.—Large factory premises in Charing Cross-road, W.C.2, are being converted into shops, offices and showrooms. The

contractors are Messrs. Foster & Dicksee, Ltd., Manresa-road, S.W.3. The architects are Messrs. F. Taperell & Haase, 3, Gower-street, W.C.1.

Downs-lane.—An addition is to be made to the warehouse premises of Messrs. G. & J. Lines, Ltd., Thistle Works, Downs-lane, N.17, to plans prepared by Mr. Clifford S. Tee, F.R.I.B.A., 50, Moorgate, E.C. The contractors are Messrs. Henry Knight & Son, 16, Bruce-grove-road, N.17.

Edmonton.—Messrs. E. Rogers & Son, 3, Church-road, N.1, builders, are to erect a row of shops with flats above in Fore-street, Edmonton, N.1. Mr. W. A. Lewis, 11, Finsbury-square, E.C.2, is the architect.

Finchley.—A new depot is to be erected in Squires-lane, Finchley, N., at a cost of about £12,000. The contract has been placed with Mr. R. J. Rowley, Belmont-road, N.15. Mr. P. T. Harrison, 9, The Hawthorns, Regent's Park-road, N.3, architect.

Finchley.—A new hall and additions to existing buildings are to be erected at the Woodhouse Secondary School, Finchley, N. Mr. H. G. Crothall, F.R.I.B.A., architect, Middlesex Guildhall, Westminster, S.W.1. The contract has been placed with Messrs. Turner & Payne, High-road, Finchley, N.12.

Greenwich.—A Bill is before Parliament, promoted by the Dreadnought Seamen's Hospital, of Greenwich, S.E.10, to empower the Committee to proceed with the erection of new buildings, including a nurses' home, pathological department, &c., on an adjoining disused burial ground. The architect is Sir Edwin Cooper, F.R.I.B.A., 4, Verulam Buildings, W.C.

Hackney.—An extension is to be made to the manufacturing premises of Messrs. Benmax Bros., at 22, Mare-street, E.8. Mr. S. Ansell, 89, Leconfield-road, N.5, architect.

Hayes.—Funds are being collected for the building of a new Roman Catholic church. Plans have been prepared by Senor Evilldrino, Eiraguirre, of Portugal.

Hendon.—3,000 houses will shortly be erected on the recently acquired L.C.C. Housing Estate at a cost of £1,800,000. Mr. G. Topham Forrest, F.R.I.B.A., County Hall, S.E., architect.

Huntley Street.—The contract for the erection of the new Royal Ear Hospital on the site at the junction of Huntley-street and Pancras-street, W.C.1, at a cost of about £50,000-£60,000, has been placed with Messrs. Higgs & Hill, Ltd., Crown Works, South Lambeth-road, S.W.3. Messrs. Edmund Wimperis and Simpson, 61, South Molton-street, W.1, architects.

Ilford.—On an area of land facing Hampton, about 50 houses are to be erected, by Mr. J. W. Davies, Henley-road, Ilford.

Kensington.—A scheme for the erection of 38 flats on a site in Virginia-place, W., at a cost of about £17,000, is contemplated by the B.C. Mr. L. R. Guthrie, 37, Bruton-street, W.1, architect.

Kensington.—The conversion of the large residence in Princes-gate, W., into quarters for the American Ambassador, is now in hand. The contractors are Messrs. Holland & Hannen and Cubitts, Ltd., 258, Gray's Inn-road, W.C. The architects are Messrs. Carrere and Hastings, of Vanderbilt-avenue, New York City.

King William-street.—New headquarters in King William-street, Nicholas-lane, and Nicholas-passage, E.C., are to be erected by the London Life and Clergy Mutual, 81, King William-street, E.C.4. Mr. W. Curtis Green, A.R.A., 5, Pickering-place, S.W.1, architect.

King's Cross.—A warehouse is to be erected at the engineering works in Field-street, N.W.1, owned by Messrs Hewitt Bros. Mr. Max C. Cooke, F.R.I.B.A., 20, Bedford-row, W.C.1, and 25, Castlebar-road, W.5, architect.

Kingston.—The Ministry of Health have approved the scheme of the Kingston Board of Guardians for the erection of a new nurses' home, &c., at a cost of about £80,000. The architect is Mr. F. Danby Smith, Parliament Mansions, Victoria-street, S.W.1.

Lambeth.—Further alterations are to be carried out to the works premises in Borough-road,

S.E.1, of Messrs. R. Hoe & Co., Ltd., engine Messrs. Robinson and Rood, F.S.I., Bedford-row, W.C.1, architects.

Leicester-square.—The Cavour Restaurant, Leicester-square, W.1, is being rebuilt. The contractors are Messrs. Bovis, Ltd., 43, U. Berkeley-street, W.1. Mr. Claude W. Fe, F.R.I.B.A., 11, Waterloo-place, S.W.1, tect.

Marlyebone.—It is proposed to add a to the new blocks of tenements in Fische street, W., at a cost of £7,800. Messrs. A. & Newman, 14, Gray's Inn-square, archit

New Oxford-street.—An addition of four is to be made to the branch in New Ox street, W.1, of the Westminster Bank. The contract has been placed with Messrs. and R. Roberts, 144, Lower Clapton-road, Messrs. Campbell Jones, Son & Smither Dowgate-hill, Cannon-street, E.C.4, archit

Northfleet.—In connection with the cement works at Bevan for the Associ Portland Cement Mfrs., Ltd., Tothill-st S.W.1, a contract for eight silos of 1,000 each has been placed with Messrs. Th & Edge, Cross-street, Woolwich, S.E. I by the company's engineers.

Regent-street.—Application for the erec of a block of shops and offices on the sit Nos. 99-101, Regent-street, W.1, higher than prescribed under the London Buildings has been made to the L.C.C. by Mr. E. A. St F.S.I., 20, Berkeley-street, W.1.

Richmond.—Premises in Hill Rise, Richm have been acquired by the National Provid Bank, Ltd., Bishopsgate, E.C.3, for conver into branch offices. Mr. F. C. R. Pal F.R.I.B.A., architect to the bank.

Rosebery-avenue.—Messrs. Frank Matc & Co., 9, Warwick-court, Holborn, W.C.1, been appointed architects for the reconstru of Sadler's Wells Theatre, in Rosebery-ave E.C. The cost is estimated at £30,000.

St. Mary Axe.—A large office and wareh building is to be erected on a site in St. Axe, E.C., for Messrs. Bunge and Co., grain merchants, 33, Bury-street, E.C.3. Delissa Joseph, F.R.I.B.A., 2, Basing avenue, E.C.2, architect.

Stepney.—The London Jewish Hospita Stepney Green, E.1, propose to build additi stories to their premises at a cost of a £25,000. Messrs Joseph, 2, Paul's Bakeho court, E.C.4, architects.

Teddington.—Teddington Memorial Cot Hospital Committee propose to build a hos at a cost of £13,000. Mr. John Armbr architect, 42, Clarence-road, Teddington.

Tokenhouse-yard.—The steelwork is abou to be erected for the new building in Tokenh yard, E.C.2, for the Bank of England. The contractors are Messrs Matthew T. Shaw & Ltd., West Ferry-road, Millwall, E.14. The builders are Messrs. F. G. Minter, Ltd., 1 Works, Putney, S.W. The architect is M W. Troup, F.R.I.B.A., 14, Gray's Inn-sq W.C., and the quantity surveyor Mr. I Watkins, 13, Gray's Inn-square, W.C.

Twickenham.—The U.D.C. propose to con York House, a large residence, into muni offices, at a cost of about £40,000. Plans been prepared by Mr. Ralph Knott, F.R.I. Adelphi-terrace House, W.C.2. A tender been submitted by Messrs. F. & H. F. F. Ltd., Hinton-road, Herne Hill, S.E., at £3. Quantities by Mr. F. S. Henniker, 1-3, Ro street, W.C.2.

West Ham.—A new building is to be er in Woodgrange-road, E., for Messrs. Up Ltd., boot manufacturers, 8, Gt. Dover-s S.E.1. The contractors are Messrs. Ham & Miles, Ltd., Scrafton-road Works, I Essex. The steelwork will be by M. Archibald Dawney & Sons, Ltd., Steelw road, Battersea, S.W. Mr. S. C. Addison Grove-road, Eastbourne, architect.

Westminster.—At a cost of £58,000 a building for students and staff is to be ei at St. Thomas's Hospital, Albert Em ment, S.E.1. Plans by Mr. H. W. Ch F.S.I., 37, Norfolk-street, Strand, Messrs. Sabey & Son, 100, Great Ru street, W.C.1, builders.

Westminster.—Demolition of the old baths washhouses in Marshall-street, S.W.1. has been commenced, preparatory to the erection of much larger buildings. Plans by Mr. Veit, C.E., F.S.I., City Engineer, Westminster, who has appointed Mr. A. R. R. F.R.I.B.A., 42, Cecil Park, W.8, architectural assistant.

Westminster.—The adaptation and extension of Crosby Hall, on the Embankment, S.W., as a hostel for the British Federation of University Women, at a cost of about £50,000, is to be put in hand. Messrs. Wratten and Grey, 18, Queen Anne's-gate, S.W.1, architects.

Westminster.—The L.C.C. have approved plans prepared by Mr. Victor Wilkins, F.R.I.B.A., for the extension of the Corporation Buildings, Adelphi, W.C.2 for a further block of tenement dwellings on the eastern side of the ferry-road, S.W.1, for the Peabody Donation Fund, 15, Buckingham-street, Strand, W.C.2.

Westminster.—Messrs. L. H. & R. Roberts, Lower Clapton-road, N., have secured the contract for the erection of an additional building at St. Martin's School of Art, S.W.1. G. Topham Forrest, F.R.I.B.A., County of S.E.1, architect.

Whitcomb-street.—The second section of the premises for the Automobile Association is shortly to be put in hand. The general contractors are Messrs. Arthur Vigor, Ltd., Hantsbridge, S.W. The steelwork will be erected by Messrs. Smith-Walker, Ltd., 33, Mill-street, S.W.1. The architect is Mr. Henry Mather, 38, John-street, Bedford-row, W.1.

Willesden.—A new factory is to be built in Ware-road, N.W.10, for Mr. E. W. Hay, brush manufacturers. Mr. A. Arnell, Regent-lane, Golders Green, N.W., has prepared the plans.

Willesden.—A new works building is to be erected in Milton-avenue for Messrs. G. Blunt, bookbinders, etc., Kilburn-lane, W. The contract has been placed with Messrs. Greenwood & Sons, Ltd., Mordant, N.10. Mr. John Lawrence, F.S.I., Pattiad, West Hampstead, is the architect.

Willesden.—The Industrial Engineering Co., propose to extend their works at Oat-road, N.W.2. Plans have been prepared by Messrs. Trant, Brown & Brightiff, 332, Elm High-road, N.W.

Wimbledon.—Messrs. A. & H. Crowley, brewers, propose to carry out considerable alterations to the "White Hart" house at North-road, Wimbledon, S.W., by the company's architect.

Wood-street.—Foundations for the auto-telephone exchange in Wood-street, are now being put in by Messrs. Higgs & Co., Ltd., Crown Works, South Lambeth, S.W. The super-structure will form a separate contract. Plans by H.M. Office of Works, Storey's Gate, S.W.1.

THE INTERNATIONAL CONGRESS OF BUILDING AND PUBLIC WORKS

The Fourth Congress of the International Association of Building and Public Works was held recently in Paris, there was a large attendance of delegates from most countries in Europe, also from Asia, Africa, and the American Continent. Great Britain was represented by Sir Lionel Earle, Permanent Secretary H.M. Office of Works; with whom Mr. R. Pitcher, O.B.E.; Mr. F. W. Leggett, Minister of Labour; Mr. Roland B. (vice-president of the International); Mr. J. Forsdike, Mr. Wm. H. Nicholls, Sir Airey, Mr. Ernest J. Brown, Mr. A. N. and Mr. H. R. Middleton, representing the International Federation of Building Trades of Great Britain and Ireland; Mr. R. Swann, surveyor for the City of Liverpool; Mr. T. J. Byrne, chief architect to the Corporation of Public Works, Dublin; and many other representatives from India, Ceylon and Mauritius, were also present. With most cordial expressions of welcome, Mr. B. Chessum was elected President for the coming term normally beginning in October.

(For rates of wages in the Building Trade in Scotland, see Page 269.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

EUXIMOOR.—Isle of Ely E.C. have decided to proceed with a scheme for a new school for the C. of Christchurch and Euximoor.

* See also our List of Contracts, Competitions

EXMOUTH.—The U.D.C. have recently adopted a report from the Pavilion Committee recommending that the Council purchase the whole of the property of the Imperial Stables for the purpose of erecting an entertainment pavilion or hall, and that Mr. Palmer, the owner, be offered £2,800 for it, subject to the sanction of the Ministry of Health being obtained to the borrowing of the money.

FELLING.—The U.D.C. is raising loans for £34,371 for housing purposes.

GLOUCESTER.—The C.C. propose to build a further 50 houses by direct labour.

HAILSHAM.—At a meeting of the R.D.C. recently, it was reported that the Town Planning Regional Committee was of the opinion that the whole of the area of the Hailsham Rural district should be included in the scheme. It was decided to inform the Ministry of the proposal to invite tenders for the erection of 16 houses.

HAITHWISTLE.—The R.D.C. has decided to proceed with a sewerage scheme for the east end of the town, at an estimated cost of £7,000 to £8,000.

HAUNDERWELL.—The Dalton Main Colliery Co., Ltd., are to erect 262 modern type houses on the Bramley village site, for the housing of their own workpeople.

HEADLEY.—Hampshire E.C. are to enlarge the Headley Bordon elementary school at a cost of £3,500.

HEXHAM.—The B.G. are seeking permission from the M.H. to re-model the sanitary arrangements at the hospital, at a total estimated cost of £1,149.

HOYLAND.—The Surveyor has been instructed to prepare plans and estimates for a new Town Hall.

HULL.—The C.C. have been decided by a large majority to seek powers to build a new North Bridge, which is estimated to cost £275,000.

ISLEWORTH AND HESTON.—The U.D.C. have decided that application be made to the Ministry of Health for sanction (a) to the raising of a loan of £908 for the purpose of widening and improving Westbrook-road, Heston; (b) to the borrowing of the sum of £524 for the purpose of extending the foul sewer in North Hyde-road, Heston. Plans passed: Messrs. William Harbrow, Ltd., for 26 houses, Vicarage Farm-lane, Heston; Mr. L. Fowler, for 12 houses, New Heston-road.

KENSINGTON.—The London E.C. has acquired a site in the Golbourne ward for the erection of an elementary school. The B.C. propose to erect 38 flats at an estimated cost of £18,000.

KINGSTON.—Alterations are to be made at the offices of the Surrey C.C. at Kingston at a cost of about £500. An expenditure of £2,500 has been voted for the provision of temporary accommodation for staff.

LAMPETER.—Cardigan County Surveyor has been instructed to prepare a scheme for widening Lampeter Bridge. Cardigan E.C. are to erect a new wing at the Bryn-road central school, Lampeter, at a cost of £2,191.

LANKARSIDE.—The District Committee approved an application to the Scottish Board of Health with respect to 1,000 houses which they proposed to erect in the Lower Ward.

LEICESTER.—The E.C. have submitted to the Leicester C.C. their estimates for the extension to the Colleges of Art and Technology amounting to £47,000.

LISS.—The Council school at Liss is to be enlarged and improved by the Hampshire E.C. at a cost of £1,000.

LONDON.—Freemasons are proposing to build a central home as a Peace Memorial.

LONGFORD.—Warwick C.C. are negotiating for land required for the widening of the Longford river bridge.

MACCLESFIELD.—The Highway Committee have approved a plan of new mill, offices and warehouse, to be erected in Pickford-street, deposited by Messrs. G. H. Heath & Co., Ltd.

MARPLE.—Additional land is to be purchased by the Marple (Cheshire) U.D.C. at a cost of £1,050, for sewage disposal purposes.

MEPAL.—The Highways Committee of the Isle of Ely C.C. express readiness to assume responsibility for the future maintenance of a new bridge over the Hundredfoot River, at Mepal, provided the Ouse Drainage Board will contribute £3,000 towards the cost of the construction of such bridge.

MILFORD.—Eleven tenders have been received for the erection of the Milford Sanatorium, for the Surrey C.C., but as the lowest exceeded the estimate on which the capital grant of the M.H. has based, the Public Health Committee are trying to arrive at a satisfactory agreement with the Ministry as to modifications of the plans.

MONKS KIRBY.—The R.D.C. are to effect an improvement at dangerous corners on the main road at Street Ashton.

MONKTON.—Final plans are being prepared by the Durham County E.C. for an elementary school at Monkton.

NEWPORT.—The estimated cost of the reconstruction of Newport Bridge, is £170,000.

NORTH BERWICK.—The T.C. are proposing to build new public hall at a probable cost of £13,950.

NORTHWICH.—The U.D.C. have a proposal for the widening of the bridge over the Cheshire Lines railway at Northwich station. The Rural Hospital Committee have acquired land for the erection of a tuberculosis pavilion.

NOTTS.—In regard to the erection of bridges on the great North-road in lieu of existing level crossings, Notts County Council reports receipt of a communication from the L.N.E.R. offering a contribution of £10,000 towards the cost of the scheme. The M.T. has intimated a grant of 75 per cent. of the cost, estimated at £50,000, after deducting the railway company's contribution.

OLDHAM.—The Ashton District E.C. has approved of plans for the provision of alteration and extensions at the Minor-street Council school, Failsforth.

PONYTON.—The Parochial Church Council are acquiring a site at Ponyton (Cheshire) for the erection of a parish church hall.

QUEENSBERRY.—The U.D.C. has decided to erect 12 houses in Russell-avenue.

RICHMOND.—The Richmond County School for Boys to be enlarged by the adaptation of the premises

"Thornwood" for school purposes, plans prepared by the Surrey E.C. having been approved by the B.E. SALFORD.—The Corporation have decided to widen Eccles Old-road at a cost of £43,000. The sewer in Claremont-road is to be reconstructed at a cost of £7,300. A site in Pendleton is being acquired for the erection of a branch library.

SEAHAM HARBOUR.—Designs submitted by the Surveyor for 56 houses, to be erected as a first instalment of the new housing scheme, have been adopted by the U.D.C. and estimates are to be invited from builders for their erection.

SHEFFIELD.—The Corporation have voted £157,475 in connection with a housing scheme on the Wyburn estate, it being reported that the land will provide for 340 houses. Six acres have been acquired for the extension of Blackmore Woods. A hut is to be provided at Phillimore-road school at a cost of about £1,000 for a domestic economy centre.

SHIRLEY.—Warwick C.C. are to proceed with the scheme for widening the main road at Shirley.

SMETHWICK.—The T.C. passed plans for 12 houses in Bowden-road, for Mr. W. Lees.

STOCKBRIDGE.—The elementary school at Stockbridge is to be improved and enlarged by the Hampshire E.C., at a cost of £3,250.

SUTTON COLDFIELD.—Erection of 20 houses at Britwell-road, for Mr. H. S. Barber, have been approved by the T.C.

WISBECH.—Two new elementary schools, one for 300 boys and another for 300 girls, are to be erected by the Isle of Ely E.C. at Wisbech on a site in Queen's road.

WOOLWICH.—The M.B.C. propose to construct a means of communication for pedestrian traffic on the western side of the Well Hall railway bridge. The Borough Engineer, on the instruction of the Works Committee, has prepared and submitted drawings to the Southern Rly. Co.—The M.B.C. recommend (a) that application be made to the London County Council for their sanction to a loan of £62,317, for the erection of 101 houses on the Council's housing estate, Eltham; (b) that application be made to the Ministry of Health for their sanction to a loan of £1,900 for the erection of a Maternity and Child Welfare Centre at Plumstead High-street.—Plans passed: The M.B.C. has approved plans for building and draining a Parish Hall as addition to the existing hall, by J. J. Taylor, Westminster.

WOKING.—A drainage scheme for the Pyrford-road district is being considered, the cost being estimated at £2,500. A surface water drainage scheme is being considered for the Fletcher-road estate. Both for the U.D.C.

YEADON.—The M.H. has now definitely approved of the U.D.C.'s scheme for the erection of 72 houses on the Hawthorn-crescent site.

YORK.—The Government is to be asked to approve for grants the following relief schemes: Culvering Lang Hall Beck, estimated cost, £5,100; widening of Bootham-crescent, £2,500; improvement of Price's-lane, £300; concrete surfacing Alma-terrace, Carey-street, Francis-street, and Ambrose-street, at £4,554; and the construction of a 60 ft. wide road from Bishop-thorne-road to Fulford-road, including bridge over the River Ouse, at £79,500.

TRADE NEWS

Mr. Wilfred E. Ellis, builder, has removed from 176, Blackhorse-lane, E.17, to Watford-road, Watford, Herts., where he is erecting modern offices and workshops.

Messrs. William Shepherd & Sons, Ltd., who have established a bituminous asphalt department, have already secured important contracts with the Borough of Bromley, Kent, and the City of Coventry.

We are informed that as from August 1 Messrs. Allen-Liversidge, Ltd., Victoria Station House, Westminster, S.W.1, are taking over the sole selling agency for Great Britain and Ireland of the electric welding products of Messrs. Buckley, Saunders & Co., Ltd., Princes-street, Westminster, and Birmingham.

We are informed that the Jury of Award at L'Exposition Internationale des Arts Decoratifs et Industriels de Paris, has accorded the "Diplome d'Honneur" on four pieces of furniture that are being shown by Messrs. The Bath Cabinet Makers' Co., Ltd., in the British Pavilion, all of which were designed by Mr. C. A. Richter.

Messrs. Leech, Brain & Co., of Glaucus-street, Bow, London, E.3, have sent us particulars of their new B.T.M. welded tank, which is welded throughout and has therefore no holes punched in the plates to weaken them. This implies a double advantage, for not only is the tank stronger than one which is riveted, but the absence of rivet heads eliminates a prime cause of corrosion. Another improvement is that these tanks are made watertight before being galvanised, whereas riveted tanks are made watertight through the galvanising.

We have received from Messrs. C. S. Johnson & Sons, Ltd., of West Drayton, Middlesex, a copy of their booklet, "The Proper Treatment for Floors, Woodwork, and Furniture," which sets forth the uses of the firm's various woodwork finishes and allied products, which include polishing wax, varnishes, enamels, undercoats, dyes, fillers, and flat wall finish. The booklet gives full particulars of methods of application and of the varied artistic effects to be obtained. Some of these latter are shown in some excellent coloured reproductions. We would draw the attention of readers to Messrs. Johnson & Sons' advertisement in this issue, which contains a coupon offering to all applicants a half-pint size of their wood dye free of charge.

Hertfordshire Town Planning.

The Joint Regional Town Planning Committee have decided to appoint Mr. W. R. Davidge to prepare a scheme of regional planning for the county of Hertfordshire.
